132 Ol dumeril, that is, the time of little rainfall, which precedes the great rainy season. This falls in the eñ gokwa, named after the Pleiades, which then rise low on the western horizon.

/160/ Then follows the ol airodjerod, the season of the lighter after-rains, and then the ol ameli, the period of hunger, of drought.

The months of ol dumeril are: 1. ol gissan, in which the goats and sheep bring forth young; 2. ol adallo, that is, the heat of the sun; 3. ol golua.

The months of en gokwa are: 1. ig erat, formed from er rata = green valley. The rain, which has fallen meagerly up to now, has been sufficient to cover with fresh green the valleys and deeper lying places in the otherwise still yellow, dry steppe. 2. os somisso, the dark, gloomy one. The sky is cloudy, it rains a great deal, the days are gloomy and dark. 3. ol nerierua, formed from nerneri = fat; the cattle soon become fat because of the young, fresh grass.

/163 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the smashing of the spermatic cords with the club between the wood and string of a bow (a-idón). The testicles are not removed, but are left to atrophy. In the same /164/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always [825] not until they are fully grown. Bulls and bucks with unnatural sexual [777] instincts are slaughtered as soon as the vice is noticed, since they [784] are regarded as bringing bad luck. It is believed that, as a result of [731] their behavior, they bring the punishment of God upon the herd in the form of an epidemic.

231 The donkeys are small, square-built, strong, and steadfast. With nicely arched cruppers, a rounded neck, firm and fleshy shanks, they are very similar in shape to the zebra. Their coloring is a uniform light gray with a black cross over the back and shoulders. [492] They serve only to carry burdens, whereas oxen are only rarely used.

Naa, ten ŝŝ en-ginyi-kerai, neitau 'ñgotonye ake 'n-dikitin.

If a baby dies, its mother only lays aside her ornaments[1]. 765

Il-tauja oo 'l-menefiga[2] loo-'l-tuñganak, oo 'l-asuria.

People's souls and spirits, and snakes[3]. 775

Teu etaa en-nŝŝ ol-tuñgani, nêji etaa en-nedufigo ol-tau lenye. Naa, ten ŝŝ ol-tuñgani, ore p' einosi, nŝŝ sii ol-tau lenye. Nêji eidipi anaa 'n-giahu: meitôki ol-tau apin.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4]. [763]

Kake ten ŝŝ ol-oiboni araki ol-karia, nenukari, ore pe eligwtyu o-esen lenye, nêji etawale ol-tau lenye, etaa ol-asurai; nelo ol-asurai eng-aig oo-'n-gara enyena, neiligurua.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them. 766 795 825

Ti-araki naa nêja, pe mtar il-Maasai 'l-asuria lenye. Naa, ten edol i-figurtyuk ol-asurai ti-aji, nenaki kulla, nemej ol-asurai, nelo.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away. 798 825

Etii 'l-asuria ooruok, naa le-'n-giahtini oo-'l-Aiser; naa, ten ŝar likae etii 'l-ompeny, nêjo: 'Miar, anua 'l-kulalañg.'

There is a black snake, which is sacred to the Aiser clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them. [764]

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Schilderungen*, pp. 130, 132; and *Stein Funke in Central Africa*, p. 338, &c.). [791]

[2] Ol-tau, the heart, mind, soul; ol-menefigani, the corpse, spirit, ghost. [792]

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 107, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 55; Casati, *Ten Years*, p. 32; *Stein Funke, loc. cit.*, p. 339, *&c.*). The *Zulus* hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 231). [793]

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 124, 188).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

778 825 Eata sii en-giabtini naji l-Tartisero l-asuria lenye sambu. Naa, ten tarare el-tulgani loo-l-Tartisero ol-likae, pe meitu, neipot l-asuria lenyena, ntjo: 'E-ele e-'ng-aji e-ytyo, talakunye!' Naa, ten eitu ekwet lido tarare, nepwtuu, l-asuria aaony.

The Tarisero family have their own particular snakes, which are of many hues; and when a member of this family fights with some one and gets the worst of the combat, he calls upon his snakes, and says: 'The avengers of my mother's house, come out!' If the man with whom he is fighting does not run away, the snakes will come and bite him.

[614] Eata sii kulye-ebomito l-asuria lenye. Etii l-asuria eolbor, netii l-oonyukye, netii sii l-oonyori. Etii l-kulikae oosta en-diki netii e-murt anaa el-kila lo-l-mdruo, neiber kulikae l-laghony anaa el-mdruo kitok.

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Eji sii eata l-olbunk l-kulenyena eotii el-bene.

The medicine-men are also said to have snakes, which they keep in their bags.

766 795 791 Naji ten ti kulikae-tulgunak kitnak anaa 'M-Batyany, ere pe eunkari, nepwo l-tauja lenye eng-ai.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 838 Ten eirura el-tulgani, nemebuaki likae-tulgani sinytye. Einytye ahini, anaa eji: 'Ehaiki meidim el-tau lenye sinirinyunye, ntii.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

795 825 Ejo l-Maasai metii l-menetiga, anaa mudui; kake eji edui in-giabu, naa ten eilgurua 'n-gtuku jukin e-wejii ntiu, nejii edui il-menetiga arabi el-tiwara.

The Masai say there are no such things as ghosts because they do not see them. But it is supposed that cattle see them, and when a herd of cattle all gaze at one spot, they are said to be looking at either a ghost or a beast of prey.

FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngäi, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngäi. My lamp was Ngäi. Ngäi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngäi. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 834 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the dress, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—*cleanliness* being ensured by woodashes. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

885 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

545 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the day closed for both of them, and one after the other, they 764 formed the subject of horrible hyenas' laughter. These fierce

9:Foxbrooke G-5 (1936-1948) 1948 FL.12 Masai FL.12
Kisonko

79 success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonial affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes, and is the sense in which the word is used throughout this paper, unless otherwise indicated.

It is very possible that the office of laibon developed by progression through the three stages outlined above. It may further be assumed that the process took two or three generations to complete, before the laibon was fully installed in a position of power. For this reason the immediately pre-European conception of the office was not as old as the genealogy would at first indicate.

It is possible to quote examples of practising laibonok, representing each of the three types of medicine man. Any number of the Engidong clan is credited with a certain amount of supernatural power. Not all exercise their gifts, but as an example of one who did, Kakenya, murdered at Longido in 1939, may be quoted. In addition to the Engidong clan, [54] [77] [56] however, numerous aliens, particularly Kikuyu, often build up reputations as private practitioners.

Of the second type, those who cater for various groups, the example of Oruma (22) springs to mind. He probably exercised 'group' functions in the supply of charms for cattle raiding, but was brought to book when he tried to usurp the privileges of the elders in the matters of tribal ceremonial. Tuiko (18) was doubtless another member of this class, supplying raiding medicine to the moran of the Longido area. Both these people are of the Engidong clan, but as an example of one who is not, one can quote ole Shunga, of the Ngorongoro Highland area. [56] He is a Kikuyu, and his activities are not fully understood. He was believed responsible for a series of raids in 1933, and has still got a reputation, known beyond the bounds of his particular area, as a powerful laibon.

The third type, the acknowledged laibon of the tribe or group of sections, must always be a member of the Engidong clan. One frequently hears that in olden times all the Masai acknowledged one laibon, but Mbatian (9) had a fellow practitioner, if not a rival, in his brother Mako (10), and it is more than probable that many other figures, important competitors to the known holders of office, have been lost in the mists of antiquity. The phrase "all Masai acknowledge one laibon" requires also a further qualification, as the rival sub-tribes, Uasingishu, Kwavi, etc., had their own medicine men.

The office is hereditary, insofar as the holders must be members of the Engidong clan, and preferably close relatives of the deceased laibon. More distant relatives confine themselves to activities of the two inferior laibon types. There are, however, no definite rules of succession, the

/310 cont./

766 stamped down firmly so that hyenas will not be able to dig up the
767 grave. The chief's grave, as well as often the graves of the El
613 kiboron old men, are crowned with a larger or smaller stone mound.
769 Later, as a sign of veneration for the dead, Masai passing by will
768 throw a few bunches of grass on the latter, whereas on the former,
which is regarded as sacred, they from time to time pour a little
milk as an offering.

766 Concerning the burial of Mbaryan, his son Zendeo told me the
791 following: When the ol oibonI died, his large bodyguard was gathered
around him, and immediately warriors set off in all directions, in
order to bring the sad news to the kraals lying far from one another.
From everywhere Masai came streaming in, the relatives of the
deceased all appeared, down to the smallest infant. Every mourner
brought a few fat-tailed sheep along, which, after a large herd was
assembled, were slaughtered. Meanwhile the corpse had been laid
out on a neat's skin. Beside this the closest relatives laid their
leather aprons and others added theirs in a line ca. 100 paces long,
the aprons being placed so that they formed a channel. Now the
boiled-out fat was poured on the corpse and flowed along the channel.
Then the body was buried, whereupon all the people brought grass
and heaped a pile several meters high over the grave, which was
then covered on the sides as well as on top with layered stones. In
contrast to this description, there is a rumor circulating repeatedly
among the people, according to which Mbaryan, several days before
his death, in a state of mental derangement, is supposed to have
secretly left the kraal at night and wandered about in the steppe,
without the men of his guard, who had followed him, being able to
find him. Then, when he was found on the fifth day, he was dead
and his body already decomposed.

768 If in one kraal several young people or even children have died
of some illness within a short time, it is abandoned, first because it
is regarded as unlucky, but then also /310/ to enable the survivors
to forget the sad event more easily. In such cases of death one can
always observe deep sorrow among the relatives, whereas the death
of old people, even one's parents, is accepted more calmly. "The
old ones are now resting, they sleep, their time has come."

/314 cont./

[623] [611] [672] [673] revenge goes first against the murderer or, if he has fled and is not available, against his brother or any man of the family of the murderer. Usually blood revenge is commuted by composition (weglid), the amount of which the murderer negotiates with the avenger through a friend. As a rule it consists of 300-500 cattle -- now fewer in many cases -- which the murderer, together with his people and his fellow lineage and tribal members living in the vicinity, that is, in the same district, gather together. The avenger is free to accept or reject the composition. /315/ Blood revenge is not carried out longer than one or two months after the murder; composition then takes place.

[613] [614] The kraal of the el ollomi is regarded as a place of refuge. If the murderer has confessed his deed here, blood revenge may no longer be carried out on him, though he remains obligated for the payment of the composition. Murder committed on a married man, a girl, or a woman is never expiated by blood revenge, but by a fine. Until the payment of the composition or fine the murderer is called el ollohani (pl. el olloh). The murder of a blacksmith is unpunished. [606] [604] On the other hand, if a blacksmith murders or even only negligently kills a Masai, a band of Masai consisting of married men, warriors, and boys immediately sets out to kill several blacksmiths.

[677] [613] [672] Negligent homicide is expiated only by fines. These are very minor if the perpetrator and the one killed belong to one lineage. If they belong to different lineages of the same tribe, every male member of the lineage (warrior, married man) and every married female member of the lineage must pay a cow. Of this livestock the brother of the one killed receives one half, while the other half [614] is distributed equally to his fellow lineage members. The fine is paid and distributed analogously if perpetrator and victim belong to different tribes. If a woman kills a man through negligence, she will also be killed in most districts. On the other hand, if a man has killed a woman, he either remains unpunished or is given a beating by the brother of the woman killed. In a few districts no [677] [613] [614] distinction is made as to whether the perpetrator acted intentionally or negligently, for example, in Laikipia, where blood revenge is also [672] [628] only very rarely used.

/112 cont./

564 326 [192] [784] [578] because he thinks a misfortune will be conjured up by it: it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kononi" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 326 779 829 [783] The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous: if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 197 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1905, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them who know it." This statement by Hollis is ex-

[563]

the wives of the blacksmiths. Smaller ornamental objects of wire are made by the other Masai women. The small chains of iron and copper wire are not made by the Masai themselves, but are bought ready-made from the caravan people or the sedentary neighboring tribes.

XIV.

Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Masai in the service of the European. -- Attitude of the Masai living among his people toward the European. -- The Masai toward their kind. -- Hospitality -- Position of the woman. -- How the Negro illustrates the character of the Masai. -- Expression of emotions and other gestures. -- Strength of vision. -- Art sense. -- Color sense. -- Orientation ability. -- Song. -- Ideal of beauty of the human body.

The most outstanding trait in the character of the Masai is their national pride which is based on the religious view that they are the chosen people of God. God created the world and all that is in it only for them. All non-Masai are subject to the Masai people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with 'Ng ai and have no share in the good things created by him and who therefore are condemned to wrest their daily food from the soil in the sweat of work. On the other hand, God cares for the Masai as for his children, they need not work "ol dokiro ndoi nidai" - work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Masai take it by force. In fact, the Negro, in the opinion of the Masai, only has justification for existence as keeper of the livestock created by 'Ng ai for the Masai.

In general the Masai designates all non-Masai as ol mag (sing. ol magi), a term that is to be translated as "unbeliever." /117/ The Masai does not know friendship and loyalty toward the

/203 cont./

XXI.

000 Religion. -- Monotheism. -- Religious doctrine. -- Explanation of natural phenomena. -- Prayers. -- Supplication feasts. -- Sacrifices. -- The snakes. -- Evil spirits. -- Sorcery. -- Amulets. -- Evil eye.

[177 In a comparison of the ethnography of the Masai with that of the
177] peoples neighboring them, living around them, no chasm as deep as in the field of religious outlook appears anywhere. Whereas in almost all the areas of ethnography we otherwise find a more or less strong influencing of the latter by the former -- from more external things, /204/ such as ornaments and weapons, to more deeply incisive social changes, such as, for example, the shaping of warriordom after the Masai model -- the religion of the two shows a sharp separation, which nowhere permits any interplay of the one in the other. In sharp contrast to the anthropolatry, the worship of departed human spirits, and the polydemonism of the Negroes, occurring in all forms and gradations, stands the simple, straightforward monotheism of the Masai.

176 Their god is called 'Ng ai and is an immaterial being, a spirit.
177 The people do not think about his appearance. The making of pictorial or sculptural representations of God would be a sin, according to his commandment given to the Masai. God is the creator of the world, the earth, and all that it harbors. He governs everything through his will. He is the guardian of the natural and moral order of the world. The laws and commandments that are valid to the life of the people and of the individual are expressions of his will. God is almighty, omnipresent, omniscient, benign, infinite, eternal.
[177] 'Ng ai nainile = God knows it. 'Ng ai nainkg ai dolgonak, 'a dogitie ildon = God gives human beings the good things. ai bai 'i 'Ng ai = it is the will of God, are words that one can hear every day, and they are not often used thoughtlessly, for a deep religiosity is peculiar to the Masai generally. God's benevolence forgives human beings a great deal and for a long time. Yet human beings are too weak and sinful, so that God has to punish from time to time for

/204 cont./

776 779 improvement. He then does this through sickness, drought, or cattle epidemics.

779 781 (786) The Masai feel that they are the chosen people of 'Ng ai; all other peoples should be subject to them. God created the world with all that is in it only for them, and thus everything on earth belongs to them. If they obtain booty in war against another tribe, they are only taking what has been given to them by God for their own, what lawfully belongs to them, and what that tribe is unlawfully withholding from them. "If the ai ngg would voluntarily give us our property, for that is what the livestock in their possession is, we should not have to make war on them. But since they do not do this, we are forced into war." And they are constantly waging this war against the despised, savage heathen, who know nothing about 'Ng ai and do not pray to him, but to spirits, which is why he does not assist them and always makes the Masai victors for a worthy cause.

776 779 In their journey through life God protects the Masai through guardian angels, who are pictured as winged, invisible beings of human form. The guardian angels are the same sex as their protégés: a male individual has an ol dukgani l Ng ai, a female one an ok gwejani Ng ai, watching over them. The angel accompanies the person always and everywhere and protects him from dangers, so that he will not succumb in the struggle for existence before the lifetime previously set for him by God has run out; only then does the person die. The angel carries his soul /195/ to the other world and then (195) undertakes the protection of a child born on the same day. Every day a Masai dies and every day one is born, the people say.

775 779 Into the other world (ol gwanthé = cloud land, i.e., the land where the clouds come from) go the souls of all the deceased, both those of the Masai and of non-Masai, both those of the good and those of the bad people. As soon as a soul reaches the portal of the other world, which lies far to the north (Kapelelé), God decides its future fate. The souls of good people gain entry into paradise, which is equipped with all the beauties and splendors of nature. Lush pastures with fat cattle alternate with lakes, rivers, and cool glades whose trees bear the most delicious fruits. In the midst of this splendor the good souls live in human fashion, but without care, trouble, or

/305 cont./

915 work. Every day they receive the best food in abundance. Here,
• 919 however, in accordance with God's command, each one may marry only one wife. The other world, like the earth, is divided into individual lands, each of which is intended for the souls of one people, so that the person who arrives there will find his deceased relatives. Bad human beings are denied this paradise; they are driven into a barren, waterless desert. Those not so bad also gain entry into paradise through God's grace, though not to live in carefree happiness, but to do hard work.

919 This is the Masai religious doctrine as it is handed down and taught by the old men. The supernatural explanation of natural phenomena has nothing to do with the religious doctrine. In them one sees only the works or expressions of God and therefore observes at least the more powerful ones with something like reverential awe. It should be expressly emphasized that it is only a matter of this and not, say, demonstrably, the deification of personified natural forces.

[921]

916 The sun (eng ainé) is regarded largely as a reflection of God,
921 like the gloriously colored morning and evening rainbow. The clouds mask God before the eyes of mankind, they surround him. Even there he looks down on the bustle of the earth. This seems to explain why the Masai call the redness of the morning and evening sky 'Ng ai naingi, the clouds 'Ng ai nabor, and the blue, cloudless sky 'Ng ai nanyi. These literally mean "the red God," "the white God," and the "black God," but should properly be translated as "the divine red," "the divine white," and "the divine black," for actually the people see in these phenomena no gods and nothing godlike or to be worshipped like him. It should also be mentioned here that God, who in ordinary speech is always called 'Ng ai, is often called 'Ng ai nanyi or Nai nanyi, that is, the black God. In the prayer songs to be discussed later. The Masai themselves do not know any explanation for these strange word-formations, and I have not been able to learn anything from them from which an interpretation could be derived.

/306/ More infrequent than the above explanation for the sun is the one that it and the moon are servants of God, whose duty is to illuminate the earth. In this the sun is regarded as feminine, the

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

frequently fighting, contact must have been limited. But that is not the case to-day. When Mbeiya's boma was infected with measles in 1935 he hired a lorry and himself travelled to Nairobi and beyond, bringing back a Kikuyu medicine man to cleanse his boma for him. Kutata (24) is reputed to have obtained a charm to kill Mbeiya from a Sukuma witch doctor in Pare, and Letinga (25) and Balosi (28) hired a car to go and interview this doctor, in order to verify the rumour and/or to obtain charms stronger than those given to Kutata.

The cult of the laibon must therefore have much in common with the beliefs and practices of neighbouring tribes, and I put it forward as a possibility that, with further contacts, the institution may eventually end up merely as an instrument of common witchcraft.

In the absence of rational scientific explanations for the many natural phenomena which surround them, — drought and disease, fecundity and sterility, birth and death, — it is natural that the Masai, in common with all other primitive peoples, should regard the unseen with deep fear and awe, and grasp at any opportunity offered which purports to control these mysterious factors in their lives. They believe the laibon to be capable of controlling these unseen forces; he is the intermediary between themselves and the supernatural. His blessing will assure prosperity, his charms and rituals can alleviate an existing calamity, and his power of foretelling the future enables steps to be taken to ward off an impending catastrophe.

It is extremely difficult to ascertain the strength of these beliefs amongst individual Masai, but it is considered that the majority of the Kisongo hold them implicitly. Some areas, e.g. Kibaya, have a reputation for consulting the laibon more frequently than others, but none the less the beliefs are general. The practice of the ritual may fall into temporary abeyance in certain areas, but the belief remains, and manifests itself in outward form on the advent of a drought or of a personal reminder from the laibon. Modern contacts have as yet done little to shake these beliefs. A few Christian Masai are completely sceptical; others may have their doubts, but when the occasion arises feel that they had better do what they are told, 'to be on the safe side'. One of the chief factors which guarantees the maintenance of these beliefs is the age grade system. From early adolescence the future leaders of the tribe, the laigwenak and ingabir, are frequently taken to the laibon by their guardians, the il piron elders. The lengthy discussions beforehand, the actual journey, the reverential attitude of the elders to the laibon, the ritual, the mysterious voice in the darkened hut foretelling the future, all these must make a deep impression on the youths. This in turn is spread to the rest of their age-mates when they return home and perform the ordained ceremony.

There seems little doubt therefore that so long as the age-grade system is maintained in its present form these beliefs, and the consequent power they give the laibon, will be perpetuated. True, as education progresses, this power will decrease, but disbelief will dissociate a youth from his age-mates, and consequently his influence on others will be small, as the

/305 cont./

715 work. Every day they receive the best food in abundance. Here,
719 however, in accordance with God's command, each one may marry only one wife. The other world, like the earth, is divided into individual lands, each of which is intended for the souls of one people, so that the person who arrives there will find his deceased relatives. Bad human beings are denied this paradise; they are driven into a barren, waterless desert. Those not so bad also gain entry into paradise through God's grace, though not to live in carefree happiness, but to do hard work.

719 This is the Masai religious doctrine as it is handed down and taught by the old men. The supernatural explanation of natural phenomena has nothing to do with the religious doctrine. In them
• [781] one sees only the works or expressions of God and therefore observes at least the more powerful ones with something like reverential awe. It should be expressly emphasized that it is only a matter of this and not, say, demonolatry, the deification of personified natural forces.

776 The sun (olg olok) is regarded largely as a reflection of God,
821 like the gloriously colored morning and evening rainbow. The clouds mask God before the eyes of mankind, they surround him, from them he looks down on the bustle of the earth. This seems to explain why the Masai call the redness of the morning and evening sky 'Ng ai naniugi, the clouds 'Ng ai nabor, and the blue, cloudless sky 'Ng ai nanyk. These literally mean "the red God," "the white God," and the "black God," but should properly be translated as "the divine red," "the divine white," and "the divine black," for actually the people see in these phenomena no gods and nothing godlike or to be worshipped like him. It should also be mentioned here that God, who in ordinary speech is always called 'Ng ai, is often called 'Ng ai nanyk or Nai nanyk, that is, the black God, in the prayer songs to be discussed later. The Masai themselves do not know any explanation for these strange word-formations, and I have not been able to learn anything from them from which an interpretation could be derived.

/306/ More infrequent than the above explanation for the sun is the one that it and the moon are servants of God, whose duty is to illuminate the earth. In this the sun is regarded as feminine, the

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

(especially rain, the sky, and volcanoes), or else definitely and personally of superhuman beings. In this latter sense it is said that there are two Gods (Ing-aitin ave), the Black God and the Red God, of whom the former is kindly, but the latter malevolent. It is the special function and pleasure of the Black God to provide rain, but the Red God objects to turning on the celestial water-tap. Loud thunder is the result of the Red God trying to get to earth through the Black God's dominions in order to kill men, but the distant rumbling is the Black God saying to him, 'Do let them alone; don't kill them.' This happy fancy that the good god is near but the bad god far, which is probably no accident but due to the fundamental characteristics of the Masai mind, has doubtless saved untold suffering, for it does away at once with the necessity for human sacrifices and all similar methods of propitiating cruel powers. Besides the Black and Red Gods there is a quasi-divine personage called Naitoro-Kop, who appears to have been, if not the creator, at least the arranger of the present order of things. A man called Le-oyo appears to have been the principal patriarch, though there were also Dorobo (hunting tribes) in his time, so that he was not strictly the first man. Death entered the world owing to his selfishness and disobedience (p. 164), and, by an incident common in stories of this kind, his younger son became the father of the Masai, while his elder son lost his birthright, and was the ancestor of the inferior tribes.

The worship of the Masai, like their beliefs, seems to be somewhat vague and wanting in ceremonial, but Mr. Hollis's collection shows that they have definite prayers, and that they petition the deity more frequently and fervently than the surrounding tribes are known to do. This is confirmed by Thomson, who speaks of them howling out prayers to Ing-ai for hours together. By a custom not without parallel in other nations, it would appear that the women pray twice a day, but the men only occasionally and in grave circumstances. The prayers which are for children, rain, and victory, are addressed to Ing-ai as a distinct personality 'who is prayed to and hears.' Remarkable also is the phrase 'the highlands and lowlands of our vast country which belongs to our God.' On the other hand, the sun and moon, the morning and evening star, and the mountain clouds are also invoked, and one song says in two successive verses, 'He whom I pray to is God,' and 'He whom I pray to is Lenana, our medicine man.' It is difficult to say whether

three others, which pursue them from the left, called The widows[1].

Now the Masai say that as the widows have lost their husbands, they are waylaying the old men in order to get married to them.

There is also Kilaghon (Venus), and by this planet the Masai know that it is near dawn. It is in consequence also called The star of the dawn.

Women pray to Venus when warriors tarry in returning from a raid.

Then there is Leghon (Venus), which when visible is a sign that the moon will shortly rise. Leghon remains in the west, and is only seen in the evening[2].

Ang-ałg o-'l-epu o 'ang-ełłai[3].

A halo round the moon, and the milky way.

If the Masai see a halo round the moon, they say that a place has been attacked and many cattle captured. The halo is supposed to represent the cattle kraal.

Then again, if they see the red which crosses the sky (the milky way), they say that this is the road by which the warriors are taking their cattle.

[1] Orion's belt.

[2] The Masai have two names for Venus, Kilaghon when seen in the morning, and Leghon when seen in the evening (cf. Lucifer and Hesperus, the morning and evening stars of the ancients).

[3] Lit. the moon's kraal and the road.

has a cow, which he looks after and tends, it bears, and by so doing enables him to live, for he can marry, and have children, and thus become rich.

Now cattle feed on grass, and the Masai love grass on this account.

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God.

If a warrior beats a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign.

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them.

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle.

Again, if a man who is proceeding on a journey sees a tree which has

Songs.

A prayer to God[1].

Masai women do as follows when one of their number gives birth to a child.

They collect together and take milk to the mother; they then slaughter a sheep, which is called, The purifier of the hut, or simply The purifier.

The women slaughter the animal by themselves, and eat all the meat.

No man may approach the spot where the animal is slaughtered, for it is considered unlawful.

When the women have finished their meal, they stand up and sing the following song: [539]

[1] Masai women often pray twice daily. Men and children usually only pray in time of drought, or when a cattle plague is raging.

Solo. The God! the God! whom I pray, ay,
Give me the offspring.
Who thunders and is rains,
Chorus. Then every day only I pray to thee.
Solo. Morning star which rises hither,
Chorus. Then every day only I pray to thee.
Solo. He to whom I offer prayer is like ships,
Chorus. Then every day only I pray to thee.
Solo. Who is prepared to, and He knows.
Chorus. Then every day only I pray to thee.

Free Translation.

I

My God, to thee alone I pray
That offspring may to me be given.
Then only I invoke each day,
O morning star in highest heaven.
God of the thunder and the rain,
Give me unto my suppliant strain.
Lord of the powers of the air,
To thee I raise my daily prayer.

II

My God, to thee alone I pray,
Whose mercy is no passing event
As only element lacks display,
Thy blessing daily I entreat.
Then hearest when I pray to thee,
And listenest in thy clemency.
Lord of the powers of the air,
To thee I raise my daily prayer.

* This line is sometimes rendered Pumni leiadwa. Pumni is another name for God. Gi-leiadwa is Swahili-Arabic compliment, Kwili.

Ore ten eriayunye 'l-mereu te-'n-jure, ye ebukki te-'n-metauna 'ng-ikgite enye, nenny epwu, ntjo:

Epwu'ng-aiyuk ing-oriikgi.
Kiselie tee-'l-ikgatunyu.

Yite epej! Yite epej!

Yite epej! Yite epej!

When warriors return from the wars, they sing the following song on approaching their kraals:

Solo. The milkmen go behind us.
We have conquered with the head-dresses of the lion's mane.
Chorus. You! I burn! You! I burn!
You! I burn! You! I burn!

[1] The sun.

fire as a symbol of the new relationship between the elders and the candidates.

The next stage of *Endungure-Enpibeta* is the election of the unit leader (*aiguenani*). This office is not popular with the boys, [33] and the election is kept as secret as possible from the person concerned. It is not very clear whether the election rest primarily with the boys or with the elders, both have a say in the matter since it is of common concern. [34] The selected person is chosen from the so called *ingopior*, i. e. "those who have shown ability and strength of character during the many debates already held" (WHITEHOUSE). This indicates that he must be a man of talent and personality. Some consideration is also given to the clan and family from which he comes. [35] The appointment is forced upon the boy, but only after the approval of his family has been obtained. The insignia of the *alguenani* is a black club, which is presented to him by the leader of the elders. Prayers are also offered for the new elect. [782]

The naming of the age-unit takes place now with great solemnity. Not all the candidates are present but only a few of them. [36] These are called *mejengema*. They take part in the ceremony dressed up in full regalia and painted with red clay and chalk. [37] [302]

On the following day a great sacrifice of two bullocks [38] is also

[33] For the same reason given for the *ol epolos*.

[34] WHITEHOUSE states that "the names of possible candidates are submitted to the *ol-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves". On the other hand FOX, *l. c.*, p. 450, states that in the first instance the nomination is made by the elders, and if the candidates are dissatisfied with him they may ask for a change. MERKER, *l. c.*, p. 61, states the boys elect one of their member.

[35] Particularly, he must not be a member of the *Enpidonpi* clan, the clan of the *loibon*. [614]

[36] According to DAWSON, the *mejengema* must be 49 if the ceremony is for the 'right-hand' unit; 48, if the ceremony is for the 'left-hand' unit. These boys must be pure Masai, and must never have killed a Masai.

[37] "The *mejengema*", writes DAWSON, "assemble in the middle of the village and the *Aiguenani*, having poured honey beer into a trumpet made out of a *kudu* horn, blows two blasts on it and shouts the name. There is no answer as this name must never be mentioned by anyone. He again blows the horn and shouts out another name and is answered by a shout of 'Ho' from the *mejengema*. He again shouts out the name and is again answered by a shout of 'Ho'". The name is later announced to the other candidates by the leader and the *mejengema*. [534]

[38] The sacrifice of the bullocks (one must be entirely white, the other entirely black!) is ended by great ceremonial. The two beasts are smothered and [782]

I: Bernardi E, M-4 (no date) 1955 FL.12 Masai FL.12

[91] [92] solemnity performed. The festival lasts three days, during which none of the candidates are allowed to leave the place. It is only at the third day that they remove all decorations and are allowed "to cross the stream".

The fourth day after the sacrifice, all candidates are informed by their leader that they are free to return home, and on doing so he warns them that they must be honest and loyal. With this *Eudungore-Baplitsia* is over.

The relationship between the elders and the candidates, the *il piron* relationship, offers a special subject of analysis.

As stated above, the elders in question are members of the class next but one above the class to be formed by the initiation of the candidates. The gradation marking the two classes perhaps offers the clue to discovering why the sponsors of the candidates must be members of a definite class. We know from the rhythm of Masai class-system that the class next but one above the class of the candidates is generally the class of the fathers of the candidates. The [554] *piron*-elders, therefore, possess the same social status as the fathers of the candidates. Hence, being on the same social level, the *piron*-elders possess the social capacity to be sponsors for the candidates. Such sponsorship brings about a mutual relationship between the two classes, a relationship respected by members of the classes concerned throughout their life.

The *piron*-elders have a real authority over the candidates so that no ceremony connected with initiation may be started by the candidate without the approval of the elders. The *piron*-relationship is officially established at the *Eudungore* ceremony."

[70] their blood is drunk in turn by the *mojungore* and all candidates. Then two of the elders smear the face of the candidates with the bullocks' heart. The elders must be of the 'right-hand' unit, but they are assisted by two of the 'left-hand', who take their place when they are tired. The meat is distributed among the elders (if warriors, i. e. the last initiates, are attending, they are not supposed to be seen eating meat in public), and the usual sacrificial bits-rings are prepared for all those present. All the time the bones of the animals are watched to prevent stealing for the purpose of magic, and finally they are burnt out and all the remains buried underground.

" That the *piron*-elders take a strong view of their power is shown by a case reported by FORSBROOK, pp. 18 s. In February, 1938, after *Eudungore* had been performed, " a *Duoni* elder (i. e. senior elder, member of the class next but two above the candidate of the time) decided to circumcise his two sons, and brewed beer in preparation for the event. The local *Duoni* (the *piron*-elders), hearing of this, determined to stop him, marched into his home (vil-

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

great political importance, in reply to which the elder indicated that such did not necessarily follow as "we can always tell the leaders what order to give". [541] [534]

c) The sacrifice of a bull is then performed with great ceremonial. HOLLIS,[**] describes the contest in which the candidates compete in getting hold of a horn which was previously thrown into a fire. [542]

With reference to this sacrifice a special officer is appointed. He is called *ekewenges*; he has a ceremonial status and must prepare the hide-strips from the skin of the bull. He is also described by the author of *MS.* 48 as "the official charmmaker of the *morus*". His function, however, seems to be limited to *l'ensin*.

Great emphasis is laid by WARYNGOUNI,[***] on what he calls "the fire-drilling ceremony", which as Fadbrooke also says, "must in fact be the *ensin*". The ceremony is described by Whitehouse in connection with the first erection of the segregated village of the initiates or *emapulu*.[****] [521]

The fire is ceremonially lighted by the elders, and it must be carried into the new dwellings of the village. The next morning after this ceremony, the candidates who have become senior initiates are blessed, and prayers to the black God are offered for them.[*****]

At the *ensin*, the *ewaon* first, and then the other initiates, shave their hair. Pig-tails, however, are again fitted after the ceremony. [544] [720] [541]

Some (four or five) months after the ceremony, when the senior

[**] HOLLIS, *l. c.*, pp. 300 sq.

[***] WARYNGOUNI, *l. c.*, p. 163.

[****] This circumstance supports HOLLIS's statement that one of the privileges demanded by the junior initiates is the building of their own segregated village, *l. c.*, pp. 30 sq.

[*****] It is of some interest to reproduce here from WARYNGOUNI, the prayer recited by the elders on this occasion. It shows clearly how the senior initiates are about to enter the most important stage of their life as members of Masai society. This is the prayer: "Be trustworthy, Oh, return safely, O God. — Become ye cure and of God. — May the illness pass you by. — Wish those who hate us that they may find dry river on their journeys. — Lenana and Sabit and Mbatian wish the safe return. — Grow up. Become possessed of wise heads. Become as great as the Kilimanjaro. — Be the fathers of my children, and bring them up well. Have many wives. — May God love you. May the red bull of the night guard thee. May our age be the bravest". The expression of the first verse "return safely" probably refers to the raid which follows *ensin*. Lenana, Sabit, Mbatian were prophets. [721]

2: Bernardi E. M-4 (no date) 1955 FL.12 Masai FL.12

[561] c) That the killing of the bull is a religious sacrifice is shown
[562] by the fact that the bull is killed in a ceremonial way, i. e. by suffocation.*** Prayers are also offered to God, and ceremonial bleedings from the bull's skin are distributed to all those present.

d) At first sight the ceremonial fire gives the impression of being inconsistent with this ritual pattern. It serves to destroy the horns of the sacrificed bull, and it is also produced at the foundation of the village of the initiates (*manyatta*). The importance of this ritual element, however, becomes evident if we compare it with the so called *piron* relationship. *Il-piron* is the firestick used for producing new fire. The breaking of a similar stick by the *piron*-elders is the main rite of *Endungpuro*, and the elders and candidates when they visit the prophet say: "This is our fire-stick, we are one".***

[563] Against the background of the above patterns, individual initiation, in the way it is now performed, i. e. by circumcision, seems to stand apart and follow a pattern of its own. This dissent is somewhat striking, and one may be permitted to hazard the opinion that circumcision as such is foreign to the age-system of the Masai. Indeed, the structure of the age-system as such has no direct connection with individual initiation.

[564] *The Overlapping Rhythm.* Discussing the interval between the various ceremonies which institute the age-units we accepted the period of seven years as a good though vague, approximation. On that basis we may now assume that fifteen years is a parallel approximation of the interval between the institution of two age-classes.

The inaccuracy of any numerical computation with regard to Masai age-system is emphasized by what we call the overlapping rhythm.

Up to this point the age-class has been considered absolutely, i. e. without relation to preceding or succeeding classes. In fact the actual institution of a class is related to other classes, and especially to that class immediately preceding and the one which follows immediately. Similarly one age-unit is related to the unit next above it and the one next below it. Let us consider the phenomenon by focusing attention on the left-hand unit. This is the second of the two units of a class, and the junior of the two. As

F112 Maori F112

The *Lytoma* is a warrior elected by a number of heads as 724
their captain or leader, with absolute power of life and death.
He is their judge in cases of dispute. He directs their
battles, though, curiously enough, he does not lead his men,
but, like the general of a civilized army, he stands aside and
watches the progress of the fight under the direct command
of the *Lyguami*. If, however, he sees symptoms of his men
wavering, he forthwith precipitates himself with his body-
guard into the battle. Of course he holds his office purely
on sufferance, and if he fails to give satisfaction he is cer-
tainly deposed. This, indeed, is almost the only attempt at
a form of government. Each war-district elects its own
Lytoma. The *Lyguami*, again, is a very different personage. 725
He is the public leader of a kraal, leads and guides the
debate in cases of dispute. To be such eloquent and per-
suasive savages, the Maori are the most remarkable speakers
and debaters imaginable. In some American novels we
have the Indian lauded for his eloquence and dignity; but
commend me to the Maori for grace and oratorical power,
for order and decorum in debate; and, indeed, for most of
the good qualities which in these days are conspicuous by
their absence in our own Houses of Talking. Not that their
genius in this line is always worthily applied; for in their
fatal persistency in talking out a question they might even
beat our Parliamentary Obstructionists. They will spend
days discussing the most trivial matter—nothing, indeed,
can be settled without endless talk. But we must proceed
with our history.

The *Lytoma* and *Lyguami* having been elected, a raid to 726
the coast was determined on. For a month they devoted
themselves to an indispensable, though somewhat revolting,
preparation. This consisted in their retiring in small parties [261]
to the forest, and there gorging themselves with food.
This they did under the belief that they were storing up
a supply of muscle and ferocity of the most pronounced
type. This strange process being finished, and the day fixed
on, the women of the kraal went outside before sunrise, with [782]
grass dipped in the cream of a cow's milk. Then they [515]
danced and invoked Ngai for a favorable issue to the
enterprise, after which they threw the grass in the direction
of the enemy. The young men spent several hours at their
devotions, howling out in the most lugubrious street-singer
fashion, "Amen Ngai-ai! Amen Mbaraiion!" (We pray to
God! We pray to Mbaraiion!"). Previous to this, how-

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

776 In connection with the divided belief of the Masai in a God, it may be noted that they have also some minor deity called Nelterkob—apparently, as far as I could learn, an [794] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngai, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngai. My lamp was Ngai. Ngai was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngai. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 834 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the drum, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—cleanliness being ensured by washing. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

855 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

595 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the 764 day dawned for both of them, and one after the other, they formed the subject of horrible hyenas' laughter. These force

is called an *ol-oswal*. The boys may carry knives for defence but not spears, for it is said that a spear is a sign of force, and their quest is a peaceful one. Each boy must carry a bow, for the bow is a token of peace. Furthermore it ensures that any reasonable request the boys may make during the *ol-oswal* will be granted. No Masai may refuse the request of one who carries a bow in his hand. The boys take no arrows with them. They visit all the principal villages and in dance and song they announce the object of their visit. They then seek out all the bigger boys of the village and add them to their number. If they wish to spend a night at a village they beg an ox for food from the elder of their sponsor's age-group. Elders of older age-groups present them with milk to drink. In this way the news is spread far and wide and finally the boys, now of considerable numbers, return to the elders who deputatled them, taking as a gift a large quantity of honey. Then a special village is erected in which only the boys' sponsors and their families may live. The boys borrow ostrich feathers and lion mane head-dresses from the warriors and on the appointed day they assemble at the elders' village.

The ceremony commences with a dance called *enghoto*; for this the boys form three files, one wearing ostrich feather head-dresses, the second wearing lion mane head-dresses, and a third, of boys who have decorated their bodies with broad stripes of white earth to resemble zebras.

The latter must be quite nude; those who wish may wear tight-bells. They may not carry weapons of any sort, but each carries a thin wand, the length of a spear. After much dancing, the boys form a procession and walk round inside the circle of bois following two leaders, one of whom blows a Kudu horn from time to time. The procession then halts and the leader prays aloud to *Engai Narok*—the Black God, to shower his blessings on the boys. This prayer has been taught them beforehand by the elders, some of whom stand by and prompt when necessary. When the prayers are over, the elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return is then made to the village and the elders bring a fire-stick, the one called *el-piron*, also a male circumcision knife and a small dead bird. This bird may be of any kind other than a dove. The elders break the fire-stick before the assembled boys. They then place a curse upon the circumcision knife and taking the dead bird they break one of its legs and pierce one of its eyes—presumably as an indication of the ill which will befall any boy who dares to be circumcised before the curse is taken off the knife.

In this way, the elders formally lay claim to the sponsorship of a new age-group. From that time the boys refer to their sponsors as *Il-piron*, whilst the elders refer to the boys as *Il-piron*.

shows relationship, as he may—for many days elapse before he is called by the boys and held until he agrees. Other boys set off to relate the news to his family. When the family has been informed the new *ingwenani* is presented with his badge of office called *el kowa* [56] [62]
[illegible]—the black club. This club is made of olive wood. It must be quite straight and unlikely to break easily. It need not necessarily be black in colour. The club is blessed by the *il-piron* elders who spit heavy wine over it; it is then blessed by the *ingopior* boys in similar fashion and handed to the *l'ingwenani*. He too is spat upon in blessing and prayers are offered that he may have strength, wisdom, and long life. Later the boys present their *l'ingwenani* with a heifer and a goat. [72] [73]

If at any time the boys go against his wishes, the *l'ingwenani* may resign by throwing his club to the ground before a meeting of the boys. Should they be dissatisfied with him they may make him resign by taking away his club. They may even take away the heifer if his offence is severe. [29]

When the boys have elected their *l'ingwenani* the *il-piron* elders take him, together with a few boys to visit the medicine man. The medicine man always accepts the spokesmen presented to him, and prepares for him a special medicine called *el-ongwiwyakin*—the red bull. This the spokesmen is made to drink; it is said to preserve him from witchcraft of the medicine men. In addition, the spokesmen is given various charms for the benefit of the tribe. Usually one is to prevent sunburnt in cattle, another to cause the cows to calve freely, another to prevent malaria. Usually the charms are sewn in leather bags and are always accompanied by very intricate instructions as to their use. All these charms must be paid for by those who expect to benefit. An instance was related to me of a ceremony held at Loitokitok in 1938 for which a famous medicine man Sankuyo supplied the charm. Its purpose was to prevent the old men of the tribe from dying until they reached a great age. Sankuyo received 40 heifers and bullocks in payment. The medicine man does not state his price but it is usual to pay generously for his services as he is a dangerous person to offend. [56] [62] [79] [74]

Obtaining charms from a medicine man is not a matter to be undertaken lightly. Those who accompany the spokesmen are always people of proved intelligence and good memory. Charms are always given with much complicated directions as to their use. If any one of the instructions are overlooked the charm may be rendered useless or may even work evil against its users. The Masai sometimes find that their purchases do not have the effect they desire and report the matter to the medicine man; the latter never fails to point out where an error in the method of its use occurred—and probably effects [79] [74]

561 hands. They are followed by the moran and the women who cut bush to mark where the elder has walked. When the circle is demarcated, they set to work to build a thick thorn fence to enclose the village. By the time the work is finished, it is evening. A special piece of olive wood is brought in readiness. The log used is a recent accessory is described as being four to five feet long, and of the thickness of a man's thigh. It had been part of the trunk of a tree, not a branch. A tree bearing in the direction of the rising sun had to be found. When it was cut, it had not to be allowed to fall to the ground.

In the evening before the cattle return, the olive log is brought and one end is placed in the fire. The wood is ——— and as the log burns away it is pushed further into the fire. The mothers of the moran each come with four small pieces of olive wood to light at the fire; this they take to their temporary hut made of bits to start their fires. No other source of fire may be used. Great care must be taken that the log is burnt completely. A close guard is kept over it to prevent the cattle from disturbing it and to prevent evil-wishers from taking away the log to make black magic. The moran guard the log through the night and the morning.

[714] In the morning all the moran come and form a circle round the fire, they bring their spears, and their lion-mane and head-dress. Four elders of known good character, with wives and children, then walk round the moran; two walk one way, two the other. One of each pair has a gourd of milk, the other a gourd of honey wine. As they walk they fill their mouths with milk or honey wine and blow it on to the sitting moran.

561 Each girl has a *sliper* of green grass which when removed is
534 held in the left hand, the gourd in the right. As the liquid is sprayed,
● 782 so is the green grass waved toward the moran. As they walk the elders roll down the blessing of the *Enguro-Narok*.

Be trustworthy! Oh return safely! O God.
Become ye sure and of God.
May the illness pass you by.
With those who hate us, that they may fall dry down on
their journeys.
Lenana and Kabiki and Whitlim wish thy safe return!
Grow up! Become possessed of wise heads!
Become as great as Kilimanjaro!
Be the father of my children; be fathers of boys and girls.
Be fathers of children, and bring them up well!
Have many wives!
May God love you! May the moon love you!
Be as sweet to us as milk and honey.
May the red bull of the night guard thee,
May our age be the longest.

As soon as the prayer is finished the warriors rise and disperse. Later they reassemble and celebrate the handing of their age by dancing and singing. Thus is a new Masai age founded. Henceforward the warriors live apart from the rest of the tribe. 54

The *Loita* and *Sale E-Unoto* ceremony took place in July, 1929, and lasted three days. They invited me to it, but, owing to pressure of political work, I was unable to attend till the morning of the third day at about 10 a.m. (Pl. XIII, Figs. 1-3, and Pl. XIV, Figs. 1 and 2).

The Masai definition of the *E-Unoto* is as follows:—

"The *E-Unoto* is a religious ceremony of blessing of the age-group, after which the warriors have leave to marry.

"The *O-Siapiro* gives the warriors permission to have sexual relations with initiated women."

The warriors were dancing at the time (Pl. XIII, Figs. 1 and 2). After about an hour they went off to a spot about a mile away in the forest, where I was informed that they sacrificed a bullock as a charm.[1] They returned about 3.30 p.m., about twenty of them being dressed in a manner similar to that of the three functionaries (Pl. XIII, Fig. 3). They danced round the *O-Siapiro* hut, and those warriors who were entitled to enter it led their families up to enter some cow-dung on it. The warriors then squatted down in a close group in the centre of the compound, while some elders walked round them drinking honey wine and spraying it out of their mouths over the group as a blessing. Others of the elders sat by the *O-Siapiro* hut and refreshed themselves with honey wine. It was at this point of the proceedings that the age-group of warriors was named *Iriniriin* (from verb *erin*, plural). This terminated the festival.

The *chief functionary* is the *Ol-Oiani*, but I cannot say what part he takes, having arrived so near the end of the ceremony. He is held in great reverence for ever afterwards, and it is unlucky for the age-group if a mishap befalls him. He must not take part in political affairs. He is always spoken of as *Ol-Oiani*, and his son, when he grows up, is known as the son of *Ol-Oiani*. (Pl. XIII, Fig. 3.)

There is a minor official called *Ol-Oiler enpiro*. *Enp-iro* is a thong of leather. If my spelling of the first part of the title is correct it would perhaps mean "He who spins the thong." But there are several words from which it might derive, and I have no knowledge of his duties to assist me in checking my spelling of the name.

O-Siapiro (*Ploapiro*).—Being ignorant of Kikuyu I had been puzzled by this word prior to reading Mr. Leakey's article. At the *Loita E-Unoto* it was built just within the eastern edge of the village. The village consisted of a circle of huts about 300 yards in diameter. I looked in to the *O-Siapiro*, but it was too dark to see anything. It was made of cow-dung plaster like an ordinary hut, but was much bigger. Except opinion the wall outside were the heads of numerous cows which the warriors had slaughtered.

I was informed that 100 of the warriors had not had sexual relations with initiated women and could therefore enter the *O-Siapiro*. After the *E-Unoto* the

[1] Masai, *Enkidinpsi*, the general word for a charm.

(51) **D. Sworn Fan.**—*Further Notes on the Masai of Kenya Colony.*

[51] Prior to the moran *Ol Kyl'ubor* the moran went out naked in the forest or bush.
[52] They built a small round stockade, called *Ol Pul*, of thorns with one entrance about
[53] 2 ft. 6 in. high through which one must crawl. Here they stare the moran, and sleep.
They may not the moran either within or without the *Ol Pul*. There is a picture of an *Ol Pul* opposite p. 280 in Hollis.

[53] The moran is pierced by a wooden spit about 10 ins. long. This is stuck in the
[54] ground by the fire and the moran is roasted. Soup is also made of fat and water
[55] and the bark of *Il Kidhowe* or *Il Kiborotti* trees. The decoction of these barks makes the warriors frown. They also smoke to this cause the curious hysterical fits into which they frequently fall when excited. I can vouch for the *Il Kidhowe*, small doses of which do, in fact, produce a funny and unbalanced state of mind. I have never tried the *Il Kiborotti*.

When the warriors sleep in an *Ol Pul* they pray to God at sunrise on behalf
[54] of their age-group. Each one takes his shower and rubs it in the ashes of the fire
[55] in the *Ol Pul*. He then goes out of the entrance and strikes the side of it and walks
[56] towards the East uttering his prayer and striking trees with the shower. While returning he sings the war song *Eng-ipolosi* of his age-group. As he re-enters the
[57] *Ol Pul* he throws the shower into the thorns at the entrance on his right and leaves it there. There are nearly always a bundle of showers to be seen in this position.

The prayer is as follows :—

"*Na Ai ainonoro*[1] *ainbulkua ainnaidiolisi enilala ainbulatuo Iseme Iemaar ii ngarai ol Iaphange. Na ipo Eng Ai ainonoro injaki ipuak inpaiko naang'ang'ang'ang. Ium ipo Eng Ai nanisja Na Ai nabnjaki ipuak ol gurer ooo ol kilo. Ium ipo Eng Ai nanisja injaki ipuak nanaar ii ngarai il Iaphang ainbulkua ii ennangak nainguana Iaiklua ennangak nanaar ii ngarai il Iaphang. Ainonoro Na Ai ooore ai engolang nanisja i'ol ainbulu tangaro ipuak il till ennangak.*"

Here is the translation :—

"O God I have prayed Thee having come out hither with my garment unloosed. Thy (warriors) have come out here, let not wild beasts hurt my head. And Thee O God I have prayed give us the cattle which prosper steadily. And Thee O God I have prayed bind together for us the age-group in one garment. And I have said to Thee O God let not the wild beasts hurt the heads of the fortunate ones who have come out here and let them not hurt the heads of other fortunate ones who come from far away. I have prayed Thee God, my beloved, when the sun rises from the valley, strike them as with the rays which are lucky."

Each age-group has a different song. The song of the Il Kinnip is "*Tangaraki ipuak i'alonu tanaro nalaru inlonuta a aaroi nemetti ol nanaai la nagat ainki.*" I cannot translate it because, like other Masai songs, it is couched in rather cryptic language.

Wherever the dead body is pierced, of males; other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrical patterns are often made on the upper part of the body in both sexes.

Arms and Armour

Iron is used for weapons (spear and sword of warriors, and arrows of others), arrows, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and a club arm-clamp, separate the Masai and Samburu culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged-end spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Samburu, Kipsigis, Kuyo, Keiyo and others of the Samburu division, together with the arm-clamp; the Elkeyo have retained them.

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 200 is correct) about 1 ft. in diameter. Shields are not cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums.

Religion and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (and also of the kind); but the alleged belief that the soul of a fallen or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and lit in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mwitanyi, the fallen who died c. 1890; then Thomson heard the Il-Ahiyuak praying to *Enk-ai* and Mwitanyi, and the Naali war dance after a victory, recorded by Hollis after Mwitanyi's death, contained also an invocation to *Enk-ai* and Mwitanyi. The "minor deity called Naiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Naiterkob, "the mediator between God and men." But the Masai word *naiterkop* means no more than "that which begot the earth," and then would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-epe*, the moon, is grammatically masculine.

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The

/xxi cont./

In the Church Missionary Society's station in Tavata' /titled in English/, this, as Merker himself told me, can only refer to a Masai man from whom he received other information: since for the many investigations on /xxi/ which his ethnological work is based (habits, customs, names, etc. etc.), he had quite different informants, of course. And Hollis' objection (1)

> 1. Personal communication from the researcher, highly esteemed by me, whom I had the good fortune to become acquainted with in September, 1956, in Oxford (at the Congress fÜr Religionsgeschichte /Congress on the History of Religions/), just as I was also able to become personally acquainted with the deceased Merker in 1957, after I had previously corresponded with him, which was extremely valuable to me in view of the so highly controversial Masai problem.

that he (Hollis), who was also acquainted with the Masai of his region for many years, would then also have had to come across the traces of such early history is only an argumentum e silentio. Either the more authentic Masai (in German East Africa), with whom Merker worked, were more faithful guardians of these ancient treasures, which is not impossible, or Merker also had more luck in gaining their confidence on this point than Hollis, who, just there, did not come across the right people. Merker, however, indeed also expressly states in the foreword to the first edition that it was not until the fifth year after the beginning of his work that he came across these traditions from ancient times, which by no means commonly come people's lips, but are handed down only in particular families and there are only ever to be found among a few old men. And then it took another year and a half before Merker had completely learned what is set down in his fourth chapter. Moreover, even according to Hollis (cf. also C. Klaz's introduction to A. C. Hollis, The Masai, their language and folklore, p. xix), the monotheism of the Masai

/[illegible]/

and their imaginary worship of God ("they have definite prayers and they petition the deity more frequently and fervently than the surrounding tribes are known to do" /cited in English/), wood unconventionally, just as generally a comparison of the book by Hollis, appearing shortly after Meeker's book, with Meeker's blood is the best apologia for the reliability of Meeker's ethnological as well as linguistic observations.

Another outstanding African scholar, the praiseworthy, well-known linguist Carl Meinhof of Berlin (now Hamburg), has shown all, and, to be sure, his linguistic reasons, turned against Meeker's designation of the blood as a "Semitic people," and with that then also at the same time against their assumed home in Arabia (3).

(3) 3. Cf. his review in Zeitschr. f. Ethnol., 36, 1904, pp. 750-754.

But what the Arabian Schwally (in Gunkel) said about the blood traditions (Archiv f. Rel.-Gesch., II, 1899, p. 300), that here "Semites of Semitic origin are well graded on African soil" (but "when and under what circumstances is hard to say"), also applies to the language, as I was able to convince myself by a thorough study of Hollis' book. Definite remains show that the blood must once have been Semites, and, to be sure, Arabian Semites. This will be briefly discussed in what follows next.

Not only does their own tradition teach that they came from the north, but this is also confirmed by a comparison of some of their number words with those /ga/ of the Celtic languages (especially Breton and Gaelic) and of Nuba. One should compare the following lists, to which I have also further added the number words of Masai, closely related to the blood, from the new book by Hollis (The Masai, their language and folklore, with Introduction by C. Elot, Oxford, 1909)

/12 copy./

[7a] dare to appear unannounced before the mighty one. Thus, the Mawri living on the military station of Mawri /Mawri/ remained hidden during Zendar's presence when the latter visited it at the beginning of 1900, and my Mawri servant dig not dare deliver a message either to Zendar or to an attendant standing beside him.

The aim of the chief's policy is the unity and strengthening of the Mawri. By lending the capacity of the western speed itself [5-6a] to expeditions against foreign tribes, he prevents his own people from devastating civil wars for which the unknown fraction of the districts among themselves would give continuous occasion. This influence makes possible for him the belief that a victory is attainable only through the secret power of the war medicine that he alone knows how to manufacture, and a defeat most inevitably comes if he produces it. Neither he nor his chosen relatives go to war. He gives remedies against epidemics and sicknesses — as a rule in the form /Tibi/ of magic medicines — and orders supplications [7b1] [7b2] [7b3] [7b4] [7b5] [7b6] [7b7] [7b8] [7b9] [7b10] [7b11] [7b12] [7b13] [7b14] [7b15] [7b16] [7b17] [7b18] [7b19] [7b20] [7b21] [7b22] [7b23] [7b24] [7b25] [7b26] [7b27] [7b28] [7b29] [7b30] [7b31] [7b32] [7b33] [7b34] [7b35] [7b36] [7b37] [7b38] [7b39] [7b40]

[553] whereupon the native company sits down in a circle under a dado tree in the vicinity of the kraal, half of it made up of the men and the other half of women. The infant to be baptized sits on the lap of its mother, who, along with the other women, is still deliberating over the choice of a name. A neighbor suggests that they should name the boy ol gong, that is, the dust one, because he is still quite dust for his age, whereon another reminds them of the joy that the mother had when she found an ostrich egg on the mayya a few days before her delivery, and opines that they might give the little one the name Moseth (from e' moseth = the egg). After the women have been chatting back and forth in this manner for a while, amid laughter, an older brother of the women (1)

> 1. That it is he who does this, and not the husband, is probably to be understood as a survival from matriarchal times, and likewise that the mother, not the father, gives the first name.

gets up and asks her what the child should now be called. She [551] mentions the name Ol ldigimbo = cattle owner (2).

> 2. Obviously in this meaning: the name Ol ldigimbo now means that its bearer, for the price of a head of cattle, had his freedom purchased from the slave state into which he had fallen as a result of a cattle epidemic and famine.

which the old man immediately announces to the gathering, whereupon the latter give a cheer for the "baptized" infant and cry out "dabe ciechani ñ gimbo e dané (acquire cattle and small livestock). Then the mother hangs a chain of large and small beads (ee mgeni, mgeni: e ngingi, ngingi) around the little one's neck. Now the entire company stands up and moves in single file toward the entrance of the kraal. Here lie the thorny branches that are pulled into the enclosure at night to shut up the kraal. They are danced around with short,

[535]
[553]

stamping steps, whereby, singing, it is prayed to 'Ng ai that he may let the boy become big and /57/ make a strong warrior out of him, one who will capture much livestock and then in old age may own a kraal as large as this one is here; then the people enter the kraal where the men again apply themselves to finishing the honey beer, while the women amuse themselves with dancing, for which they sing with shrill voices songs of praise and prayer for 'Ng ai. The success of a festival is judged by the degree that the men's intoxication and the women's gaiety reach at the end of it. Soon after the first name-giving, the second follows, at which the boy receives a name from his father, by which only the latter calls him. More rarely

726 Masai know for stimulating the nerves find use. Their effect will be
[263] discussed in a later section (2).
[276]

2. cf. XIX, Nerve Ailments: the em boschona sickness.

If the opponent is particularly strong, a forest meal sometimes lasts a whole month by order of the ol oiboni.

722 /94/ During this the boys pose as lords in the warrior kraal, but the girls bravely defend themselves with sticks. Every day in connection with their dances the girls sing songs of prayer: May 'Ng ai make the warriors strong and strongest of all the os sandja, etc. The mothers, on the other hand, pray silently in their huts for the same purpose.

726 Still in the forest the El móran put their weapons, ornaments, and clothing in order. Upon their return from the meat meal they remain only a few hours in the kraal, in order to fetch something
• [782] forgotten and to take along livestock as travel provisions. Here a few fathers and mothers have already appeared in order to call down

726
137

Ill. 36. Consultation on the war expedition.

/94 cont./

726 'Ng ai's blessing upon the sons and their companions going off to war.
• 782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with
726 it. Many of the latter smear themselves on forehead and cheeks with
[237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
[725] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind
704 will be deceiving concerning their direction of march. During the
701 march comradeships are formed by two men in each case, each of
726 which calls the other os tirit ai, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the eñg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/97 cont./

726 emouerak (sing. ol emouo) = horns. As soon as the ones in front
704 come across livestock, they call the others by long drawn-out dí
[727] shouts, so that they will round up the booty, which consists only of livestock. While the el aroi engage in hand-to-hand combat with the opponent, the latter's troops, joining together, seek to wrest the

726
782

Merker phot.

Ill. 39. Prayer before the battle.

726 booty away from the el dimito again. In connection with this fight-
704 ing there are the most wounded and killed. In order to shorten it and take the livestock quickly to safety, the latter are constantly urged on by the el dimito and pushed toward the steppe, out of the hostile area. The fourth troop, the el kigelóni, seeks to keep the way open for them and, from the front, to disperse the enemy pressing upon the herd. The last division is the os sioki, that is, the cowards, who were afraid to go along with the others, but now, when there is no longer any danger, slink around the herd like animals of prey, in order to steal. The el dimito and el kigelóni strike at them with their clubs, and a great row arises until the arrival of the leaders in the camp.
[727] Then the latter separate a number of cattle from the herd, which is still common property, and have them slaughtered, whereupon
727 every warrior receives a portion of meat. The warriors /98/ must
417 lay out a fence of thorns so that the livestock is safely sheltered in it for the night.

/98 cont./

727 in shares as equal as possible; one warrior receives as much as the
[703] other, but before that a few head of cattle are distributed as a special reward and first to those warriors who killed an enemy in battle, then to the benefactors (il gaminini), then to the one who captured the first head of cattle and to the spies who went ahead (el aigedalak), and finally to the wounded, each of whom is entitled to the head of cattle that he marked with the blood gushing out of the wound. The number of cattle that the individual of the ones mentioned receives, except for the last who is entitled to only one head of cattle, is determined by the size of the booty and the proportion of the size of the booty's parts according to the above order of succession. /99/ Every
727 warrior strives as quickly as possible to drive off from the others his
579 share of the booty, but each one also tries to take along with it one or more head not belonging to him. This, of course, gives rise to another brawl, in which there are almost always several wounded men. If the booty is too small for an equal division, the warriors form two
[614] parties, on the one side the El muleljan, on the other the 'L aiser and El mengana. The former have as slaughtering cry the term ado mongi = the red cattle, the latter the term narok geteñ = the black cattle, after which they are also sometimes named (for example, I heard it in songs). A fight decides which one of the two parties receives the entire booty.

722 At home in the kraals it was very quiet during the warriors' absence. After the farewell, those remaining behind went home, each somewhat heavy-hearted in the anxiety about a son or lover, which, however, was soon more or less pushed into the background by the expectation of the spoils that they would bring back. Soon after the farewell the old man was again
[237] squatting in quiet contemplation in front of
[136] his hut and chasing away from his face and head, also as before, with a fly switch (ol enjua, el enjuai /Fig. 20/) consisting of a gnu's tail, the flies constituting a veritable
[782] plague in the Masai kraals. Then he took a hair from the switch and made a knot in it for each of his sons who had gone to war,

Fig. 20.

/99 cont./

722 while he was imploring 'Ng ai that he might join together as securely
782 as this knot their body and soul. He prays in similar fashion every morning after leaving the hut. The mother likewise prays to God for protection for her son and each time offers him some milk, which she squirts on the ground either out of a gourd bottle or out of her
722 right breast. The girls are somewhat more cheerful about the affair, in that, instead of other prayers, they accompany their dances with litanies for the preservation of their lovers and the many other loved ones. Today the worrisome thoughts are again particularly intense; the warriors must soon be coming home, and then it will be definite as to whether the son or lover is among them.

727 From afar one already sees isolated little clouds of dust, which the cattle that are driven along stir up. The girls and young women hasten to meet the El móran and warmly welcome all who are approaching. But what is this? There, among the laughing women, stands a young woman who has just kissed her brother heartily on both cheeks; now comes her husband, who still wanted to take part in this one expedition before he remains at home permanently as an old ol móruo, and one would expect at least as hearty a welcome for him. But both act as though they did not see each other, indeed, they even turn away from each other. One might think she is angry with him because he staked his life unnecessarily. She is not angry with him, however; on the contrary, she is secretly happy that he has come back safely
[576] and is bringing along rich booty. But the Masai too /100/ have their
[593] "good breeding" and this requires that married people upon first seeing each other again after an expedition of war, cut each other completely.

From his share of the booty the warrior keeps only one or two milch cows, which he hands over to his loved one. The rest he presents to the mother, the father, the latter's other wives, the brothers, sisters, and one or another of his more distant relatives of whom he is particularly fond. A person who does not receive anything this
[721] time will get his share after the next expedition. He need not wait long, wars follow one another quickly, the interval between two is seldom more than two or three months. Hence the Masai are a veritable scourge for the neighboring tribes, and the rumor, "The Masai are coming," in spite of its frequency, is often enough to disturb whole towns and villages for weeks.

/200/

XX.

000 Death. -- Interment. -- Hereditary succession. -- Last wishes of the dying. -- Sacrifice to ward off impending death. -- Treatment and interment of the corpse. -- Funeral banquet. -- Mourning. -- Burial. -- Burial of Chief Mbatyan. -- Distribution of the inheritance.

763 When a family father feels death approaching, he calls his people, his wives and children, to him, in order to tell them his last wishes. [428] These apply principally to the division of the inheritance and saying further -- probably always without exception -- that the eldest son of the principal wife is to be the successor in the paternal kraal. Following this, the old man, with the words wõu, maitujuño, or õu, maitanaba, i.e., roughly: "come, I want to bless you," turns to the chief heir and gives him advice about keeping the members of the family together and supporting them in case of possible impoverishment about care for the brothers who are still minors, as well as for the surviving wives and daughters. He admonishes him further to be friendly and gentle toward the members of the family, of the lineage, of the tribe, and toward all Masai in general. He tell him that he is to celebrate the supplication feasts and to pray, and should also hold the relatives to this. He advises him to be thrifty, but warns against miserliness, and finally he presents him with one of his ornaments, as a rule, an armband, in memory of this hour.

The husband squats at the deathbed of a wife in order to hear her last wishes, which consist in her entrusting her children -- likewise present -- to his care.

[782] In the hope of warding off death, the dying one has a black bull slaughtered as an offering to God. His eldest son leads the sacrificial animal out of the kraal, slaughters it by killing it with a stab in the neck, then removes the skin, cuts up the animal as usual, and leaves the heaped-up meat lying as a sacrifice. No prayer is spoken.

764 First of all the ornaments are taken off the deceased individual; sandals and leather apron remain on him. If the deceased is a family father, his sons quickly slaughter a black ox and boil out the fat.

/200 cont./

764 With one part of it they first anoint themselves, the other part they pour over the corpse, after it has been taken out of the hut and laid out on a neat's skin. Amidst the lamentations of the women remaining in the kraal, the sons carry out the dead man and lay him down after a few hundred steps. The corpse is laid on its left side with the head toward the north, so that the face is turned toward the east. The legs are drawn up and lie one upon the other. The left arm is drawn up in such a way that the hand lies close in front of the head, whereas the right arm is bent at the elbow in a right angle; the upper arm rests on the abdomen of the dead man, the hand touches the ground in front of it. If one laid the dead man down in [761] any other way, according to popular belief, /201/ another death would quickly occur among the offspring or other relatives of the 76 deceased. The same is feared if a married man dies far from his kraal, which is why a family father, if he becomes seriously ill abroad, has himself taken home as quickly as possible. In contrast to this, warriors only wish to die abroad; death in the hut is not a proper soldier's death. Those who have fallen in battle are left lying on the spot on which they fell. In a few lineages it is customary to place the corpses of old people not simply on the ground, but in a shallow, troughlike pit at most half a meter deep, which, however, is not filled up.

764 After the corpse has been put down outside, the sons, with the eldest taking precedence, or -- if he is still a child -- the brother [782] of the deceased, cover it with green branches, whereby each says the prayer: "Ng ai pasinai, etoa baba erta jamŏn, njage ol ogunja nahall, najage eń gischon, njage ń gera," i.e.: "My God, father is dead, I pray, give health, give property, give children."

In case of a woman's death, after a black ram has been quickly slaughtered, her body is anointed with fat by women who are not relatives and then carried out of the kraal; the body of a person who leaves no children is carried out of the kraal, without being anointed or other formalities, and is laid down -- as always -- a few hundred meters away. If someone dies outside the kraal, he is left lying on the spot where death overtook him, and the ones present throw a few bunches of grass or leaves on the corpse. Later, upon passing

764 [765] /201 cont./ Later, upon passing the place, one again throws a stone or a handful of grass on that spot where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being. [782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

766 [791] [613] [764] [237] In contrast to the simple exposure of the corpse, that of a chief (ol oiboni), of a married man of the El kiboron lineage, and often also that of a sorcerer (ol goiatiki) is buried. The bottom of a pit a meter deep is covered with a neat's hide moistened with fat, and upon this the corpse is laid in the position described above. A second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

/206 cont./

821 light. The nubes minor and major /the two Magellanic Clouds/ are
[176] two lakes from which the cattle of 'Ng ai drink. The Pleiades
(ñ gokwa), through their rising in the west, announce the onset of
the great rainy season named after them. In Orion λ and the two
small stars beside it form a constellation called 'ñ golia = the
widows. The stars δ, ϵ, ζ, θ and the two small stars on a line with
it form another constellation. In it δ, ϵ and ζ are three el moruo
who are about to marry three widows. /207/ This constellation is
called 'ñ gapiak = the remarried widows, in contrast to the three
[176] 'ñ golia, who stand alone. The two large stars in Centaurus (ol
orugo) and the four principal stars in the Southern Cross are boys who
tend the cattle of 'Ng ai, which are represented by the small stars of
[187] the Milky Way. A ring around the sun or moon heralds rain. For
the warriors on an expedition this phenomenon is regarded as prom-
ising rich spoils. Just as sun and moon have made a kraal for them-
selves, so will the warriors on their way have to lay out such a one
for the captured livestock (1).

[823] 1. For the cardinal points (e' lubot Eńg ai =
the sides of God) the Masai have the following
names: North = Kōpekŏb or Kāpekŏb, which
also designates the land of the original home.
South = o' mĕroi, i.e., the battle; it is the
direction in which the Masai traveling south
always had to endure new battles against the
long-settled el meg. East = engilebunoto eńg
oloń = the sun rises. West = endoijeroto eńg
olon = the sun sets.

782 In case of distress, danger, sickness, or other calamities, all the
people pray to God. Otherwise the men say a prayer mostly only on
special occasions, whereas the women pray daily, mornings and
[184] evenings. Children do not pray at all in some districts, in others only
the girls pray, and in still others all children learn it at the age of
six to eight, usually through their mother. In praying, one turns the
[823] face to the north, or in the morning toward the rising sun and in the

/207 cont./

782 [823] evening toward the setting sun. Both the original home of the Masai and the paradise where the souls of the deceased live lie in the north. Every prayer, as a rule, begins with: 'Ng ai pasinai or 'Ng ai atomono or 'Ng ai atasaia, i. e., Dear God, I pray, I plead. Following this a praying woman thanks 'Ng ai for having protected her and hers and prays to him further for protection, for the preservation and increase of the livestock, and that many children may be granted her. During the prayer she extends her arms toward the sky. During this she holds bunches of grass in both hands or only one in her left hand, while she has tied several blades around the right upper arm. With every prayer the woman offers a little milk to God. Either she squeezes a few drops out of her own breast -- and, to be sure, the right one -- or she pours a little on the ground out of a gourd bottle. She offers a similar sacrifice morning and evening during the milking, in that she lets a little milk flow to the ground both from the udder and from the milk vessel.

As has already been mentioned, men in general only rarely pray. [613] The married men belonging to the El kiboron lineage, who often pray morning and evening, form an exception. I must leave it undecided as to whether all do this regularly, since I met only a few old men of this small and now very dispersed lineage. Among other married men there are also individual ones who pray to God every morning to keep them and theirs healthy and to give them a goodly number of wives, children, and livestock. /208/ But these are exceptions. As a rule they content themselves with greeting God, in the morning after having left the hut, by spitting several times in a northerly direction, sometimes also in the direction toward the rising sun. The prayer of the old men runs: 'Ng ai pasinai, tadjabage si nanu, njage e magiló = Dear God, also protect me, give me strength! The younger men, the warriors, pray in the morning, before they set out for a meat meal in the forest, and during it in the morning and in the evening. Furthermore, on a war expedition they pray daily, early in the morning before marching off and in the evening after arrival in camp. In doing so they squat close together, while a leader (ol aigwenani) and a benefactor ('n gamnin) go through the group,

/208 cont./

782 bestrew the individuals with the blades of a fodder grass prized for cattle, and say the prayer. This runs: 'Ng ai pasinai, nja ijōk ń gischu, jo ijok ń gischu kumok, ninǵua ijōk čolońga = may God give us cattle, give us many cattle, keep us healthy. While driving the captured livestock together, they sing a song of praise, which begins with the words; Hai narok, ohō, Hai kindera ije oh = black God, oho, we hurry near, oh!

In sickness, both the patient and his relatives pray for health for him. In serious cases of illness a black ram or a black ox is slaughtered, and part of its blood is poured on the floor as an offering to God. If the sick person is an old man or an old woman with numerous descendants, one slaughters a likewise black, gravid cow, whose calf is left lying outside the kraal for God, after the place has been sprinkled round about with the amniotic fluid.

796 782 Both in order to honor God and at the same time to supplicate him for something, the Masai celebrate feasts at approximately monthly intervals; these usually take place on moonlit evenings, more rarely they start in the morning or early afternoon.

One of the most frequent supplication feasts (ol ogŏr = the supplication feast) is the ol ogor l ol geretti, which during some periods and in some regions is celebrated almost every month, in others at considerably greater intervals, by the married men and the boys together, in order to supplicate God for the preservation of the health of human beings and livestock. In the kraal a large fire is kindled [372] [824] with dry wood (from the ol oirien tree), upon which green wood with leaves (from the os segi tree) (1)

1. Cordia quarensis Gürke.

is tossed, so that a strong development of smoke comes about. A [824] powder made from the wood and bark of the ol mogońgora liana, which smells like incense, is sprinkled in the fire. The thick column of smoke climbs toward the sky and takes the fragrance to God. Now one leads up a large black ram, washes it carefully [824] with honey beer, and sprinkles it with the powder of the e matańguju tree. Then it is suffocated, drawn, and cut up. /209/ Each of the

/209 cont./

796 782 participants eats a small piece of the meat, after he has roasted it in the ashes. Furthermore he is given a strip of the skin, from which [751] [237] he then fashions amulet rings, one for himself, the others for his relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the participants constantly sing: [539]

Hai narok, oho, Hai kindera ije, oh,
Hai narok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; aïdog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 782 233 On the following day the women carry fresh cattle dung to the ashes and knead a mash from it, into which is mixed a medicine that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor l oh gischu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

796 782 842 791 Another supplication feast is celebrated only by the married women in order to implore God to give them children. It is called iruga 'Ng ai ol adjo, i.e., may God hear the word. In or near the kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eń gera, eń golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogǒm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a [272] [237] [415] [824] [539] buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eń gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eń gischon, jo ijok ń gischu, jo ijok eń gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 783 If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, [784] provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eń gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

/219 cont./

695 685 testimony and to appear. Other witnesses who do not appear are punished with a beating by the party of the plaintiff. The proceedings, in which only male individuals may participate, take place as a rule under a shade tree close to the kraal in which the judge lives. Each new arrival, after he has greeted the judge, squats down on the ground in front of him. After those who were invited and a larger number of listeners have appeared, the proceedings begin. The judge rises and says the following prayer: 'Ng ai dadjaba ijok, jo ijok e magilo, jo [782] ijok ń gischu = May God protect us, may he give us strength and livestock, to which those assembled reply: eha or eschą (may he give). Then they proceed with the matter. Plaintiff, defendant, and witnesses are heard, one after the other. They assert the truth either by the word ewai = in truth, aischą 'Ng ai ń gischu = so certain that God may give me livestock, or by various curses; maoa 'Ng ai means: may God kill me if I speak an untruth; maoa en abere = may a spear kill me if I lie. With this last formula, one picks up a little sand with the spear point and brings this to the tip of the tongue. Another curse consists of chewing a few blades of grass and with that saying the words: madaduarigí kuma ń gonjet ten eledjer ata 'Ng ai, i.e., may this grass be poison to me if I have lied before God.

For exacting truth, torture is customary, tena en obíni, i.e., tie the string! The string of a bow is tied so tightly around the upper arm of the defendant that it cuts into the flesh. If the testimony has not succeeded in convicting the defendant and if he cannot prove his innocence by an alibi, an ordeal is used. The most common is the ol momai l os sarge, i.e., the ordeal of the blood. The defendant is given a bowl with a mixture of blood and milk. Before he drinks, he says the words: 'Ng ai a-ok elle sarge, tena nanu ajawa ena geteń, naga elle sarge, i.e., God, I drink this blood, if I have taken that head of cattle this blood will kill me. If the defendant does not die after eight to fourteen days, proof of his innocence is provided by that. Another ordeal is the ol momai l en jerta natoijo, i.e., the ordeal of the dry wood. By accepting these, he invites God's punishment upon himself if he is guilty. He will then soon /220/ be dead like the dry branch, whereas otherwise he will remain vigorous and healthy, as the green one still is. Less common is the

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood ". He also states that *Unoto* " is probably the best known and most misconstrued ceremony in the Masai age-grade system ". 884 561

Unoto is not performed at a single place for whole Masailand, but in every territorial section or group of sections. [90] It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull. [634]

a) The first stage takes place in a special hut called *singira*. [91] Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY, [92] another test is performed insidie the hut aiming at detecting those who have entered surreptitiously. [346] [834] [754]

In the annual report of the *NAD*, [93] we read that every candidate is expected to give " an account " of his past life. " The importance of the *E-Unoto* " states the same report, " lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe ". " The *O-Singira* " says FOX, [94] " gives the warriors permission to have sexual relations with initiated women ". [783]

b) The nomination of the ceremonial leader (*ol aunoni*, pl. *il aunok*, or *ol oluno*) takes place inside the *singira* hut. The elders 561 634

[90] LEAKEY's statement, p. 194, that at the *Unoto* " all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present " is emphatically denied by FOX, p. 451, and FOSBROOKE, p. 29. According to FOX the following sections perform it: (a) Purko; (b) Loita and Siria; (c) Damat; (d) Kuputiei, Lodokilani and Matapatu; (e) Laitokitok; (f) Kisongo. And FOSBROOKE says that the *Unoto* is celebrated " by sections or groups of sections " and is attended by as many warriors as possibile, " but by no means all ". SANDFORD, on HEMSTED's authority, recorded that the *Unoto* was held by the Purko, Kakonyuke, Dalalekutuk and Damat on the Kinangop. The Sigirari, Matapatu, Kaputiei and other divisions where it suited them best. [114] [184] [634]

[91] There are contradictory descriptions of the *singira*. MERKER states that it is a 'very big hut'; BAGGE says " not so big "; HOLLIS " small ". Leakey and Fox state respectively " an enormous ", and a " very large " hut. Probably it all depends on the actual number of the initiates involved.

[92] LEAKEY, *l. c.*, p. 195.

[93] *NAD*, p. 21.

[94] FOX, *l. c.*, p. 452.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 "I say, thou art no longer *ol moran* (a circumcized, a warrier),
[539] but *ol morou* (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks MERKER, "it all depends on the warrior whether he chooses to take a greater or lesser part in raids. Usually he gets married at once and lives with his wife either in
[591] his father's kraal or in the warriors' kraal (*manyatta*) until all his age-mates have married. Only then he is recognised as *el moruo*;
561 each one builds his own kraal and lays aside the clothes, decora-
554 tions and the pigtail of the warriors".

[582] It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognised" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

561 A very detailed description of "the *ngeherr* of milk" is given by J. V. DAWSON, but the ceremony is mentioned also by other authorities. FOX,[186] states that "this ceremony is performed by each warrior individually",[188] and DAWSON tells us that it occurs at the village of the initiate's father and that four *piron*-elders take a special part in it.

[535] The ceremony is preceded by a dance. The candidate is clothed
292 in women's clothes and the first two of the elders place women ear-
301 rings (*surutya*) on him.[187]

A test follows, in which the candidate is expected to confess
[183] how many times he has "stolen milk", i. e. taken milk by himself
[685] or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" at this

[186] *Fox, l. c.*, p. 453.

[188] He says also that "the ceremony usually takes place nowadays a year or two after the *E-unoto* owing to the Government policy of reducing the period of warriorhood as much as possible".

[187] These ear-rings, *surutya*, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a femine type.

[P.107-A] Loita

561 **The 'E-Unoto' Ceremony of the Masai.** *By Lord Claud Hamilton. With three text figures*

135 The cycle of ceremonies connected with the forming of a Masai age set starts with that known as *en-polouna*, performed by the members of the age set immediately senior to the existing warrior set. These members are destined to become the instructors in tribal lore of the youths who are about to comprise the new age set. *En-polouna* is followed by *en-dangwe* which marks the end of the current circumcision. These two [535] ceremonies are followed by a four-day dance of the initiates-to-be called *en-kipanta*; and the circumcision of the new age set is carried out over the next three to four years, the youths being 14–17 years of age. Each generation is divided into Right Hand and Left Hand circumcisions; the latter begin their ceremonies about six to seven years after the former; but both cease to be warriors at the same time.

Seven years after the beginning of their circumcision, the members of the Right Hand Circumcision become senior warriors through the *e-unoto*. This ceremony, which is part of the age-set institutions, is held about every seven years, when an age set of junior *morans* (warriors) feels that it is sufficiently strong and mature to graduate into senior *morans*, and so 'push' the next senior warriors of the previous age set up into adult manhood. The word *e-unoto* is derived from the verb *e-un*, to plant upright or set up (*i.e.* a new age set of senior warriors is 'set up') and, as will be seen below, certain things are ceremonially 'set up' in the *manyata* (warriors' kraal) where the ceremony is held.

Tribal elders choose a site for the ceremony, and there the *morans* who are to take part, aided by their mothers and girl [342] friends, build a new kraal. Each young man has his own hut, a [361] long, low building of withies, mud and cow dung. These are built in a circle, facing inwards. At night branches are pulled into the gaps between the huts to keep out wild beasts which might prey on the cattle sleeping in the *ngama* encircled by the huts.

Besides choosing the site, the elders also select 40 *morans* from those about to take part in the ceremony. These 40 'pure ones' as they are called must be young men of good character, 100 per cent. full-blooded Masai and without physical blemish. Their leader, the *Ol-Oiano*, is chosen secretly and is not told of his appointment until the ceremony is due to start. Every *moran* dreads being called upon to fill the position for the *Ol-Oiano* is [983] regarded as a scapegoat for the misdeeds of his fellows. They believe that if he dies young as a sacrifice for their sins, they will live long and prosper.

After the other huts have been built, the mothers of the 40 [346] 'pure ones' build the sacred hut called *O-Singiro*. This is a round building, also made of branches, mud and cow dung, topped with a conical roof of the same materials. Around its base is laid a circle [239] of bullocks' skulls on which are left the horns and a strip of skin running down the face. Inside, in the centre of the *O-Singiro*, the *Ol-Oiano* 'sets up' a stick of the wild olive tree (*Olea chrysophylla*) and so receives his name which means 'He-who-set-it-up.' The doorway of the *O-Singiro* faces that of the *Ol-Oiano*'s hut, next to which is that of his assistant known as 'The Cutter-up of the Hide.'

The *e-unoto* of the Loita division of the Masai was held on 10–13 June, 1959, at Entasekera in southern Kenya. The youths taking part were of the right-hand circumcision, the members of which are known as *Il-Dewepani*.

561 The ceremony lasts for four days, and the first of these is called 535 'The Day of the Red Dance.' At dawn breaks, all the people assemble outside their huts facing east. Four elders chant a prayer

/112 cont./

564 326 [192] [784] [578] because he thinks a misfortune will be conjured up by it: it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kooni" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 326 779 829 [783] The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous: if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 197 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1906, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them [563] who know it." This statement by Hollis is ex-

/112 cont./

564 326 [197] [198] [114] [563]

/footnote 2 cont./ plained by the fact that a few El lumbua blacksmiths also live among the Masai blacksmiths. They speak their own dialect, which, of course, is unintelligible to the non-blacksmith El masai ("ordinary Masai," as Hollis designates them), who, indeed, scarcely come in contact with them.

564 326 461 [114] The opinion of many a European, that the /113/ relative diligence of the blacksmith might have brought to him the scorn of that type from the non-blacksmiths not inclined to work, is also a rude error. I have become acquainted with a large number of El konono who for about two decades have not had a hammer in their hands and very many who have not even made an attempt to learn the trade, but rather live entirely like other Masai. All these, however, were despised exactly the same as their forging fellow caste members.

564 326 783 Like the blacksmiths themselves, the products of their art, the weapons and utensils made by them, are regarded as unclean. In order to take the uncleanness from them, the Masai rubs with fat every new object fetched from the blacksmith's shop, as well as his hands which have touched the still unclean object.

564 326 Even the reputation that a few armorers enjoy, on account of the excellence of their products changes nothing in their low social position. The most famous at the moment, old left-handed Engussa from Ol brugga, an artist in his field, is just as despised as any other blacksmith. The Ol brugge people, however, jealously see to it that he does not also work for warriors of any other province or even for members of another people.

564 326 361 [314] [317] [349] [354] 326 314 While the other kraals, tied to the presence of good pastures, are always moved with the disappearance of the latter, the blacksmith kraals remain for a long time in the same localities. The el konono have only very little livestock, but for their craft they need charcoal and ferruginous sand. They establish their homes where both are to be found nearby. The workshop (ol guguet) is built close to the kraal. It consists of a grass roof resting on six to eight posts. In the center lies the hearth (en edonschore). The smith makes his tools as well as his

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ goloobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaIn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a [272] [237] [415] [824] [539] buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 • 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

/214 cont./

426 686 [672] the full debts, not only up to the amount of the inherited property. If a warrantor is liable for the debt, he must satisfy the creditor if the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a stool with the legs upward, or he wraps the legs of the stool or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries. [784] The ol momai is a divine judgment. A person who does not grant the request expressed in the ol momai sign will soon be punished by 'Ng ai through death or illness. [783] A person who did not grant the request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men whom he entertains with a head of cattle and honey beer. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

675 426 764 Loans or contracts are unknown. The creditor does not have a right to the corpse of the debtor; neither debts nor misdeeds or crimes committed by the deceased have an influence on the nature of his burial.

628 682 No distinction is made between murder and manslaughter, but there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge carried out by boys and warriors or only by warriors. [593] Any brother of the one murdered is first of all entitled to carry out the blood [672] revenge and, further, any man belonging to the family. Blood

/220 cont./

695 ol momai l eṅ gauo, the ordeal of the bow. A bow is placed on the
685 ground and a magic horn is set at either end of it. This is a goat horn that is filled with a medicine made by a sorcerer. As soon as the defendant has stepped over the bow, his lot will be, if he is guilty, the punishment of God, that is, in this case death. The effect of the ordeals rests on the firm belief in them. The guilty one is convinced that the punishment of God will have to strike him. He imagines that he is ill and sees his salvation only in an open
• [783] confession. He goes to the one robbed, confesses his deed, pays the customary fine, and begs for forgiveness. Only by gaining the latter can he escape the consequences of the false oath. The one robbed
[572] must in this case -- if he himself does not wish to invite the punishment of God on himself -- grant the pardon and does so through words and spittings, whereby at the same time a friendship is initiated between the two. Besides the aforementioned ordeals there are two others which are not accompanied by curses. The ol momai l ol origa l en gulugok or ol momai l ol origa l eṅ gob = the ordeal of the stool made of earth. The defendant must sit down on a specially prepared lump of earth. If this crumbles under him, he is regarded as guilty. The other one, the ol momai l eṅ gine (of the goat), is used only if the defendant is a non-Masai. The defendant, standing, takes a goat between his legs and cuts an ear off it. If the blood issuing from the cut spatters him, he is guilty.

The majority of the assembly decides whether and which ol momai is to be used. The accused must submit to the ordeal, and, to be sure, only he alone. He may not substitute a proxy. It is never used against witnesses and plaintiff. The ordeal always constitutes the conclusion of the session, which the leader then terminates with the same prayer with which he began it.

If the ordeal has done no harm to the defendant within ten to fourteen days, he is completely cleared of suspicion. The one
[787] robbed turns to a sorcerer (if he had already turned to such a one for the first proceedings, he now goes to another one), who again, through the eṅ gidoṅ, gives a description of the guilty one. As soon as the one described is found, there are proceedings against him.

/319 cont./

*121 that part of the blacksmiths moved to Egypt with Israel, the possi-
*171 bility that this nevertheless might have been the case should not be
326 excluded either. Now how would these blacksmiths have fared then?
564 If we assume, with the Bible, that at that time the Israelites were a pious people and were reduced to servitude by the Egyptians, either of these circumstances could then have sufficed, in the course of their long captivity, to remove in practice the ancient prejudice against the blacksmiths and to unite firmly the fellow believers as well as the fellow tribesmen. There still remains another possibility, however. If we assume that the latter did not happen and that at that time, just as, correspondingly, is the case even today among the Semite peoples of the interior of Africa, marriage between relatives of smiths and nonsmiths was not permitted, it would have become imperative for the smiths, employed in various localities on account of their skill in making weapons and separated from one another for the hastening of permanent sedentation in the land, to merge with the Egyptians through mixture with them. If there arose through that a shortage of smiths for the Israelites, this could have been remedied by having people from families who did not originally belong to the blacksmith caste learn the craft in Egypt and practice it there as well as later on. By analogy with the Masai, such people would not sink in the public esteem by practicing the blacksmith's calling. But even if I assume that a part of the smiths /320/ returned from Egypt with Israel, their social position must have become better, conditioned by the shaping of the religious cult, in the service of which the smith placed his craft for the making of vessels and other implements. He whose duty was the outfitting of the temple could no longer have remained a despised, shunned, unclean man.

If, therefore, the Old Testament nowhere directly states that
• [783] the blacksmiths made up a lower, a despised caste, in my opinion in its oldest part it nevertheless still contains reminders of the fact that the blacksmith was also regarded as unclean by the Israelites in antiquity.

/320 cont./

*121 If the blacksmith is unclean, then so are the objects that he
*171 touches, especially the ones that come from his hands as products
326 of his skill. Now, since the blacksmith's products are indispensable
564 in daily life, people help themselves by means of a purification
• 783 ceremony. The Tatoga as well as the Irok man dips a new object fetched from the blacksmith's workshop into the water of a distant brook and at the same time washes his hands. The Masai smear with fat the things coming from the hand of the smith -- spear (blade and shoe), sword, knife, razor-knife, ax, sewing awl, pincers, arrow points, branding iron, cowbells, large and small leg-bells, as well as various ornamental objects -- and likewise their hands, which touch these things -- in order to remove from them the uncleanness adhering to them from the blacksmith. I do not know whether the ancient Israelites had a similar custom, but I deem it likely.

What seems adequate for secular life need not suffice for the religious cult; on the contrary, it may be assumed from the first that people are more sensitive there. Thus, in place of the iron knife, the Masai used a reed splinter for cutting the umbilical cord of the newborn child, in accordance with their eighth commandment. Now a number of Biblical passages that tell of the oldest period of Israel, the time of the nomadism, also speak of the use of the stone knife and others of the prohibition of the iron knife for cult purposes. Thus we read in the 4th chapter of the 2nd Book of Moses /Exodus/ in the 25th verse: "Then Zippora /Zipporah/ took a sharp stone and cut off the foreskin of her son." And in the 5th chapter of the Book of Josua /Joshua/, Jahve /Yahweh/ commands the latter: "Make thee stone knives and circumcise again the sons of Israel for the second time. Then Josua /Joshua/ made him stone knives and circumcised the sons of Israel at the hill Araloth." We find the interdict for the use of the iron toll in the 20th chapter of the 2nd Book of Moses: "And if thou wilt make me an altar of stone, thou shalt not build it of hewn stone: for if thou lift up thy tool upon it, thou hast polluted it (1)."

1. This order has been interpreted that the natural, original character of the altar would

/320 cont./

*121
*171
326
564
783

/footnote 1 continued/ make it particularly worthy of God. This assumption is untenable, however, in view of the specific order concerning the arrangement of the tabernacle and the temple, the artistic furnishings, the sumptuous priest's clothing with the breast shield studded with precious gems, etc.

Here it is /321/ therefore directly stated that the stones will become desecrated through being hewn with iron tools. Circumcision and altar, however, are the oldest and at the same time the most important arrangements of the Israelitish cult. Just as the stones of the altar were not to be made unclean by contact with the chisel rendered unclean by the blacksmith, so also the use of the iron knife for circumcision, through which, indeed, the Israelite was precisely to be purified religiously, had to be forbidden (1).

1. Even in ancient Egypt the blacksmith's product appears -- traditionally, consciously or unconsciously -- to have been regarded as unclean: one opened the abdominal cavity of the deceased with a stone knife for the purpose of embalmment.

It is to be particularly noted here that, of the three Biblical passages drawn on, the first two belong to the Jahvist /Yahwist/, the last to an elaboration from Jahvist and Elohist. But the Jahvist -- as I have already mentioned above -- is the one source that above knows Kain /Cain/ and the Kenites as well as the connection between the two and is also considered the oldest of the ones worked together into the Pentateuch. I believe one may conclude from this that the sources upon which the Jahve Document is based would have known about the uncleanness of the smiths, which would furnish proof for the existence of this view in ancient Israel.

/321 cont./

*121 *171 326 564 [183]

That it was subsequently lost is sufficiently explained by the fact that the Israelites settled down among non-Semitic peoples by whom the blacksmiths were not regarded as unclean and among Semitic ones who, through the influence of the others, probably likewise were no longer familiar with it, as well as further through the influencing that their psyche underwent through the immediate and subsequently permanent mixing with these peoples. With the loss of this view, there was also lost the fear of the use of the iron knife for circumcision, but, on the other hand, the altar was erected out of unhewn stones even in the Makkabäer /Maccabean/ period (1st Makk. /Macc./ 4, 47), but only because this was expressly commanded in Mosaic law (2nd Moses /Exodus/ 20, 25), whereas nothing is contained in it about the use of the stone knife for circumcision.

Now if the Kenites are the descendants of the blacksmiths of the Israelites from the pre-Egyptian period, i.e., from the nomadic period of Israel, their dispersal at Sinai, in Kanaan /Canaan/, among the Amalekites and Midianites is explained by the fact that they, as among primitive peoples still today, so at that time also among civilized peoples, as makers of weapons, always are and were the most valuable prisoners of war. The Bible also gives the information that this prevailed in the wars against Israel. According to 2nd Kings 24, 14, all the smiths of Jerusalem were captured by Nebuchadnezzar, and, according to 1st Sam. 13, 19, all the smiths of Israel were led off by the Philistines.

Since the other Pentateuch sources are no more familiar with Kain /Cain/, or a personality corresponding to him, as the first murderer than the myth of the Masai is, /322/ and since furthermore it does not in the least fit in with the sphere of thought of a primitive people to picture the eldest son of the first human couple as the murderer of his brother and hence as an obstacle to the rapid increase of human beings on earth, I suspect that the Jahvist legend of Kain's murder of his brother did not originate until a later time. In the advanced Israel, with its more highly regarded smith, there could no longer be any place for the traditional contempt of the Kenites. One needed another reason in order to represent as contemptuous

M 614 [186] /18/ The 'L aisér and El mûleljan to a certain extent stand in contrast to the El meńgana, whom they half-mockingly, half-abusively also call 'N dalata-gutok (1)

M [192]

1. 'N dalata, gluttons, en gutok, the mouth; by putting the two words together the idea of the first is supposed to be intensified.

or Eńg-adji-nagúl-alai (2),

M [192]

2. = the house of the hard teeth; nagúl = hard, el alai, the teeth.

and, in contradistinction to them, designate themselves as Eńg adji el masai. As the reason for this, tradition relates that the El meńgana were once separated for a longer period of time from the other two tribes and, upon reuniting, made a bad impression because they no longer observed the divine commandment forbidding the killing of female animals for consumption. This gave rise to the above nicknames, which, freely translated, mean "greedy gluttons."

M [173] [184]

M 613 The El bedēs and El goré are not infrequently designated as El aisegela, a name formed after that of a war leader, Os segél. As the reason for the combination, it was said that members of the two sublineages were once notorious cattle thieves.

M 791 The most outstanding lineage, not only of the 'L aiser tribe, but of the whole Masai people, is the Eń gidoń, because both the family of the chief (ol oiboni) and that of the sorcerer (el goiatek) belong to it. The designation "chief" is actually not quite correct, since the ol oiboni does not rule directly and does not exercise any real executive power. He rules only indirectly; the firm belief of his subjects in his prophetdom and in his supernatural ability of sorcery gives him an influence over the destinies of the people. Despotism and cruelty, such as we find among all Negro rulers, are foreign to him. He is less a ruler than a national saint or a patriarch, in whom the Wakuafi and Asá also see their head. The people speak of his saintly person in timid awe, and no one would

[613] [754] M [829] D [791]

/51 cont./

845 wife of her husband; often, however, she also nurses both herself.
[301] Soon after birth the twins receive a leather cord trimmed with cowrie shells hung around their necks, an expression of paternal pride, so that everyone will immediately recognize the child as belonging to
[203] a pair of twins. To be sure, the Masai living in a circle of two to three days' march are well acquainted with each other and are immediately informed of every bit of news through the constant intercourse between the individual kraals. "Every Masai coming from farther away, however, upon seeing a child unknown to him, always asks first of all: "Who is his father?" The birth of triplets is said not to occur. After the birth of a deformed or dead child, the young mother is beaten by the women of the kraal and the father over-
[843] whelmed with abuse from the other men. The woman is punished because it is assumed that she practiced sexual intercourse in far ad-
[784] vanced pregnancy and through that injured the fetus. But then an unnatural birth or a stillbirth is also regarded as a punishment of God for a sin, especially as one directed against a relative, a fellow lineage or tribal member, be it through inflicting an injury or
847 neglecting a bond of friendship or love. They admit the killing of newborn children only in case the child comes into the world very frail or was conceived out of wedlock by an old, sick man. There can be no doubt, however, but that they also kill deformed children immediately after birth, for one never sees cripples among them.

844 During the birth process the women of the neighborhood have streamed together in front of the hut of the woman in childbed, in order to bring her milk or also flour. First of all the other wives of
[626] her husband hasten there, as well as the women of her kin, her lineage or tribe. Good /52/ breeding demands it of them and they comply in order not to be subjected to the mockery and abusive language of the others. When the child is brought into the world, the women of the kraal sing and dance, in order to thank 'Ng ai for the successful birth, for which they receive an ox from the father of the newborn child, which they immediately consume outside the kraal. The next day a second ox is slaughtered, at the consumption of which
000 any guest is welcome. In the lineage of the El kiborõn every newborn

IX.

000 Age classes. -- The annual courses of an age class. -- Age-class association. -- Organization of the circumcised. -- Choice of speaker and of the ol aunoni; their activity. -- Festivities at the formation of an age-class association. -- Significance of the age classes. -- Division of an age class. -- Names of age classes.

561 All the boys circumcised during a series of circumcision years belong to an age class (ol borōr). Within them the boys form, since they are circumcised at yearly or somewhat longer intervals, annual courses by way of divisions.

The first annual course of an age class is the el jaṅgĕn ŏbĭr; they are followed by the el bariṅgo-duallan; the youngest annual course of the ones circumcised during the circumcision years is the el gerimbot. They are followed by a fourth one, the el oirogua. These are circumcised only after /72/ the circumcision years have officially ended by the celebration of the eṅ gebāta festival ordered by the ol oiboni. Anyone who wishes to be circumcised after this festival may not take part in celebrating the above-mentioned festival, otherwise his circumcision is not permitted.

Every two age classes together form an association (ol adji) in which the older is designated as the right circumcision (emorat' ertatenne), the younger one as the left circumcision (emorat' ekediĕnje). Each of them has definite rules forbidding for them the uttering of certain words or the enjoyment of certain foods. The emorat' ertatenne may eat neither head nor tail pieces of slaughtered livestock and do not say eńg ań en dare for goat-kraal, /Ill. 25 appears here/ but rather e merata en dare; moreover, they say ol ogunja for head, and not ol ukuṅgu, and for tail piece, not ol gorom, but rather en aisuba. The others may eat neither gourd nor cucumber, and for arrow poison they say en duerai, instead of e sajĕt. It is an insult, which often leads to immediate violence, if the one does or says the things forbidden to the other, which are called en dorotj, in the latter's presence.

561

/98 cont./

727 it for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutililated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as ebor além. But [784] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few [583] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child [597] exactly like his own. A ceremony of adoption does not exist; the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the home kraal; in the evening a thorn fence is again built, and at the same time the share of the booty destined for the ol aunoni is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit eating. It is called, for example, kirima, because men fell on both sides. Other names are: [411] [701] [291] [516] bögörět if the provisions in living livestock taken along on the expedition did not last, and the warriors, out of hunger and contrary to the existing custom, had to eat tree fruit; ńgörě if the El móran suffered on the way because of a shortage of water; ńgníria, formed from the call matińgiria ápo, that is, approximately: "only courage, if it is not possible, what does it matter," a frequent saying [703] if one believes oneself inferior to the opponent in strength. The next morning, early, before the departure, the leaders distribute the booty

Merker phot.

Ill. 40. On picket duty.

564 /111 cont./
326 luck and would cause their inhabitants illness and death for man
and beast. Even in an emergency one never claims the hospitality
[777] of a blacksmith, any more than one ever grants him guest privileges.
[574] The warriors coming from blacksmith families do not live in the
[701] ordinary warrior kraals, but in the smaller blacksmith warrior-
kraal (ol manjata l el moran l el konono) and only with daughters of
blacksmiths. They do not set out for the battlefield with the other
warriors either, but alone, and naturally bring along, since they /112/
are few in number, only a little booty each time, which then often
enough is simply taken away from them by the other warriors. An-
[582] other Masai does not marry the daughter of an ol kononi, just as the
latter's son dare not desire in marriage the daughter of a man who
[837] does not belong to the despised blacksmith caste. Even the extra-
marital association with a woman or girl belonging to the black-
smiths is regarded as disastrous for any other Masai. It is believed
that he will sooner or later lose his mind, will never be able to
become the father of a healthy child, or on the next field expedition
he will be killed by the spear or arrow of an enemy. How despised
[784] the blacksmiths are is shown by the fact that a Masai does not dare
[192] to pronounce the word "ol kononi" after the onset of darkness (1).

564
326
114
784
192

1. More than once the people, when in camp, in the evening, I wanted to speak with them about the el konono, begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and thus also on the evening of December 31, 1901, when I was camped near a Tatoga settlement on the steppe southwest of Mburu. A lion then penetrated into my camp in the night and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the Masai made me responsible for this incident, "it would not have happened if you had not spoken about the el konono last evening; we have so often told you this."

/112 cont./

564 326 [192] [784] [578] because he thinks a misfortune will be conjured up by it; it is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "ol kononi" is regarded by the other Masai as a strongly insulting invective expressing contempt.

564 326 779 829 [783] The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Masai say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous; if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

564 326 142 It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Masai people, which the blacksmiths themselves also maintain without exception (2).

564 326 197 198 114 2. Obviously the Masai blacksmiths speak the Masai Language and not another one of their own, as had been supposed from the statement by C. Hollis in his book, The Masai, their language and folklore, Oxford, 1905, p. 331. Hollis says there /the quotation is in English/: "The smiths have their own language, which, although a corruption of Masai, is not understood by the ordinary Masai. Not all of /this footnote is continued on the next page in the original source/ them can speak this language: it is only a certain number of them [563] who know it." This statement by Hollis is ex-

/158 cont./

805 /footnote 3 continued/ 're en aimen, etc.,
the 30th eschomó tomon-oimiēt en aimen.

17th day: (ol aba) tomon-obischana or ol onjúgi = the red one.
18th day: (ol aba) tomon-oissiēt or es sobia naiturúgu.
19th day: (ol aba) tomon-endorot or es sobia em bolós.
20th day: (ol aba) digitam negera or es sobia nabaye or also en ekiborōn.
21st day: (ol aba) digitam-obo or e' mge naiturugu.
22nd day: (ol aba) digitam-aré or e' mge em bolos.
/159/ 23rd day: (ol aba) digitam-oguni or e' mge nabaye.
24th day: (ol aba) digitam uñgwan or en aimen narok = the black darkness.
25th day: (ol aba) digitam-oimiēt or en aimen narok.
26th day: (ol aba) digitam-oile or en aimen narok.
27th day: (ol aba) digitam-obischana or en aimen narok.
Moreover, in a 29-day month, the:
28th day: (ol aba) digitam-oissiēt or eñ gartake ol aba or en aimen narok.
29th day: (ol aba) digitam- endorot or ewake ol aba or endebe en aimen.
In a 30-day month, the:
28th day: (ol aba) digitam oissiēt or en aimen narok.
29th day: (ol aba) digitam-endorot or eñ gartake ol aba or en aimen narok.
30th day: (ol aba) ossom negera or ewake ol aba or endebe en aimen.

The day designation, however, is now by no means so common that every Masai would be able to determine it precisely on every day. Actually only the following days or groups of days are in more constant daily use:

The 1st day, as ebor ol aba nabo, as the beginning of the counting
• [184] and initial day of the eñg ebor ol aba, the light of the moon; on this day no circumcision is undertaken.

The 4th day, as ertaduage duo ol aba, as new moon.

/159 cont./

805 The 10th day, as tomon negera, as the final day of the first decade.

The 15th day, as ol gadet and final day of the eng ebor ol aba.

[777] The 16th day, as ol onjori; it is the unlucky day for war and the initial day of en aimen (= the darkness).

The 17th day, as ol onjugi; it is the most important unlucky day

[777] in daily life, but on the other hand, is regarded as a lucky day in

[784] war; on the ol onjugi people do not change dwellings, do not shave their heads, and do not undertake any circumcision.

The 18th day to 20th day, as es sobiaïn.

The 20th day, as en ekiborōn, on which the boys belonging to the El kiborōn lineage are circumcised, and as the final day of the second decade.

The 21st day to 23rd day, as mgeñ.

[784] The 24th day, as initial day of the en aimen narok; on it no sacrifices may be offered, and frequently too, just as on the subsequent en aimen narok days, no circumcision is to take place.

The following days up to the end of the month, as en aimen narok.

Within these days, the 4th, 10th, 17th, 24th, and 1st are again especially familiar.

805 Three months form a season; four seasons, the year (ol ari). The

821 names of the seasons are:

132 Ol dumeril, that is, the time of little rainfall, which precedes the great rainy season. This falls in the eñ gokwa, named after the Pleiades, which then rise low on the western horizon.

/160/ Then follows the ol airodjerod, the season of the lighter after-rains, and then the ol ameïi, the period of hunger, of drought.

The months of ol dumeril are: 1. ol gissan, in which the goats and sheep bring forth young; 2. ol adallo, that is, the heat of the sun; 3. ol golua.

The months of en gokwa are: 1. le erat, formed from er rata= green valley. The rain, which has fallen meagerly up to now, has been sufficient to cover with fresh green the valleys and deeper lying places in the otherwise still yellow, dry steppe. 2. os somisso, the dark, gloomy one. The sky is cloudy, it rains a great deal, the days are gloomy and dark. 3. ol ñerñerua, formed from nerneri = fat; the cattle soon become fat because of the young, fresh grass.

/163 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the smashing of the spermatic cords with the club between the wood and string of a bow (a-idôn). The testicles are not removed, but are left to atrophy. In the same /164/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always [825] not until they are fully grown. Bulls and bucks with unnatural sexual [777] instincts are slaughtered as soon as the vice is noticed, since they [784] are regarded as bringing bad luck. It is believed that, as a result of [731] their behavior, they bring the punishment of God upon the herd in the form of an epidemic.

231 The donkeys are small, square-built, strong, and steadfast. With nicely arched cruppers, a rounded neck, firm and fleshy shanks, they are very similar in shape to the zebra. Their coloring is a uniform light gray with a black cross over the back and shoulders. [492] They serve only to carry burdens, whereas oxen are only rarely used.

796 In the songs the following prayer is constantly repeated: 'Ng ai
782 atasala, 'j' oschiage somon, kiamon ag' ije kiamon eñ gera, eñ
[842] golobi en aischo, i.e., God, I implore you always: I pray, we pray
[539] to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaîn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogom, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a
[272] buffalo or cattle horn, drink a mixture consisting of milk, a cold
[237] extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a
[415] white powder obtained from the ol oiboni, while they say the /210/
[824] prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera!
[539] That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 If a small child of one not long detached from the warrior
783 standing dies, he not infrequently sees in it a punishment from God
[784] for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 The lineage of the El kiboron believes that the bones of the
826 buried corpses of their married men turn into snakes. They therefore
775 do not kill these animals, like the other Masai, but are happy about
613 their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

/211 cont./

789 amatory adventures. The powder also serves as love magic, in that
[832] the woman sprinkles herself and the man with it, through which his love for her is heightened. If a woman loses her first child soon after birth, she hangs in the doorway of her hut during her next pregnancy an amulet that consists of a few cowrie shells sewed on a small piece of leather and a little bag, made by the oi goiatiki, containing sawdust to protect the expected child from sickness and death. The
[824] plants preferred by the oi goiatiki for the manufacture of his magic medicines are: en gaiteto-ai (Commelina Merkeri K. Sch.), oi kioge (Courbonia virgata), en gujene (Cyathula Merkeri Gilg), oi amamiai (Oxyris tenuifolia), en wegi (Cordia quaensis), oi debbe (Acacia Merkeri Harms), en gadardar (Ochna Merkeri Gilg).

754 The belief in the evil eye, which makes human beings and livestock sick, is also generally widespread. One afflicted with the evil eye (arta gonjek) may not let himself be seen in the vicinity of the kraals. He is anxiously avoided by all people and therefore builds a kraal of his own, in which he lives alone with his family. If he ventures to enter a strange kraal, he must be prepared to be killed. If a human being or a head of livestock suddenly falls sick or dies without one's being able to explain this by natural causes, it is often believed that the reason for it must be sought in the doings of an evil sorcerer (oi oenkumonl). Only if such a one has not been
[784] in the vicinity for a long time is the misfortune traced back to a punishment from God.

/214 cont./

426 the full debts, not only up to the amount of the inherited property.
686 If a warrantor is liable for the debt, he must satisfy the creditor if
[672] the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a stool with the legs upward, or he wraps the legs of the stool or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries.
[584] The ol momai is a divine judgment. A person who does not grant the request expressed in the ol momai sign will soon be punished by 'Ng ai through death or illness. A person who did not grant the
[788] request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men whom he entertains with a head of cattle and honey beer. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

675 Loans or contracts are unknown. The creditor does not have
422 a right to the corpse of the debtor; neither debts nor misdeeds or
764 crimes committed by the deceased have an influence on the nature of his burial.

628 No distinction is made between murder and manslaughter, but
682 there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge carried out by boys and warriors or only by warriors. Any brother
[593] of the one murdered is first of all entitled to carry out the blood
[672] revenge and, further, any man belonging to the family. Blood

*539 *773 *171 *121 Biblical author merely inserted into the traditional framework of the primeval-age lawgiving the laws that were modified or had become necessary as a consequence of the sedentation, the changes way of life and outlook, with at the same time omission of the commandments that were lost for the same reason or pushed out of the favored position as a consequence of their reduced significance.

Some Further Points of Contact

In a mythical account the Masai show why dogs are regarded as unclean and live only on disgusting food; God himself condemned them to this.

*539 *773 *171 *121 231 In view of this, it seems noteworthy that the authors of the Jahve /Yahweh/ and Elohim doucments, that is, precisely probably the oldest sources of the Pentateuch, put into the mouth of God utterances through which dogs are represented as disgusting animals. Thus, the Jahvist /Yahwist/ reports in 2nd Moses /Exodus/ 11, 7: And Jahve said to Moses: "But against any of the children of Israel shall not a dog point his tongue, from man to livestock, that ye may know that Jahve makes a distinction between Egypt and Israel." And the Elohim Document states, 2nd Moses /Exodus/ 22, 30 /sic; see 22, 31/: "And ye shall be holy men unto me, and ye shall not eat flesh torn off in the field; ye shall cast it to the dogs (1)."

1. Cf. also 5th Moses /Deuteronomy/ 23, 59 /sic; see 23, 18/ male whores = dogs. F. Hommel.

*539 *773 *171 *121 • [184] Just as 'Ng ai punishes the Masai who transgress his commands by epidemics, so it is also Jahve's /Yahweh's/ nature to send plagues if the human beings otherwise do not want to submit to his will and complain about him. From the time before the lawgiving we know of the ten plagues by which Jahve forces the Egyptians to let the Israelites depart. Then later the wrath of God is turned against Israel. 4th Moses /Numbers/ 11 tells of a great fire in the camp at the place Tabera /Taberah/, as well as a great disaster among the people in Kibroth Hatthaawa /Kibroth-hattaavah/, the place of the graves of

The influence of the

791 medicine man is due to his supposed power of prophecy and
● 787 divination. No explanation is offered of this power, nor does it appear that the Laibons are believed to enjoy the acquaintance and assistance of definite spiritual beings; but they can foretell the future by such methods as throwing stones out of a horn, inspecting the entrails of slaughtered animals, interpreting dreams, and delivering oracles when intoxicated with honey wine. Great, however, as is their influence, it does not appear that either among the Masai or the Nandi, where similar institutions prevail, they have ever
[171] attempted to assume a position like that of the various small sultans of the coast or the kings to the west of Lake Victoria.

791 The most celebrated of these medicine men was Mbatian, the father of the present holder of the office, Lenana, who died about 1890. He is celebrated for having prophesied outbreaks of cattle plague and small-pox, which duly came to pass; and also for having foretold the arrival of white people. It is generally said that he bade the Masai be friendly to them, but Mr. Hollis could not find any corroboration of this statement. His death was followed by a disputed succession. There is considerable discrepancy as to
173 the details of the story, but, according to the versions taken
791 down by Mr. Hollis (p. 327), Mbatian told his eldest son
662 Sendeyo that on the morrow he would invest him with the insignia of a Laibon, of which the principal is an iron club. Lenana, the younger son, overheard, and presented himself before his father very early the next morning. Mbatian, who was very aged and had only one eye, behaved much like Isaac in similar circumstances, and gave his younger son the insignia, saying 'Thou shalt be great among thy brothers and among all the people.' In any case, Lenana succeeded,
791 and was accepted as Laibon by all the Masai except the Loita.
578 This created a division in the tribe, and as it roughly
619 corresponded with the division between British and German territory, Sendeyo was long regarded as the chief of the German Masai and Lenana of the British. But in 1902 Sendeyo quarrelled with the German administration, made his peace with his brother, and came over to the British Protectorate.

776 The religious ideas of the Masai, as collected by Mr. Hollis, are vague and unformulated. The commonest word for God is Eng-aï, which it will be observed is a substantive with a *feminine* article. Eng-aï appears to be used either quite indefinitely and impersonally of remarkable natural phenomena

Enyor sii 'n-gera 'l-ñganai-yok nalefig, einos sii 'l-tuñganak kituak, kake imme nalefig.

Nemeinos il-Maasae kulye-tōkitin opa, eton eata 'n-gīshu, kake einosita taata 'n-daīki pôkin oo-'l-meek, anaa 'l-paek, o ol-mishēli, oo 'l-mariko, oo 'n-gulye-daīki e-'n-gop, amu meata 'n-gīshu kumok anaa opa.

Pôki en-dōki nemeinos, e-matwa ake. Nemeinos il-mōtōnyi, oo 'singir[2], oo 'n-giri oo-'l-chañgit.

Children are very fond of various kinds of fruit, which are also eaten by the old people, but the latter do not care for them very much. 262

Formerly the Masai, when they had plenty of cattle, ate no other kind of food, but nowadays they often have to eat savages' food, such as maize, rice, bananas, and cereals, for they no longer own the vast herds which they formerly possessed[1]. [178]

They, however, do not eat everything. They eat neither birds, nor fish, nor the flesh of wild animals.

Il-chañgit.

Menya 'l-Maasae 'l-chañgit opa eton eata 'n-gīshu pôkin; kake eiter kulikae áinos taata 'l-chañgit anaa 'l-Torōbo, amu etumutate 'n-gīshu.

Wild animals.

The Masai ate the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo. [178]

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicines are ground. The medicine-men also use the horns to put stones in for their prophecies. 237 [914] [915] [787]

[1] It was recently estimated that the Masai in the Naivasha Province own 35,000 head of cattle and 250,000 goats and sheep. Those living in the Ukamba Province and in German East Africa are, however, much poorer, most of their cattle having died of rinderpest some years ago. [233] [184]

[2] The northern Masai sometimes use o-singir (pl. i-singiri) for a fish. The southern invariably use o-singiri (pl. i-singir).

Omens.

The Masai believe in what they term Il-tiloi, or omens. 787 825

If a man goes to visit a woman who is ill, and the bird which is called Ol-tilo[1], on account of its note, cries on his left hand, he knows that the woman is very ill indeed. Should the bird utter its cry on his right hand, he knows that the woman is on a fair way to recovery.

If a person visits a man who is unwell, and hears the same bird crying on his left hand, he knows that the man is only indisposed; but on the other hand, if a bird cries out on the right side of the road, he knows that the man will die. [963]

Again, if a man goes to fight or to raid and hears the Tilo bird crying on his right hand, he knows that he will be successful. Should the sound come from the left hand, he will return home again, as he knows he will be beaten.

If a man is going to pay a visit and hears a Tilo bird behind him, it

The medicine-men.

Medicine-men have four methods of divining future events.

The first is by means of a buffalo or ox horn. A handful of stones[1] is thrown in, and they know what is going to happen by the number which fall out when the horn is shaken.

The second is by examining the entrails of a goat which they slaughter. From what they see there they are able to predict that certain things will come to pass, such as epidemics, &c.

The third method is when they drink honey-wine and get drunk. They are then able to prophesy what will take place.

The fourth method is by dreams. They tell people what they saw in their dreams, and it is believed to be a prophecy. Should the dream not come true after an interval of some years, people cannot say it is

not correct: they must wait until the medicine-man tells them that the event is about to happen. 787

If the medicine-man is going to prophesy by means of the buffalo or ox horn, and there are people on the road, he tells those present that he will wait, as their feet will spoil his prophecy. They always know when people are coming, even if they are afar off.

When a medicine-man makes medicine, he gets drunk before he prophesies. He sings in parables, and the people reply. [533]

For instance, when the medicine-man named The father of Ngupe made medicine for the warriors of Kilepo before they went on a raiding expedition, he sang: 787 726 [533]

'The bulls that cannot move because they are so fat,
They will be beaten by Kilepo.
The bulls that cannot move because they are so fat,
Half of them have been captured.'

The warriors of Kilepo went on their projected raid against the people of Kahe[1], and captured half of their cattle.

They said: 'Thus prophesied the medicine-man.'

All medicine-men belong to the Kidongi family of the Aiser clan, and they are the descendants of Ol-Oimooja or of E-Sigiriaishi[2], the sons of Ol-le-Mweiya[3]. 791 614 [173]

the people to move their grazing grounds, 'for,' he said, 'all the cattle will die. You will first of all see flies which make hives like bees, then the wild beasts will die, and afterwards the cattle.' 791 787

Both of these prophesies have come true: the Europeans have arrived, and the cattle died.

Mbatian himself died while the cattle plague was raging (circa 1890). 791 173

When on the point of death, he called the elders of Matapato, the sub-district in which he lived, and said to them: 'Do not move from your country for I am about to die, and I will send you cattle from heaven. If you move, you will die of small-pox, your cattle will all perish, you will have to fight with a powerful enemy, and you will be beaten. I wish my successor to be the son to whom I give the medicine-man's insignia. Obey him.'

The elders said: 'Very well,' and left.

When they had gone, Mbatian called his eldest son Sendeyo[1], and said to him: 'Come to-morrow morning for I wish to give you the medicine-man's insignia.' 791 173 662

Sendeyo replied: 'Very well,' and went to lie down.

While this was taking place, Lenana, who had hidden himself in the calf-shed, overheard the conversation. He arose early in the morning and went to his father's hut. On his arrival he said: 'Father I have come.'

[1] Lenana is sometimes said to be the eldest son of Mbatian.

*648 175 Sir Charles Eliot's report.

In his report on the East Africa Protectorate, dated the 10th of June, 1901, Sir Charles Eliot describes the Masai as "perhaps the most remarkable people in East Africa. . . . . The greater number are still warlike nomads, who roam about over the Rift Valley and the plains between Kilima Njaro and Nairobi. . . . .

"The spread of law and order has somewhat curtailed their exploits, but the men are still all warriors by profession. . . . . .

"The Masai are found in both German and British territory. When the last Chief, Batyan, died, a dispute arose between his sons, Lenana and Sendeyo, as to the succession, and the tribe was divided. The former is now recognized as Chief of the Masai in the British sphere, and the latter of those in the German. Sendeyo has several times had trouble with the German authorities, but has always been defeated. Fortunately for us, Lenana's familiar spirit advised him that he had better make peace with the white men, because they were invincible, and he has proved our best friend and ally among the natives. In return, he receives £6 13s. 4d. a month, which is a very moderate stipend for a monarch of such considerable powers, both real and imaginary. Though I see no reason to anticipate that Lenana will change his present attitude, I regard the Masai as the most important and dangerous of the tribes with whom we have to deal in East Africa, and I think it will long be necessary to maintain an adequate military force in the districts which they inhabit."

[191 1987]

At this date, the Masai in the East Africa Protectorate had been placed in a district of their own, called the Masailand District, whose headquarters were at Nairobi.

Inclusion of Uganda Provinces in East Africa Protectorate.

By an Order of the Secretary of State for Foreign Affairs, dated the 5th of March, 1902, the Kisumu and Naivasha Provinces of the Uganda Protectorate were included in the East Africa Protectorate, and the Naivasha Masai therefore came under the control of the latter Protectorate.

Uganda Railway.

The construction of the Uganda Railway was commenced in 1895, and the line reached the Lake in 1901. Throughout the construction period the Masai gave no trouble whatsoever to the workers on the line.

Sir Charles Eliot's report, April, 1902.

In his report on the East Africa Protectorate, dated the 18th of April, 1903, Sir Charles Eliot writes:—

"I agree with those who do not think the Masai are a formidable element in East Africa. It would, of course, be unwise to irritate them, and there is always some danger of misunderstandings in dealing with a people of whose language we are profoundly ignorant. But it appears to me that, even within the last year, the Masai have become more amenable. They have taken to wearing red blankets, and the astonishing exhibitions of nudity, which were common a year ago, are now comparatively rare. Lenana even wears a greatcoat and is one of the judges at the Nairobi cattle show."

[191 198]

Later in his report he writes:—"The troops, which are under the direct management of the Military Department of this Protectorate, form the 3rd Battalion of the King's African Rifles . . . . . One company at Nairobi is composed of Masai. There is no doubt of the warlike powers of this tribe under their own system, but military authorities differ as to their qualifications for service in a disciplined army. Colonel Hatch's last report on their capacities is, however, very favourable, and his only criticism on them is that they cannot stand service on the coast. There are many advantages in employing the Masai as soldiers and police, for they are little disposed to cultivate, and if we are effectively to stop their ancient occupation of cattle raiding, we must give them something else to do. In some ways they answer very well: they are extraordinarily active, and have better notions of honour and loyalty than most tribes, but it would clearly be rash to trust too much to Masai troops and Masai police in Masailand."

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

abandoned, and, though meat and milk were still the main 885.
items of his eating, he could now vary it with vegetable food, [262]
obtained by his wife from neighbouring agricultural tribes.
Luxuries, also, he might now indulge in. He sported a [276]
fancy snuff-box and tobacco-box of ivory or rhinoceros' horn,
and delighted to rap up its contents as he handed it to a
friend. He chewed tobacco (mixed always with natron),
though he never smoked. Then, as often as convenient, he [273]
liked to foregather with his friends, and have a jolly carouse
over beer or mead.

It is pleasant to know that with this change in his mode 157
of life there was a corresponding alteration (very much for 574
the better) in his views of things. He delighted to talk with 439
the traders whom before he had gloried in killing or annoy- 885
ing, and would in token of good-will cordially exchange the
courtesies of life by spitting upon them and being spat upon.
In his conversation he showed an intelligence far superior to
any specimen of the Bantu tribes. He had no suspicions,
and was communicative about his affairs and beliefs. He
would even at times exercise a friendly guardianship of
passing traders, and was able to ward off many a disaster by
judicious warning. He was not stinted in his presents, and
generally gave far more than he got. He has been known
even to protect strayed porters, and tend sick men left behind

The softening down of his ferocity reacted upon his face. 885
The habitual scowl gradually died away, and was replaced by 771
a more pleasing and genial expression. His thoughts turned 787
more to the strange mystery of life. He, alas! had little
that was cheering to look forward to. He believed in the
existence of a Supreme Being, and yet had not the faintest
conception of an after-life. Unlike the men of the Bantu
races, he did not believe in ghosts or spirits. He had no
theory of dreams, and did not imagine like the negro that
when he dreamed he was really experiencing all that was
passing through his brain, and that his soul or spirit was
actually knocking around somewhere, having a good time of
it, unclogged by his body. Moran believed nothing of that;
indeed, whether he had any idea on the subject, I have not 885
been able to determine. When the man died, he was 761
finished utterly, except so far as he might go piecemeal to
build up the body of a hyena, a vulture, or a marabout stork.
The Masai believe in annihilation. To bury a corpse would, [764]
they think, be to poison the soil: it must be thrown to the
wild beasts without ceremony.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

The organisation of these deputations is actually a magico-religious rather than a political duty — that is, from our point of view — to the Masai it is just one aspect of the general theme of ensuring peace and prosperity to the area. 624

It will also be noted that there are very few duties which might be called executive. The laigwanan does not enforce judgments, or visit bomas collecting cattle for the laibon — the matters are discussed in open baraza and the weight of public opinion compels the individual to act as required. When this fails there is nothing to take its place. This explains why the laigwanak often make unsatisfactory paid headmen. Frequently the action required of a headman has not got this necessary weight of public opinion behind it, and consequently there is no indigenous method of enforcing an order. 626 624

The relations between senior laigwanak and their juniors are very lax. It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale communal efforts are required. In the old days when large groups of moran got together for raids the senior laigwanak must of necessity have asserted his position, and the others must have obeyed him, to ensure the success of the venture. With decreased opportunities of asserting his position, it is natural that the power of the laigwanan should itself decrease. 624 178

Another tendency to be noted is the manner in which laigwanak move from their areas, more especially during elderhood. A senior laigwanan of the Kiteto lives at Naberera, one from Engare Nanyuki at Ngorongoro, another from Engaruka at Piaya ,each at least a hundred miles away from the people they are supposed to lead. This is only another aspect of the break-up of the sections previously recorded, but it does illustrate the loss of old loyalties.

C. Other officials — the launon — magico-religious position — his duties — the ol buro engene — the losurutya.

At the unoto, or promotion ceremony, there is chosen an official known as the Launon, — *ol aunoni* pl. *il aunok*, — or Olotuno. He is acknowledged by all the sections which attend the unoto, as their ceremonial or religious head. The position is not popular, so the candidate has to be installed by compulsion. After appointment the launon takes on the mode of living of an elder, being given a wife and cattle by his age-set. 561 624

The duties of the position are obscure, but as far as is known the launon appears to be a sort of scape-goat for the age. If he flourishes and begets many children, and if his cattle prosper and increase, it is a bad omen for the rest of the age. But his adversity will indicate the age's prosperity. [787]

He must do everything in advance of his age-mates, marry, settle down, make the final payment that binds the marriage. It is as though the moran, standing on the brink of elderhood, send forth the launon as an explorer into the unknown country, so that any bad luck which may be awaiting them shall be focussed on one individual and not on the whole age.

/18 cont./

791 dare to appear unsummoned before the mighty one. Thus, the Masai living on the military station of Moschi /Moshi/ remained hidden during Zendeo's presence when the latter visited it at the beginning of 1896, and my Masai servant did not dare deliver a message either to Zendeo or to an attendant sitting beside him.

The aim of the chief's policy is the unity and strengthening of the Masai. By letting the rapacity of the warriors spend itself [648] in expeditions against foreign tribes, he protects his own people from devastating civil wars for which the endless friction of the districts among themselves would give continuous occasion. This influence makes possible for him the belief that a victory is attainable only through the secret power of the war medicine that he alone knows how to manufacture, and a defeat must inevitably come if he predicts it. Neither he nor his closest relatives go to war. He gives remedies against epidemics and sicknesses -- as a [755] rule in the form /19/ of magic medicines -- and orders supplication [782] feasts in honor of the Masai god 'Ng ai. He reads the prophecies [787] from an oracle game of the kind of the counting off of buttons. From a neat's horn provided with a leather cover (Fig. 1) he takes a handful of river pebbles, puts one or several of them aside, and throws back the rest. After he has repeated this several times, he announces his prophetic verdict, which often enough is worded in Pythian ambiguity. The game, like the lineage, is called en gidon. The office of ol oiboni is hereditary and has been handed down until the most recent times from father to the eldest son of the principal wife. The badge of his office is an iron club.

Fig. 1.

791 The Masai do not know much to say about the genealogical 613 tree of the El oibonok. The first four or five names that it contains 173 belong to chiefs who ruled in early times. These names are: 791 Kidonoi, Geriga, Bargumbe (Bamjumbe), and Lesigirieschi. The 175 next chiefs are historical and descend from modern times. The first of them, Kibebete, seems to have ruled at the beginning of the nineteenth century; he was followed by his son Sitonik, who

175 791 [755] [232] [173] [787] [648]

/21 cont./

recovery from their pains. Mbatyan earned outstanding merit through the discovery of a protective vaccination against lung disease of cattle. According to the corresponding accounts of Zendeo and four old Masai, Mbatyan, several years before his death, had already prophesied the appearance of rinderpest that did not take place until after it and the subsequent subduing of the Masai by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in childhood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard. That is, in contrast to the other men, neither the ol oiboni nor the el goiatek and el kiborón mentioned farther below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hairs. [826] [302]

791 621 [361] [595] [623]

The chief's village consists of a large number of kraals lying close together, several of which serve as the dwelling of the ol oiboni with his numerous wives. Mbatyan had about 200 wives; the still young Zendeo has only 20 of them. No strange man may enter these dwelling kraals of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (el dunganak oirorié ol oiboni) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the marches of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men wandering about idly in the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

791 576 609

/73 cont./

561 634 [791] [787] After he has counted off the little stones of his oracle game for a while, he decides that N., the son of M., is to become ol aunoni. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol [554] aunoni who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol borōr members there and, with these, again set out for the ol oiboni. Then a very large hut (os siñgira otunigi) is built there. When it is finished, the speakers take a number of warriors into their confidence and tell them who has been named ol aunoni. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon as this has been accomplished, a few of those standing around him [301] [291] push him down onto the stool, others place a string of blue ring-beads (ñ gonoñgo) around his neck, tie the spiral ear ornament made of copper wire (e surudia), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (e megiti) of the warrior, and in its place drape around him the long one of the married (the ol gela l ol moruak). Finally all those present cheer the new ol aunoni and cry out tadarawá jo ijōk eñ gischon, that is, remain poor, [556] bring us luck. The Masai in general maintain that every ol aunoni has remained poor: if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain denied him. But he does not need it, for every man under him is [431] obliged to give to the ol aunoni visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of foodstuffs always prevails.

After the ol aunoni festival is over, the other ol borōr members [574] [721] wander back home and celebrate a long meat feast (ol bul), whereupon they /74/ usually set out on a war expedition, while the ol aunoni himself goes back to his kraal and remains there.

764 [765] /201 cont./ Later, upon passing the place, one again throws a stone or a handful of grass on that spot where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being. [782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

766 [791] In contrast to the simple exposure of the corpse, that of a chief (ol oiboni), of a married man of the El kiboron lineage, and often [613] also that of a sorcerer (ol goiatiki) is buried. The bottom of a pit a meter deep is covered with a neat's hide moistened with fat, and [764] upon this the corpse is laid in the position described above. A [237] second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

/206 cont./

776 moon as masculine, corresponding to their word formation, eng oloń
821 and ol aba. That this view is not peculiar to the Masai, but was
[177] somewhat uncritically adopted by them is evident from the fact that to a question about the reason for it one is given a very childlike reply, if any at all. "The sun has to work all day, the moon only a few hours at night, consequently the overworked sun is probably a woman, corresponding to the earthly performance of work!" Others again have the sun and moon married; sometimes the former is the man, sometimes the woman in this marriage; it is only certain that both travel, one behind the other, toward the west, where the common hut stands in the clouds. Where the tendency toward personification
[177] of natural phenomena is peculiar to a people, one must expect that firm views exist at least about the most important and most frequent ones, and therefore the uncertainty in these explanations also shows that it is a matter of something that the Masai adopted, without having any understanding of them.

The first-born child of 'Ng ai, the girl Barsai, brings to human beings the greatest benefit, the rain, and thereby shows that God is satisfied with the doings on earth. His eldest son, Ol gurugur, announces through thunder and lightning that God is angry with human beings because of their bad behavior and at the same time admonishes them to improve. A rainbow is the sign that God is satisfied with the doings of the Masai and is therefore well disposed toward them. Wind and storm are the raging of a wrathful God. Hail announces coming
821 rain. A fireball (bolide) shows that now plentiful rain will fall and
787 that the people will be spared misfortunes, such as livestock epidemics and pox. A comet, on the other hand, means misfortune; sickness and death will befall human beings and livestock. Upon the appearance of a very bright comet in the eighties there soon followed the great livestock epidemic, rinderpest and tuberculosis.

821 The Milky Way is the path along which the children of 'Ng ai
776 wander as bright stars. From here they observe the doings of mankind and report on them to God. Other stars are his eyes; now and then one of them shoots forward from there toward the earth, in order to see more accurately -- a shooting star. Venus, which the Masai call en kilegen, announces rain through particularly bright

/206 cont./

821 light. The nubes minor and major /the two Magellanic Clouds/ are
[176] two lakes from which the cattle of 'Ng ai drink. The Pleiades
(ñ gokwa), through their rising in the west, announce the onset of
the great rainy season named after them. In Orion λ and the two
small stars beside it form a constellation called 'ñ golia = the
widows. The stars δ, ε, ζ, θ and the two small stars on a line with
it form another constellation. In it δ, ε and ζ are three el moruo
who are about to marry three widows. /207/ This constellation is
called 'ñ gapiak = the remarried widows, in contrast to the three
[176] 'ñ golia, who stand alone. The two large stars in Centaurus (ol
orugo) and the four principal stars in the Southern Cross are boys who
tend the cattle of 'Ng ai, which are represented by the small stars of
[187] the Milky Way. A ring around the sun or moon heralds rain. For
the warriors on an expedition this phenomenon is regarded as prom-
ising rich spoils. Just as sun and moon have made a kraal for them-
selves, so will the warriors on their way have to lay out such a one
for the captured livestock (1).

[823] 1. For the cardinal points (e' lubot Eng ai =
the sides of God) the Masai have the following
names: North = Kōpekŏb or Kāpekŏb, which
also designates the land of the original home.
South = o' mĕroi, i.e., the battle; it is the
direction in which the Masai traveling south
always had to endure new battles against the
long-settled el meg. East = engilebunoto eng
olon = the sun rises. West = endoijeroto eng
olon = the sun sets.

782 In case of distress, danger, sickness, or other calamities, all the
people pray to God. Otherwise the men say a prayer mostly only on
special occasions, whereas the women pray daily, mornings and
[184] evenings. Children do not pray at all in some districts, in others only
the girls pray, and in still others all children learn it at the age of
[823] six to eight, usually through their mother. In praying, one turns the
face to the north, or in the morning toward the rising sun and in the

/218 cont./

692 only in putting forward property claims, and then only in the rare cases in which self-help is not preferred to legal procedure. The prosecution of a punishable deed does not take place by official action, but only on the basis of a complaint raised by the injured party. Judicial proceedings are generally customary.

685 The procedure in the penal case of a livestock theft, which occurs frequently, is to be shown. It is to be assumed that an ox has been stolen in the pasture. If the boy tending the livestock observed the theft, he notifies the owner of the herd (father or brother of the herdsman) upon coming home in the evening. Otherwise the wives of the owner, in looking over the livestock, immediately notice the loss, since they know every head precisely. All the conversation in the kraal only revolves around the theft, and through that it becomes known on that same evening, not only in the home kraal, but also in the neighboring ones. The friends of the one robbed declare themselves ready to pursue the thief and track down the stolen head of cattle. If their investigation leads [692] to their discovering the ox or parts of it, so that the thief can be convicted, there are as a rule no judicial preceedings, since the perpetrator and his accomplices usually immediately declare themselves ready to pay the customary fine. If, however, the investi- [787] gation is without success, the person robbed turns to a sorcerer [694] (ol goiatiki), who, on the basis of an oracle (ená gidoó), gives him a description of the appearance of the thief, whereupon the one robbed will accuse of the theft a man who fits this description. The 695 one so accused appears in the following proceedings as defendant, 685 in the same way as, say, one who is charged on circumstantial [693] evidence. The one robbed selects as leader of the proceedings a respected old man who must have formerly once been speaker of [202] the warriors. This man determines /219/ the day and place of the [237] proceedings and has this announced by a crier, who goes to the neighboring kraals, draws attention to himself by blowing a kudu or oryx horn, and informs the approaching people about the matter. Further, the judge summons plaintiff, defendant, and possibly witnesses by messengers. If the defendant refuses to appear, he is forcefully led up by friends of the plaintiff. Anyone may appear a as a witness. Relatives of the defendant may refuse both to give

/220 cont./

695 685 ol mormai l ol gam, the ordeal of the bow. A bow is placed on the ground and a magic horn is set at either end of it. This is a goat horn that is filled with a medicine made by a sorcerer. As soon as the defendant has stepped over the bow, his lot will be, if he is guilty, the punishment of God, that is, in this case death. The effect of the ordeals rests on the firm belief in them. The guilty one is convinced that the punishment of God will have to strike him. He imagines that he is ill and sees his salvation only in an open [783] confession. He goes to the one robbed, confesses his deed, pays the customary fine, and begs for forgiveness. Only by gaining the latter can he escape the consequences of the false oath. The one robbed [572] must in this case -- if he himself does not wish to invite the punishment of God on himself -- grant the pardon and does so through words and spittings, whereby at the same time a friendship is initiated between the two. Besides the aforementioned ordeals there are two others which are not accompanied by curses. The ol mormai l ol origa l en gulugak or ol mormai l ol origa l ol gab = the ordeal of the stool made of earth. The defendant must sit down on a specially prepared lump of earth. If this crumbles under him, he is regarded as guilty. The other one, the ol mormai l ol gine (of the goat), is used only if the defendant is a non-Masai. The defendant, standing, takes a goat between his legs and cuts an ear off it. If the blood issuing from the cut spatters him, he is guilty.

The majority of the assembly decides whether and which ol mormai is to be used. The accused must submit to the ordeal, and, to be sure, only he alone. He may not substitute a proxy. It is never used against witnesses and plaintiff. The ordeal always constitutes the conclusion of the session, which the leader then terminates with the same prayer with which he began it.

If the ordeal has done no harm to the defendant within ten to fourteen days, he is completely cleared of suspicion. The one [787] robbed turns to a sorcerer (if he had already turned to such a one for the first proceedings, he now goes to another one), who again, through the ol gidok, gives a description of the guilty one. As soon as the one described is found, there are proceedings against him.

/220 cont./

Women are also entitled to make a complaint. Evidence presented by witnesses is valid only to the extent that the persons assembled for the proceedings wish to be convinced by it.

The crime of sorcery is only rarely dealt with in a judicial assembly. For the most part the one bewitched, after he has learned from an ol gotatiki the name of the bewitcher, prefers to induce the latter, through gifts, to bewitch him healthy again. Thereupon the two conclude friendship /221/ or, however -- and this not infrequently happens -- the bewitched one now kills his opponent, and, to be sure, without inviting blood revenge upon himself because of it.

There are no secret societies for the purpose of legal actualization or for other purposes. Her tens or the belief that the dead person will reveal the murderer in a dream are unknown. The Masai do not live with other peoples in such a relationship that the latter could demand or request expiation for murder or some other crime or misdemeanor committed by a Masai on a non-Masai. In this case, therefore, the deed remains unexpiated, whereas the Masai as a rule practice retaliation if the deed was committed on one of their people. Whether or not the murder committed on an Aní or an ol Kuafi by a Masai is expiated depends in each case on the greater or lesser degree of friendly relations that exist between the communities of the murderer and the one murdered. In most cases expiation does not take place, whereas if the injured one is a Masai, his fellow tribesmen will answer with war.

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 301

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [753]

[1] Amongst the Dinkas it is also customary for the medicine-men to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

When the Europeans came to these countries and the Masai saw them for the first time, they used to spit, for they said: 'We have never seen people like these.' They also called them medicine-men, and if a European gave a Masai medicine, the latter asked him to spit on him to heal him. Europeans were formerly called 'L-Ojuju owing to their being hairy.

[1] *Vide* p. 287.

[191] [13] [2] It is customary amongst the Bari people for old men (fathers or grandfathers) to take children's heads between their knees and spit slightly on them to bless them (Mitterrutzner, *Die Sprache der Bari*, p. xvi).

Whenever Masai warriors wish to go to the wars, they first of all visit the medicine-man, and as soon as he has given them medicine, they start. 726

When the old men are bidding their warrior sons farewell, they pour both milk and honey-wine on to the ground, 'for,' they say, 'God wishes it.' The women sprinkle the warriors from a milk gourd. [782]

On their arrival at the enemy's country, should the enemy offer fight, the warriors plant their swords in the earth and stand by them, saying at the same time: 'I am the son of

shows reluctance, as he may—for many shun election to the office— 561
he is seized by the boys and held until he agrees. Other boys set off 624
to relate the news to his family. When the family has been informed
the new *aigwenani* is presented with his badge of office called *ol kuma orok*—the black club. This club is made of olive wood. It must be quite straight and unlikely to break easily. It need not necessarily be black in colour. The club is blessed by the *il-piron* elders who spit [782]
honey wine over it; it is then blessed by the *ingopior* boys in similar fashion and handed to the *l'aigwenani*. He too is spat upon in blessing and prayers are offered that he may have strength, wisdom, and [431]
long life. Later the boys present their *l'aigwenani* with a heifer and a goat.

If at any time the boys go against his wishes, the *l'aigwenani* may resign by throwing his club to the ground before a meeting of the [627]
boys. Should they be dissatisfied with him they may make him resign by taking away his club. They may even take away the heifer if his offence is severe.

When the boys have elected their *l'aigwenani* the *il-piron* elders 561
take him, together with a few boys to visit the medicine man. The 624
medicine man always accepts the spokesman presented to him, and
prepares for him a special medicine called *ol oingonimyukia*—the red 789
bull. This the spokesman is made to drink; it is said to preserve him
from witchcraft of the medicine men. In addition, the spokesman is 791
given various charms for the benefit of the tribe. Possibly one is to prevent rinderpest in cattle, another to cause the cows to calve freely, another to prevent malaria. Usually the charms are sewn in leather bags and are always accompanied by very intricate instructions as to their use. All these charms must be paid for by those who expect to benefit. An instance was related to me of a ceremony held at Loitokitok in 1926 for which a famous medicine man Sandenyo supplied the charm. Its purpose was to prevent the old men of the tribe from dying until they reached a great age. Sandenyo received 49 heifers and bullocks in payment. The medicine man does not state his price but it is usual to pay generously for his services as he is a dangerous person to offend.

Obtaining charms from a medicine man is not a matter to be 789
undertaken lightly. Those who accompany the spokesman are always 791
people of proved intelligence and good memory. Charms are always given with much complicated directions as to their use. If any one of the instructions are overlooked the charm may be rendered useless or may even work evil against its users. The Masai sometimes find that their purchases do not have the effect they desire and report the matter to the medicine man; the latter never fails to point out where an error in the method of its use occurred—and probably effects

● 789 another sale! Sometimes circumstances prevent the immediate use
791 of medicines obtained: a drought for instance might make it impossible to collect people for the ceremony; in such a case the charm might get old and lose its efficiency; or perhaps the object of its use may be forgotten. If this happens the medicine is conveniently mislaid or is thrown away, but if so a report must be made to the medicine man, for he will have seen what happened to his medicine and will be angry, if its fate is concealed from him.

561 After some years the boys are circumcised, and become moran warriors. As soon as most of them are circumcised the *ingopior* plan
[361] to form into separate companies in readiness for residence in warrior villages called *imanyab*. Messages are sent and the warriors of all clans are called together by means of an *ol-amal* just as the boys did before the *endungore* ceremony. The number of companies, called *i'sirit*, to be formed, also the names to be given to them are decided on beforehand by the *ingopiri* warriors. After discussion a division is decided upon. One warrior representing each company to be formed leaves the assembly, goes a little way and striking the haft of his
[201] spear with his club to attract attention, he calls: "*En alo Il Mirisho*" or "*En alo Il Tetiauri*"—"This way the Merisho, this way the Tetiuri." The warriors then rise and join the man calling the name of the company they wish to join.

Groups of five will go together, to join the same company. A company may include warriors of more than one clan though as a rule the majority are of the same clan.

If the warriors of one clan are too few to form a separate unit they join the unit of another clan. If the clan is a very big one, the warriors may form two or even more *sirits*. Having joined a *sirit* a
[578 warrior may retract at any time before that *sirit* forms the first warrior
627] village. Once the warrior villages are formed, any warrior who leaves his *sirit* to join another, incurs the bitter resentment of the others. In some cases a fine of cattle is inflicted.

The *sirits* once formed, the warriors now approach the *il-piron* elders with a view to holding the ceremony of drilling—without which the first warrior village or manyata of new age-group may not be erected.

The *enthurgori* ceremony or the breaking of the fire stick, though it effectively holds up the circumcising ceremonies, is not finally bind-
[791] ing. It sometimes happens that the medicine man decides that a left-hand circumcision shall be held, in which case all the boys, the *Il piron* planned to make their special care, will be lost to them, for the boys will be circumcised to form one age with the ——— or right-hand circumcision moran.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

561 791 states that he went eleven times to Parrit before circumcision, numerous times after initiation, when Parrit was resident at Mondul, and six times to laibon Mbeiya. One cannot regard the figures as accurate, but at least they show that the laibon is in close touch with the developing moran and their guardians.

791 It has been recorded above that the third main function of a laibon is to lay down the ritual and to provide charms for *local ceremonies*, 789 concerned with fertility and disease (both human and bovine) and with rainfall.

Whitehouse's description of visits to the laibon for this purpose is of interest. "Obtaining charms from a medicine man is not a matter to be undertaken lightly. Those who accompany the spokesman are always people of proved intelligence and good memory. Charms are always given with much complicated directions as to their use. If any one of the instructions are overlooked the charm may be rendered useless or may even work evil against its users. The Masai sometimes find that their purchases do not have the effect they desire and report the matter to the medicine man; the latter never fails to point out where an error in the method of its use occurred — and probably effects another sale! Sometimes circumstances prevent the immediate use of medicines obtained, a drought for instance may make it impossible to collect people for the ceremony; or perhaps the objects of its use may be forgotten. If this happens the medicine is conveniently mislaid or is thrown away, but if so a report must be made to the medicine man, for he will have seen what has happened to his medicine and will be angry if its fate is concealed from him."

561 Most of these points are confirmed by Kissongo informants. The organisation of deputations to the laibon is one of the principal duties of 791 the laigwanak. I have heard it explained of various elders — "he always goes on *ilamal* as he has a good memory." The "complicated directions" usually involve the building of a boma, to which all the participants temporarily remove; the duration of their stay is laid down by the laibon. The charms given may be applied in numberless ways; they may be eaten or drunk, sprinkled or smeared over the bodies of those concerned. They may be mixed with decoctions of tree roots, with the fat of the sacrificial beast, or even with the *liquor animi* if the slaughtered beast is pregnant.

This slaughtering of a beast is the most usual ceremonial, its species, sex, colour and condition being laid down by the laibon. Examples of such types are — black bullock, black and white heifer in-calf, brown ram, pregnant ewe, etc., etc. The skin of the beast is usually cut up and divided amongst the participants. Such pieces of skin are termed *il keretin*, (sing. *ol kereti*) and may be worn on the finger, (a particular finger being named by the laibon) hung round the neck, or suspended over the door or bed in the house.

Other variants concern the situation of the boma, or the phase of the moon, so altogether there are an infinite variety of ceremonies which may be ordered.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

C. **Modern adaptation of the Laibonate — increase in local ceremonies — payment of fees — right to demand girls — extra-tribal contacts attitude of Masai to Laibon and spiritual matters in general — conclusions.**

178 791 The main factor altering the position of the laibon is the enforced prohibition of cattle raiding. As pointed out above, the supply of charms for cattle raiding was one of the Laibon's chief functions. The first effect of this change was to reduce the laibon's status, in addition to cutting off his main source of income. Some continued to draw glory and dividends by continuing the practice in secret, others, more loyal to the new order, sought for something to replace this loss. It is difficult to assess which motive was uppermost, love of power or greed for cattle, but whichever it was, the reaction was the same. It consisted of an intensification of another of their main functions, viz. providing charms for, and prescribing the ritual for, local ceremonies. This is thought to have been less important in the old days, but it is now the laibon's chief function and principal source of income, and as such merits attention.

791 The nature of the ceremonies has already been briefly described and with regard to their frequency, it is improbable that a year passes without some ceremony or other taking place in every area of the district. An aspect not yet touched upon is that of the method of collecting the fees paid to the Laibon.

791 561 In respect of the cattle paid for the *age grade ceremonies* their number seems to be laid down either by custom or by the laibon himself, (I am not sure which). They are collected by general agreement from the members of the age concerned, after long discussion. A point of interest is that members of the Engidong clan are not expected to contribute, but may add a 'present' of their own, e.g. in one instance encountered, in the proportion of 8 Engidong cattle to 40 from other clans. But what is very striking about these levies is that the Masai in general are seldom sure for what they are paying. When enquiring about a known mob of cattle, one may be told that they are the fees being paid by the Dwati age in respect of their Ngeherr ceremony, or by others that they represent payment by the Dareto age in respect of their Unoto, or promotion. One can only conclude that the general public do not really know for what they are paying; they have been told to contribute cattle, and do so without further enquiry.

791 789 In the matter of *local ceremonies* the situation is different. The idea of holding such a ceremony frequently arises from an old man having a run of bad luck — his cattle or children dying, or his wives not giving birth. He calls a number of his neighbours together, they discuss the situation and decide that a visit to the laibon is indicated — thus the movement starts. Other local ceremonies may be sought when the area in general is affected by drought or disease, or again the laibon himself may remind an area that he has not heard from them for some time. This may be done, for example, in the following manner: when the laibon is throwing the bones or is in a trance deciding some matter for a Naberera deputation, he will suddenly switch round and say, "I see the Moibo people

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL18
Kisonko

are in for a bad time." That is sufficient to ensure that a deputation from Moibo will visit him without delay. 791 789

Apart from specific payments for age grade matters, and the ceremonies obtained thereby, all the elders of an area are supposed to benefit from the performance of these local ceremonies, and consequently are expected to pay. It is an accepted practice that the Dalala age should not give cattle to be taken to the laibon, but are expected to provide hospitality for the meeting which is called to decide who shall contribute. At the meeting proceedings may begin by a man being denounced for refusing hospitality to an age-mate, and so in effect fined. Otherwise the matter is one for general discussion, X pointing out that he gave a beast last time, Y drawing attention to the fact that Z has not helped for many years, and so on. 791

These details have been included under the heading "Modern Adaptations," since one is so frequently assured that in the old days no such levies were made. It is asserted that the only occasions on which boma to boma levies were made was when a party of moran returned from a raid empty-handed, and were so ashamed that they collected beasts from amongst themselves to take to the laibon.

Another demand which a laibon makes on his followers is that he should be provided with wives. Some elders say that this is an age-old institution, others that it is a recent innovation. Be this as it may, motor transport is an innovation, and by getting round the country more, the laibon sees a greater number of suitable women, and consequently increases his demands. Parrit (15) is credited with collecting five girls as a result of the safari he went round South Masailand when the boundary was demarcated: the Dwati paid the dowry and arranged the weddings. Mbeiya (17), on a safari to Kibaya in 1937, demanded and was given the daughter of Lemauna, although she was engaged to another; Kapurwa (23) paid one beast towards the dowry and contributed the ram-skins for the wedding garment. When the girl was brought to Mondul, a number of milch cows were presented to form the nucleus of her herd. On the same trip, Mbeiya demanded and was given one girl from Simanjiro and another from Losogonoi. Taiko (18) is also alleged to have tried his hand at the same game, demanding the daughter of an old man at Sanya; the father asserted that it was just an ordinary marriage, but local Masai opinion thought otherwise. For when a girl is married to a laibon, she is regarded as lost to her family and clan. The usual relationship which marriage sets up between in-laws does not exist; one cannot approach a laibon for assistance as one can an ordinary son-in-law, nor can one expect a laibon to let either one's daughter or her children go home on protracted visits. 791 595 [177] [588] [614]

The introduction of Pax Britannica and of motor transport makes contact between the Masai medicine men and alien witch doctors much more possible. There always seems to have been a close association between the Kikuyu and the Engidong clan, so much so that we may reasonably suspect that the heaven-sent child ol-le-Mweiya was merely a Kikuyu impostor. But if, as one gathers, the Masai and Kikuyu were 791 177 494

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

laigwanan will be chosen for a large area, e.g. Naberera, including Engasumet and Ruvu. But later, as the number of recruits to the age increases, the *ingobir* of Engasumet and Ruvu will choose laigwanak of their own. These latter will, however, remain in a status of slight inferiority to the laigwanan first appointed. In their own areas they will be virtually independent, but at any communal gathering the senior appointment takes precedence. 561 624

This process of sub-division is important, as it not only gives a key to the really influential people, but also accounts for the fact that the areas of laigwanak vary from age to age. For instance, when the Dwati age was in process of formation, numbers were so few that in the whole of Tanganyika there were only three areas, Moibo, Kiteto and Engaruka. In the Dareto age, both the divisions and sub-divisions were more numerous, whilst the number of Kisale candidates justified even more appointments.

The visits to the laibon of the embryo laigwanak and ingobir appear to form a large part of their training. Even prior to the selection of a laigwanan, the leading youths are taken by the *il piron* elders, and the lengthy discussions which precede such visits must give the youths good practice in debate. Of these visits Whitehouse writes, "when the boys have elected their *l'aigwanan* the *il piron* elders take him, together with a few boys, to visit the medicine man. The medicine man always accepts the spokesman presented to him and prepares for him a special medicine called *ol oingonimyukia* — the red bull. This the spokesman is made to drink; it is said to preserve him from witchcraft of the medicine man. In addition, the spokesman is given various charms for the benefit of the tribe." It would thus seem, and my informants confirm, that the laibon has no power of veto over these appointments. [789] [791]

The official installation of the laigwanan may take place immediately after he is chosen, or it may be delayed. Thus in some cases it occurs before, and in others after, circumcision. An assembly is summoned for the ceremony; the ingobir of the moran and the *il piron* elders are the chief participants, but others drawn both from these and from the remaining ages are naturally present. A black club is prepared beforehand, which forms the centre of the ceremony. In some accounts a cow with a female calf at hoof is brought in, and its milk smeared on the right arm and on the club of the laigwanan, the divine blessing being invoked, and prayers offered that the new laigwanan may rule his people with strength and justice. Other accounts replace the milk with beer, and state that the milk need not be that of the mother of the calf, which incidentally the laigwanan keeps, but that it must be such-and-such a coloured cow. Again, others say that the club must be bound with green grass. The details are immaterial, but the ritualistic nature of the ceremony indicates that the office is regarded as one of permanency and importance.

The discussions preceding the choosing of a laigwanan never take place in the presence of possible candidates. For frequently they will refuse to undertake the work, and will run away if they know beforehand that they may be chosen. The chosen one may even throw down the

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Protecting Lost Cattle and Sheep.—If during the day cattle or sheep stray and cannot be found before nightfall, the following interesting ceremony is performed. There are certain men and women (they are not necessarily anything to do with medicine men or witch doctors), who have the power to protect straying cattle, and as soon as a herdsman discovers that some of his animals are lost and cannot be found before dark, he sends with all haste to one of these individuals. If possible the messenger should be a small boy, and he takes with him the staff that the herdsman of the lost cattle was carrying at the time. This staff is handed over to the person who is to perform the protecting ceremony, which is as follows:—The staff is taken and tied up with a leather thong removed from the "Protector's" waist, and is then placed at the head of the "Protector's" bed until the following morning. As an alternative, if there is no staff available, a cinder is taken from the fire and is placed in a cooking pot, the mouth of which is then covered with a skin dress belonging to the "Protector," and the skin dress tied down with the leather thong. In either case, while the tying is being done certain fixed formulæ are uttered by the "Protector." These may be translated as follows: "I tie the hyena's mouth," "I tie the lion's mouth," "I tie the leopard's mouth," "I blind the thief's eyes," etc. Once this ceremony is performed the lost animals are considered safe from all dangerous animals and from thieves. In fact, even the owner would pass right by them and not notice them, for they have become invisible. 233 789

Next morning the animals are "released" by the "Protector" and the owner can go out and find them at once. There is no fee paid to the "Protector" for performing this ceremony, but he (or she) should be given a little snuff. [431]

Driving Out Disease.—In the case of a serious outbreak of disease, one of the same "Protectors" is sent for to perform a "driving-out" ceremony. All the cattle and sheep of the infected village are brought together into the cattle enclosure and a ceremony called "*Chomo tomanangishu*" is performed. The "Protector" selects a young bull and a young heifer of about the same size and of the same colour (these two animals must be of a single colour and not pied or spotted in any way). He also chooses a small boy and a small girl. He then instructs these two children to drive the two animals slowly right round the outside of the enclosure and back through the entrance to the cattle again. This "going round" ceremony is accompanied by appropriate sentences by the "Protector" bidding the disease depart, and the ceremony ends. The "Protector" is given beer as a fee. After such a ceremony any cattle disease is supposed to die out quickly.

Preventing Mating.—Among the Masai it is a common custom to put a special shield on to bulls to prevent indiscriminate mating. This shield consists of a square flap of leather which is fastened just behind the animals' forelegs by thongs which come up over the ribs and are tied in the region of the animal's back. This practice is especially common when cattle from several villages are being herded together during the day. Then when the cattle return in the evening to their respective 233 232

884 The *Loita* and *Siria E-Unoto* ceremony took place in July, 1929, and lasted three days. They invited me to it, but, owing to pressure of political work, I was unable to arrive till the morning of the third day at about 10 a.m. (Pl. XIII, Figs. 1-3, and Pl. XIV, Figs. 1 and 2).

The Masai definition of the *E-Unoto* is as follows :—

"The *E-Unoto* is a religious ceremony of blessing of the age-group, after which the warriors have leave to marry.

"The *O-Singira* gives the warriors permission to have sexual relations with initiated women."

The warriors were dancing at the time (Pl. XIII, Figs. 1 and 2). After about an hour they went off to a spot about a mile away in the forest, where I was [789] informed that they sacrificed a bullock as a charm.[1] They returned about 3.30 p.m., [787] about twenty of them being dressed in a manner similar to that of the three functionaries (Pl. XIII, Fig. 3). They danced round the *O-Singira* hut, and those warriors who were entitled to enter it led their families up to smear some cow-dung on it. The warriors then squatted down in a close group in the centre of the *manyatta*, while some elders walked round them drinking honey wine and spraying it out of their mouths over the group as a blessing. Others of the elders sat by the *O-Singira* hut and refreshed themselves with honey wine. It was at this point of the proceedings that the age-group of warriors was named *Irimirim* (from verb *arim*, pierce). This terminated the festival.

561
884 The chief functionary is the *Ol-Otuno*, but I cannot say what part he takes,
624 having arrived so near the end of the ceremony. He is held in great reverence for ever afterwards, and it is unlucky for the age-group if a mishap befalls him. He must not take part in political affairs. He is always spoken of as *Ol-Otuno*, and his son, when he grows up, is known as the son of *Ol-Otuno*. (Pl. XIII, Fig. 3.)

There is a minor official called *Ol-Oiber engäne*. *Eng-äne* is a thong of leather. If my spelling of the first part of the title is correct it would perhaps mean "He who splits the thong." But there are several words from which it might derive, and I have no knowledge of his duties to assist me in checking my spelling of the name.

561 *O-Singira* (*Thingira*).—Being ignorant of Kikuyu I had been puzzled by this
346 word prior to reading Mr. Leakey's article. At the *Loita E-Unoto* it was built just within the eastern edge of the village. The village consisted of a circle of huts [361] about 300 yards in diameter. I looked in to the *O-Singira*, but it was too dark to [237] see anything. It was made of cow-dung plaster like an ordinary hut, but was much bigger. Ranged against the wall outside were the heads of numerous oxen which the warriors had slaughtered.

561
884 I was informed that 109 of the warriors had not had sexual relations with initiated women and could therefore enter the *O-Singira*. After the *E-Unoto* the

[1] Masai, *Endalingoi*, the general word for a charm.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

1775 The Masai know nothing of a life after death, but it is thought that *Laibons* may live on in the form of black snakes.

1768 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

1789 If a woman has lost her eldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl[1] that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o segingei* (the man of the iron wire).

1765 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

1757 *Sickness and Medicines.*—The Masai have their treatment for numerous diseases. Members of the Il Darsoero clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nang'a gotok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kiluretti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Enderit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

1773 *Honey Wine* (Masai *En-Aisho*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Mosori*, literally "the egg." To this are added the dried fruits of the Sausage

Functions of Laibons.—A *Laibon* is far more than a mere medicine man or purveyor of charms. His function would seem to approach more closely that of a chief priest of the Israelites, and the N-Kidongi sub-clan might be compared to the Levite tribe. 791

He is, or should be, the religious head of the tribe. No ceremony nor important enterprise should be undertaken without his blessing, in return for which he should be given a large present of cattle. He prays to God on behalf of the people. On one occasion Sendeyo arrived in my camp before sunrise, just as I was about to start on an excursion into the deep forest, and made a prayer for our safety. We stood round him and responded "*Na-Ai*" (= "O God") at the pauses; I was too much taken by surprise to remember the details of the prayer except that it was very impressive, and that he ended by giving his genealogy (*see* Hollis, p. 326) in order to show that the prayer was one which should receive attention.

The *Laibons* use charms (*indalingoi*) for various purposes, and their employment is invariably accompanied by prayer to God. I have a few of the charms in my possession and have been instructed in their use, under promise not to reveal my knowledge. Sendeyo once said to me that a good heart was better than charms. [789]

Witchcraft.—Although the *Laibons* use charms, witchcraft, *i.e.* harmful magic, is not indispensable to their office. Some of them, however, are alleged to have made use of it. Witchcraft is not indigenous to the Masai. Such persons as I have found practising black magic in Masai country have learnt it from the Kikuyu of Nyeri District or from the Meru. 754 [177]

Religion.—The Masai believe in one God whom they call En-Gai, which is the same word as they use for rain. They say that God is one, but permeates everything. He may be prayed to as inhabiting a wood, a stream, the earth, etc., but He is all the same God. The Masai only use short prayers such as "Na-Ai" (O God) and "Na-Ai mikiar" (O God do not strike me) except for the prayers at *Il Pul* and those of *Laibons* already mer ed. Some, if not all, of the ceremonies have a religious significance, but I canno details without further experience. 771 776

Superstitions.—There are certain old trees with holes in them, in which a Masai puts a handful of grass or leaves when he passes. They have told me that this is equivalent to a prayer, "May I live to be old like this tree." 789

A traveller sometimes puts a stone in the fork of the branch of a tree near the track in order that he may arrive at his destination before nightfall.

There are a few places where the passer-by should tie a knot in the grass. I am uncertain of the reason for this.

When the new moon is first seen people pluck grass and throw it towards the moon, saying, "*Injoki o sesen ol oado naaisho ol dorop*"="Give me the body which is long and I give you the short." I do not know the significance of this.

On the Masai E-Unoto. *By Edward L. Margetts, M.D., Associate Professor, Department of Psychiatry, University of British Columbia, Vancouver, B.C. (Specialist Psychiatrist to the Kenya government, Mathari hospital, Nairobi, 1955–9). With three text figures*

121 This note will supplement Lord Claud Hamilton's recent essay on the Masai *E-unoto* ceremonies, the details of which are not fully known, let alone witnessed and understood. The chief value [126] which can be claimed for the present article is the series of unique photographs which I was able to take of some of the ritual.

561 It was my good fortune to attend, over a one day period, that part [114] of the Masai *E-unoto* in which the sacred heifer is sacrificed and the morans receive the hide finger rings. The date of the ceremony was [789]

[text continues on p. 192]

[P. 192]

561 25 July, 1958, and the place was somewhere between Ulu
Kedong and Suswa, *i.e.* west of the Kedong River in the Rift
● 789 valley below the Kikuyu escarpment in Kenya. The gathering
site for the warriors was deep in the bush about two hours march
from the manyatta outside of which the O-siapiro hut was located.
Europeans in the party, in addition to myself, were Charles Hayes,
Jack Cockbury and Jeremy D. Lonn. About 300 moran, heads
shaved and reddened with ochre, carrying sticks instead of spears,
sat around in a huge circle. The forehead of each warrior was
rubbed with the heart of the slaughtered animal and then the
moran took a bite of it. Following this, a strip of hide, about four
or five inches long and one-half or one inch wide, pierced at one
end by a one-inch slit, was placed over the middle finger of the
right hand of each tribesman.

The magical significance of the heart and finger strip is not
accurately known. Nothing magical is ever very clear! The heart
probably signifies life and blood, and the binding of the warrior
to cattle, the life-giver of the Masai. The significance of the hide
strip is even more obscure, perhaps merely a symbol of brother-
hood and of the association with cattle but possibly of sexual
connexion (finger symbolizing male genitals, slit in skin female).
If the latter, the individual Masai would certainly not be
aware of this meaning, which would have originated long ago in
an individual magician's mind and have been observed for all
others over the years. Finger strips and rings, and wristlets, are
commonly (though not always) used as symbols of sexual union
in East African tribes, *e.g.* the Wakamba use a finger ring from the
[n1] knuckle hide of a goat as an amulet against male sexual impotence
(Margetts, personal observation) and, prior to marital sex, con-
summation the Nandi groom wears a gemskin ring on his right
middle finger and the bride a strip around her left wrist (Huntingfor
ford, 1953, p. 18).

After this day-long ritual the tribesmen returned late at night
to the manyatta, where further ceremony was carried out at the
O-siapiro hut.

[56] The fourth and last day is called "The Day of Shaving." Today the person who the hole ring off their son's finger and tie it to the scepter of the gourd which his mother uses for milk. On this day, too, each of the seven gives a black bead to the Ol-Oiner who makes them into a necklace. In later life, if one of the given ever does him any harm, the Ol-Oiner throws that one bead away—and the great dies.

[200] The final act of the ceremony is the shaving of the youths' heads. This is done in the same way as yesterday with the ax. It is a solemn, isolated and, operation and many a mother was in tears at the thought that her treasured son was no longer a boisterous youth and some even answer the shaven Kumon greeter offered by the elder male Masai.

/21 cont./

791 576 609 rises, goes toward him, and, with the customary greeting, extends his hand to him, whereby, not this, but the wrist is grasped. After the concluded discussion, for which there are no particular formalities, he takes his leave with the ordinary farewell.

791 • 789 [262] In the way of food, the ol oiboni takes only goat liver roasted on the fire, milk, and honey, for, through any other food, "he would suffer the loss of the capacity for prophecy and the preparation of efficacious magic charms." Of these arts very little is [173] supposed to have been handed down to his son Lenana and still less to Zendeo, through which it is all the more explicable that the /22/ Masai today tell of hundreds of different kinds of miracles that Mbatyan allegedly performed. According to them, he could fell large trees by sheer will power, or he had the hut in which he was to be found set afire by his attendant, and, after it had burned down, he appeared, uninjured, out of the ashes.

756 [613] From the En gidon lineage there are further supplied, as has already been mentioned, the sorcerers or medicine men (ol goiatiki, el goiatek), several of whom live in each district. Their office, too, is handed down from father to son, who, however, is usually initiated into the whole secret art only after his marriage. The [189] most important magic charm in the life of the Masai, the war medicine, the ol goiatiki does not know how to make. Rather, one turns to him only in cases of illness of human beings and livestock for which the well-known remedies fail, or which one traces back to the sorcery of evil neighbors, as well as to determine unknown wrongdoers (thieves, murderers, etc.).

613 [176] The lineage of the El kiboron of the El molelijan tribe, who, according to the view of all the people, are especially favored by 'Ng ai, the god of the Masai, which has made them primarily the bearers of the religious traditions, require a special discussion.

613 157 Corresponding to their position with 'Ng ai, they are distinguished by a relative peaceableness. The young warriors, to be sure, also set out on raiding expeditions with the other lineages, but they thereby seem to avoid any unnecessary roughness or brutality, in which the others often compete. The passion for disputes, quarrels, and vituperation, a prominent trait in the character of the young

/22 cont./

613 Masai, is foreign to them. God rewards them for their virtue by
[57] protecting their herds against predatory animals and thieves. It is
not supposed to have yet happened that one of their cattle was
613 killed by a lion or otherwise stolen. The El kiboṡ̌n are particularly
• 789 esteemed by all the other Masai on account of their ability to cause
821 rain. The author one day saw such a rainmaker at "work" near a
Masai kraal. He was lying on the ground under a big leather apron
such as is worn by old men, so that one could see only a slight
movement of the arms and now and then hear a soft murmur. After
a while he stood up and explained that rain would "soon" come.
Since I had had rain during the preceding night in the camp six
hours away, it is very probable that here, too, it had not failed to
appear for very long and thus saved the reputation of that rain artist.

613 The only slight differences in the customs of the El kiboṡ̌n
lineage compared with those of the other lineages will be discussed
in the individual sections.

361 In the vicinity of a few shade trees and a small brook the Masai
villages lie scattered in the burning hot steppes. They are circular
kraals (eiṅg ṡ̌i, iṅg aṅṡi or eiṅg aṅṡa, iṅg aṅṡ [Fig. 2]), which
are formed by a ring of huts (eiṅg aṡji, iṅg aṡjiṡik) built close to
one another. A kraal contains 20 to 50 huts. At two places
opposite each other are found the entrances (eṅ gischomi) three to
342 four meters wide. Since the Masai, as nomads, continue to live
361 in one place only as long as they have good pastures for their live-
stock, the huts are /Ill. 5 appears here/ built easily and casually
out of material available everywhere.

721 /93 cont./
726 forest meal (1),
297
[264]

1. Ol bul or, if an en dorosi has taken place, ol bul en dorosi, or, in short for that, en dorosi, with which the present-day language also designates every forest meal prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gadet. On the following day, ol ondjori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kahe boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol onjugi day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
714 to the carelessness or mistakes of the warriors. Furthermore, for the
791 spies sent ahead of the expedition, the ol oiboni gives them a few
• 789 amulets (e mascho ol oiboni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is snake eggs (mosser ol assurai). A large leg-bell (ol dualla kitok, Fig. 19) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the
726 medicine be hurled by a left-handed warrior. The speakers convey the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal; weapons, pots, and the livestock needed are gathered together, and two by two the es sirit set out together for the nearest bush. Whereas
[263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorosi in particular all the many vegetable agents that the

Fig. 19.

201 152 An expression of guilt, cunning, or jealousy can be recognized. If these feelings are very intense, the one conscious of guilt often holds one hand bent into a loose fist, in front of his mouth in such a way that the lower joint of the index finger lies crosswise below the root of the nose, whereas the jealous one appears surly and silent before he turns to violence. One who through cunning wishes to lure into a trap, to deceive, or to lie to another looks at him as little as possible: only now and then he gives him a more or less shy glance. The European will observe this especially often.

201 A low whistle is regarded as a sign to observe absolute silence; a blinking with the eyes admonishes the initiate to keep a secret. Warriors, for example, use the former during a night attack, brigands when a victim is approaching, thieves, etc., when there is danger in delay. One can often observe the latter in the case of one accused, when he is confronted with witnesses, and one also sees it not infrequently on other occasions when one /123/ questions a Masai and another one standing nearby wants the former to give false or no information.

Affirmation is expressed by a single, brief tossing back of the head and a simultaneous lowering of the eyelids. As a sign of negation the head is shaken laterally.

It has already been mentioned that one does not point at a person with the finger, but rather indicates the direction concerned with thrust-out tongue or lips or lower jaw. The index finger is [789] precisely the finger under the nail of which one may apply the magic medicine. This thought is also the basis of the threat with the index finger -- which is done as among us. -- The threat is therefore merely an ostentative display or holding of the finger, which can bring danger to the one threatened. One points to animals and inanimate objects, with the right arm extended, with the hand, while index finger and the middle finger are outstretched, whereby the tip of the latter rests on the nail of the former.

302

Fig. 62.

Fig. 63.

Ill. 48. Hair style el babet.

[412] a sharpened little piece of sheet iron which is called ol moronja (Fig. 62). Before the shaving the hair is moistened with water. [177] The head is usually shaved during the es sobia days, the 18th to 20th day of the month, so that on the unlucky day, ol onjugi, the 17th day of the month, the head is not bald. The shorn hair is tossed into the thorn fence of the kraal. Beard hair and such lashes [412] that grow back into the eye are plucked out with tweezers (Fig. 63 [ol budet]). An exception to this is made by the men of the El [613] kiboron lineage, who are not permitted to pluck out their beard hair [189] because otherwise they would lose their power, in particular the [826] supernatural one that enables them to bring and to conjure away rain.

775 /210 cont./
825 Allegedly they never bite the El kiboron people; on the other hand
826 the latter often use them as frightening devices against both Masai
613 and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Nenaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Nenaunir' is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise "Nenaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (es sétán), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and
789 the execution of special gestures. The aforementioned amulet ring
[751] (ol geretti) protects one against the effect of magic made by another
[754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The
[842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' eñ gebāta feast. The eñ goguroi is tied around the ankle and protects one from ailments of the legs. The ol durgeĭ
[751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorré protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

/211 cont./

789 amatory adventures. The powder also serves as love magic, in that
[832] the woman sprinkles herself and the man with it, through which his love for her is heightened. If a woman loses her first child soon after birth, she hangs in the doorway of her hut during her next pregnancy an amulet that consists of a few cowrie shells sewed on a small piece of leather and a little bag, made by the ol goiatiki, containing sawdust to protect the expected child from sickness and death. The
[824] plants preferred by the ol goiatiki for the manufacture of his magic medicines are: en gaitetojai (Commelina Merkeri K. Sch.), ol kioge (Courbonia virgata), en gujene (Cyathula Merkeri Gilg), ol assassiai (Osyris tenuifolia), os segi (Cordia quarensis), ol debbe (Acacia Merkeri Harms), en gadardar (Ochna Merkeri Gilg).

754 The belief in the evil eye, which makes human beings and livestock sick, is also generally widespread. One afflicted with the evil eye (erta gonjek) may not let himself be seen in the vicinity of the kraals. He is anxiously avoided by all people and therefore builds a kraal of his own, in which he lives alone with his family. If he ventures to enter a strange kraal, he must be prepared to be killed. If a human being or a head of livestock suddenly falls sick or dies without one's being able to explain this by natural causes, it is often believed that the reason for it must be sought in the doings of an evil sorcerer (ol osukutoni). Only if such a one has not been
[784] in the vicinity for a long time is the misfortune traced back to a punishment from God.

/313 cont./

*121 It also appears not impossible, however, that the image of the fall
*773 of man first developed from these views. At yet another point we
*171 find among the Masai the belief in a mysterious power of destruction
*539 inherent in the snake. I mean the custom according to which the
[825] warrior in battle hurls toward the enemy a leg bell that is filled with
[726] a mixture whose quantitatively largest and most effective ingredient
[789] is all or part of the contents of s snake's egg.

The Deluge

According to the myth of the Masai, God decided on the terrible punishment of the deluge when the wickedness of the human beings reached its height through the perpetration of the first murder. At that time there lived on earth a good, devout man named Tumnaiñot. God wanted to save him. along with his family, in order to preserve the good branch of the human race on earth. He therefore commanded him to build a wooden ark and to enter it with his people and a few animals of all species. As soon as everyone and everything was stowed away in the ark, the downpour began. After a time, when the waters had destroyed all living creatures outside the ark, God let the earth gradually become dry. Since meanwhile food had become scarce in the ark, Tumbaiñot wanted to find out about the level of the flood and sent forth first a dove, which showed him by its weariness in the evening upon its return to the ark that it had found no resting place, therefore the water must still be high. After a few days he then sent a carrion vulture, on which he had tied an arrow to a tail feather. When this bird returned in the evening, it lacked the arrow and the tail feather. Both could have been lost only because the arrow, after the vulture had alighted, was caught with its barb. When the waters had subsided, the ark landed in the steppe, where human beings and animals disembarked. When Tumbaiñot stepped out, he saw four rainbows, one at each cardinal point, as a sign that God's wrath had subsided. Of Tumbaiñot's six sons, the three from his principal wife founded the three tribes; the three from the other wife, the three lineage groups.

/362/

824 170. eng ĕrámrăm (Senecio longiflorus D.C.). Fodder for small livestock.

171. ol ĕramrăm (Cissus Oliveriana [Engl.] Gilg.). Fodder for small livestock.

172. ol ĕrbăt (Achyranthes aspera L.). Fodder for small livestock.

173. ol ĕrbăt kĕtĕ (Achyranthes spec.). Fodder for small livestock.

174. en ĕsĕrĕrĭmĭ (Cuscuta ontusiflora A.B.K.). Fodder for small livestock.

175. ol ĕsŭbĕnĭ (Helinus mystacinus [Act.] Hemsl.).

176. ol ĕtănŏk (Hoslundia verticillata Vahl.). Edible fruits.

177. ol ĕligŭrŭrŏnĭ (Pavonia Kraussiana Hoch.). Fodder for small livestock.

178. eṅ găbăllăsĕs (Boscia coriacea Pax.). Edible fruits. The Shrub is regarded as prized fodder for donkeys.

179. eṅ gadardar (Ochna Merkeri Gilg). Secret medicine of the ol goiatiki. Clubs and ear plugs are carved out of the hard, beautifully marked wood.

180. eṅ gailowai (Commiphora spec.). Fodder for small livestock.

181. eṅ gairĕtuai (Physalis minima L.). A few twigs are placed in the first bath of the newborn child as protective magic against sicknesses of all kinds.

182. eṅ gaisĕdjoi (Oxygonum sinuatum [Hochst. et Std.] Bth. et
[271] Hk.). Fodder for small livestock. These sorrel leaves are eaten along the way as thirst-quenching.

183. eṅ gaisĕdjoi ĕatŭa eṅ gare (Oxygonum sinuatum). The stems
[271] are chewed as thirst-quenching.

184. eṅ gaisedjoi kitok (Rumex abyssinicus Jacq.). Livestock fodder.
[271] The leaves are eaten along the way as thirst-quenching.

185. eṅ gaisedjoi os sobugo. Use like the above species.

186. ol gĕlĕ (Phaseolus aff. Schimperi Taub.). Fodder for small
[262] livestock. Children eat the roots.

187. eṅ gălŏschŏ (Oldenlandia Schimperi T. And.). If cattle have fever, they are given the plant, sprinkled with wood ashes, to eat.

188. eṅ gămărĭlăsĭs. As protective magic against lions, the person
[789] [825] spending the night alone in the open steppe or in the bush ties a twig on a stick and plants this in the ground beside him.

/367 cont./

824 275. ol jánǐ 1 oń guǎr (Dichrostachys nutans Bth.). The hunter seeking game in vain thinks he will quickly find it after breaking off a twig.

276. ol jánǐ 'njugǐ (Embelia Kilimandscharica Gilg.). Acts as a laxative and, in larger doses, is regarded as an agent for driving away taeniae and ascarids. The cold extract of two handfuls of bark is warmed and mixed with fat, meat broth, or milk before being taken.

277. ol jánǐ oibor 1 ol ogunja (2)

2. The plant is also called em bos 'l ogunja.

[789] (Heliotropium strigosum Willd.). Small-livestock fodder. The person spending the night alone in steppe or bush likes to toss a few plants into his campfire as protective magic against all kinds of dangers.

278. en jarū (Pennisetum ciliare Link). Good fodder grass for cattle.

279. en jgnĕ ǎmǎlǎsǐ (?). Good fodder for small livestock.

280. ol jerai (Acacia seyal Del.). It is one of the milder stimulants taken at the forest meals of the warriors. A piece of bark approximately a handbreadth wide and 20 cm. long is powdered and then steeped in cold water. This quantity is the simple dose per person per day.

281. ol jĕrtujǎn (Euclea spec.).

282. ol jŏgǐ kĕtĕ (Euphorbia velutina Pax.). Small-livestock fodder.

283. ol jŏgǐ 1 el aijok (Euphorbia spec.). In order to simulate
[826] a circumcision, boys smear the glans with the milky juice. The glans swells /368/ because of this and prevents the drawn-back foreskin from slipping forward.

284. en jŏgǐ ol aiteri (Cluytia spec.).

285. ol jŏgǐ sǎbug (Euphorbia Schimperi Presl.). Regarded as poisonous.

286. ol jŏgǐr. Good fodder for small livestock.

287. ol jŏgŏlǐǎn (Rauwolfia inebrians K. Sch.). The scabbard of the sword is made out of the wood.

/373 cont./

M 824 394. ol oja basēj = ol oija basēj.

395. ol ojeńgalāni (Sesbania aegyptiaca Poir.). The decoction of a piece of bark approximately ten inches square in size is given the cow to hasten the expulsion of the afterbirth, if this is protracted for an abnormally long time.

396. ol okitēni. The decoction of an approximately fist-sized piece of bark is regarded as loosening for catarrh.

D [824] 397. ol omej. Masai sometimes, El dorobo often, stick a branch of this on either side of the hut door as protective magic against predatory animals.

D M [825] [789] 398. ol ōmŏ. Valued by the El dorobo as a good honey plant.

399. ol oṅorua (Maesa lanceolata Forsk.). A nerve-stimulating agent of the warriors. They drink the decoction of approximately seven finger-sized pieces of the pungent-tasting root at the ol bul meals, as desired.

400. ol oṅoroṅ. The berries are edible.

401. ol ŏṅŭ (Andropogon Schoenanthus). The livestock do not like the grass, because of its lemon smell. In places the grass is used to make a diaphoretic tea that is given for fever.

402. ol oṅuṅoi = ol gitende (Haemanthus nov. spec.).

403. ol ŏrŏk olele (Justicia matamensis). Good fodder for small livestock.

M [825] 404. ol ŏrŏndŏ (Cissus Paraguensis Gilg). Warriors en route and especially during the forest meals like to put the vines into the bed padding, because they are said to keep away insects.

M 824 301 405. ol orowil kete (Justicia calcarata Hochst.). Fragrant neckbands are twisted out of the bark bast, smelling like vanilla.

406. ol orowil kitok (Justicia Fischeri Lindm.). Use like that of the preceding.

407. ol orowil l el aijok (Ageratum conyzoides L.). Use like that of the preceding.

D 824 301 408. ol orowil l el dorobo (Neuracanthus sacani Kl.). The El dorobo make fragrant neckbands out of the scraped bark.

409. eńg osida kitok. Good fodder for goats.

M 824 410. eńg osida gutok (Barleria ventricosa Nees.). El dorobo make arrow shafts from the branches.

D 824

/376 cont./

824 465. ol uai (Acacia spirocarpa Hochst.). The extract of an approximately fist-sized piece of bark is drunk as a remedy for diarrhea in human beings and animals.

466. ol ugunonoi (Heeria cf. pulcherrima Schwfth.). The extract of approximately two handfuls of bark is regarded as a remedy for diarrhea. One spending the night alone in the steppes chews [789] some bark and spits it out all around on all sides, murmuring [825] uscho-uscho. Then he lies down to sleep, feeling safe from the attack of nocturnal predatory animals.

[825] 467. Usche. The ol dorobŏni, before returning to camp, lays a few branches beside his hunting booty and through that regards it as protected from being devoured by birds and predatory animals.

468. ol wałŏł (Adenium obesum [Forsk.] Roem. et Schult.). The plant is regarded as poisonous for donkeys.

12:Dundas G-5 (ca. 1900) 1908 FL6 Dorobo FL6
Kikuyu FL10
Masai FL12

Supi is said to have instructed the Dorobo to bring him a pair of sandals made of leather having hair on both sides, the Masai to bring him a bull, the dung of which was pure white, and the Kikuyu an animal called Huko (a burrowing rat or mole).

The Dorobo cut off the ears of a donkey, and produced these as the required sandals before Supi; the Masai brought a bull fed on milk only; and the Kikuyu the animal called Huko.

Supi then told each tribe to take its respective charm and to attack the enemy separately and at different points.

The Masai, marching into Kikuyu from Naivasha, fell upon the strangers first, and taking all their stock drove them on to the Kikuyu, who in their turn drove them on to the Dorobo, by whom they were finally routed.

The Somali or Galla were thus disposed of, and only by the name Iregi, which was given to the generation that fought with and expelled them, and by a few women of their tribe, taken prisoners by the Dorobo, are we reminded of their settlements in Kikuyu. Amongst these prisoners may be mentioned an old woman called Barabio, who is still alive and resides in one of Burgo's villages. She was formerly Chief Karuri's nurse.

Needless to say the Masai kept all the cattle which they captured, and this caused a rupture between them and the Dorobo and Kikuyu, who joined forces and waged war on them. After a truce had been made the Dorobo and Kikuyu fought amongst themselves.

If the Kikuyu were to live and increase they had to cultivate the ground, and to do so they were obliged to destroy the forests. The very existence, however, of the Dorobo depended on the preservation of the forests, and hence arose a struggle for survival, which allowed of no compromise and could have but one end.*

In an incredibly short time the great primæval forests, the home of the Dorobo, were destroyed, and with them this interesting people ceased to exist as a tribe. Deprived of the means of living, many died, some took to cultivation, whilst the majority migrated to other regions, where they formed small colonies, such as are to be found at Baringo, Naivasha, Ravine, Kijabe, on Laikipia and Mau, at Taveta, in German East Africa, and even, it is said, in places as remote as Kismayu—(the clan that went to this last place was the Agumba). This scattering of the tribe accounts for the peculiar fact that Dorobo living in widely different localities speak the same language.† The Baringo, Naivasha, Kijabe, and Ravine Dorobo, and those of similar colonies will, if questioned as to where they come from, usually mention Kururuma and Kariran‡ as the birthplace of their fathers.

As regards the origin of this interesting tribe, we know little or nothing. There appear to have been two branches, the Agumba and the Okiek: the former hunted the game on the plains, the latter in the forests. They lived in pits dug in the ground and covered over with leaves of the wild banana; these pits may to this day be seen anywhere in the Kikuyu country, though of course they become more numerous the nearer one approaches the forest. They are also said to have buried their

* The first Kikuyu to come into the country appear to have been almost without exception pastoral, and they accordingly did not interfere at all with the Dorobo. The later arrivals, who seem to have possessed less stock, purchased from individual Dorobo the right to certain pieces of land or forest. For some reason or other just about the time the Somali or Galla were driven out, a sudden very pressing demand for grain appears to have arisen amongst the Kikuyu; this may have been due to one of two causes—the Kikuyu may have lost through sickness a large amount of stock, or there may have been just at this time a sudden influx of agricultural natives.

† Nandi. (In colonies not in touch with Nandi-speaking tribes, the younger generation is rapidly forgetting this language.)

‡ The country lying between the Rivers Boyo and Mathyuya in Kikuyu

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser clan, and are said to be descended from a personage called Ol-le-Mweiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

The influence of the
791 medicine man is due to his supposed power of prophecy and
787 divination. No explanation is offered of this power, nor does it appear that the Laibons are believed to enjoy the acquaintance and assistance of definite spiritual beings; but they can foretell the future by such methods as throwing stones out of a horn, inspecting the entrails of slaughtered animals, interpreting dreams, and delivering oracles when intoxicated with honey wine. Great, however, as is their influence, it does not appear that either among the Masai or the Nandi, where similar institutions prevail, they have ever
[171] attempted to assume a position like that of the various small sultans of the coast or the kings to the west of Lake Victoria.

791 The most celebrated of these medicine men was Mbatian, the father of the present holder of the office, Lenana, who died about 1890. He is celebrated for having prophesied outbreaks of cattle plague and small-pox, which duly came to pass; and also for having foretold the arrival of white people. It is generally said that he bade the Masai be friendly to them, but Mr. Hollis could not find any corroboration of this statement. His death was followed by a disputed succession. There is considerable discrepancy as to
173 the details of the story, but, according to the versions taken
791 down by Mr. Hollis (p. 327), Mbatian told his eldest son
662 Sendeyo that on the morrow he would invest him with the insignia of a Laibon, of which the principal is an iron club. Lenana, the younger son, overheard, and presented himself before his father very early the next morning. Mbatian, who was very aged and had only one eye, behaved much like Isaac in similar circumstances, and gave his younger son the insignia, saying 'Thou shalt be great among thy brothers and among all the people.' In any case, Lenana succeeded,
791 and was accepted as Laibon by all the Masai except the Loita.
578 This created a division in the tribe, and as it roughly
619 corresponded with the division between British and German territory, Sendeyo was long regarded as the chief of the German Masai and Lenana of the British. But in 1902 Sendeyo quarrelled with the German administration, made his peace with his brother, and came over to the British Protectorate.

776 The religious ideas of the Masai, as collected by Mr. Hollis, are vague and unformulated. The commonest word for God is Eng-ai, which it will be observed is a substantive with a *feminine* article. Eng-ai appears to be used either quite indefinitely and impersonally of remarkable natural phenomena

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

[P. 260]

PART IV

'OROT OO-'L-MAASAE

DIVISIONS OF THE MASAI PEOPLE

619 101 The Masai race is divided into two sections, the one entirely pastoral and the other partially agricultural. The pastoral Masai call themselves Il-Maasae, whilst their brethren are known as 'L-Oikop or Il-Lumbwa.

101 614 634 The Masai are further divided genealogically into clans and families, and geographically into districts and sub-districts, as shown in the following tables:

Clans.	Families[1].
'L-Aiser.	'N-Gidoñgi (the medicine-man's horns), Il-Parkeneti (the counters?), Il-Loghumaa, Il-partimaro.
Il-Meñgana.	'L-Aitayok, 'Siria (the designs?), Il-Marumaa (the priers), Il-Makuperia (the flesh on the ribs).
Il-Mokesen.	Il-Mokesen-sats, Il-Partalale (the long-sighted ones), Il-Tarteero, Il-Kiporum (the scars?)[2], Il-Tanap-dwure (the lion-killers).
Il-Mólelyan.	Il-Mólelyan-sats, Il-Mamasita, Il-Pujoe, Il-Kipuytai, Il-Moshóno, Il-Masaigua, Il-Mokoreve.

Whenever representatives of the four clans take part in a raid, it is usual to refer to the Aiser and Meñgana clans as 'L-oodo-kiloi (the blood-red cattle), and the Mokesen and Mólelyan clans as 'L-oreek-kiloi (the black cattle).

Districts.	Sub-Districts.
101 634 Kaputiei or Kaptiei.	'L-oodo-kilani (the blood-red cloths), Matapato, Il-kik-oonyokyo (the red trees[3]), Il-dale-le-kutuk (the fast talkers).
En-aipoeha (the lake).	Purko, Kinikop (the burning country?), Il-damat, 'L-oita.
Kisongo.	Maipo (the Pangani River), 'M-baashi (the valleys), 'K-oonyokyo (the red soils), Em-beghei (name of a tree[4] and light yellow), Il-isanyi (the mistake).

[1] Some of these families are again divided into smaller sub-sections.

[2] The members of the family called Il-Kiporum are said to be rain-charmers and rain-makers.

[3] *Rubdia ndimandaberiae*, Gilg.

[4] *Terminalia* sp.

[P. 91]

not moved: they must wait until the medicine-man tells them that the event is about to happen.

If the medicine-man is going to prophesy by means of the buffalo or on horn, and there are people on the road, he tells those present that he will wait, as their feet will spoil his prophecy. They always know when people are coming, even if they are afar off.

When a medicine-man makes medicine, he gets drunk before he prophesies. He sings in parables, and the people reply.

For instance, when the medicine-man named The father of Ngoye made medicine for the warriors of Kilepe before they went on a raiding expedition, he sang:

'The bulls that cannot move because they are so fat,
They will be beaten by Kilepe.
The bulls that cannot move because they are so fat,
Half of them have been captured.'

The warriors of Kilepe went on their projected raid against the people of Kaler[1], and captured half of their cattle.

They said: 'Thus prophesied the medicine-man.'

All medicine-men belong to the Kilongi family of the Ainor clan, and they are the descendants of Gi-Ginonje or of Il-Ilgirilaki[2], the sons of Gi-le-Kwaiya[3].

The story of the origin of the medicine-men is said to be as follows: Ol-le-Mweiya came down from heaven and was found by the Aiser clan sitting on the top of their mountain[1]. He was such a small person that he was first of all believed to be a child. He was taken by the Aiser clan to their kraal, where it was discovered that he was a medicine-man. He married and had issue.

Ore etaa en-náñ, náji 'n-gera enyena: 'Emindur te-'nna.' Ti-arski naa nája pe malam il-Aiser illo-doinyo.

When he was dying he said to his children: 'Do not move from this spot.' On account of this the Aiser clan do not go far from their mountain.

the people to move their grazing grounds, 'for,' he said, 'all the cattle will die. You will first of all see flies which make hives like bees, then the wild beasts will die, and afterwards the cattle.' 179 787

Both of these prophesies have come true: the Europeans have arrived, and the cattle died.

Mbatian himself died while the cattle plague was raging (circa 1890). 791 173

When on the point of death, he called the elders of Matapato, the sub-district in which he lived, and said to them: 'Do not move from your country for I am about to die, and I will send you cattle from heaven. If you move, you will die of smallpox, your cattle will all perish, you will have to fight with a powerful enemy, and you will be beaten. I wish my successor to be the son to whom I give the medicine-man's insignia. Obey him.'

The elders said: 'Very well,' and left.

When they had gone, Mbatian called his eldest son Sendeyo[1], and said to him: 'Come to-morrow morning for I wish to give you the medicine-man's insignia.' 791 173 662

Sendeyo replied: 'Very well,' and went to lie down.

While this was taking place, Lenana, who had hidden himself in the calf-shed, overheard the conversation. He arose early in the morning and went to his father's hut. On his arrival he said: 'Father I have come.'

[1] Lenana is [illegible]

Now disease broke out amongst Sendeyo's people, many of whom died, their cattle all perished, and they were defeated by the Germans; whilst those people who remained with Lenana did not fall ill, and they obtained cattle, as Mbatian had predicted. 173 578 791 628

The two rivals waged war for many years, and eventually Sendeyo was beaten. He came in 1902 to beg his brother to allow him to live with him, and peace was concluded between the two parties.

Before Lenana dies he will select whichever of his sons is acquainted with the work of the medicine-men to succeed him. 791

The principal badge of the medicine-man's office is the iron club[1]. If the medicine-man sends a messenger to tell his people anything, he also sends his club so that it may be known that the message comes from him. 791 293

Should a medicine-man strike anybody with the iron club, that [053]

supported by the 'L-oitai (i.e. the Masai of the 'L-oita sub-district, near Kilima Njaro), with whom he lived for many years. The warriors of the two parties frequently met in deadly strife, and raided each other's cattle. In 1902 Sendeyo gave up the hopeless conflict, and agreed to acknowledge his brother as chief. He now lives not far from Naivasha. Lenana himself says that he and his three brothers Sendeyo, Nellang, and Tolito were examined by their father a short time before the latter's death, and as he possessed a better knowledge of the work of the medicine-men than his brothers he was given the iron club, &c., and chosen by the elders as Mbatian's successor. [578] [175] [791] [173]

[1] On one occasion the iron club was lost. A messenger was sent by Lenana to the Government authorities at Nairobi, and when crossing the Uganda Railway he was overtaken by a train. He jumped on one side and saved his life, but dropped the club, which was never found again. His place was taken for some years by a small iron poker, but another club has now been made.

The smiths[1].

All Masai do not know how to make spears and swords; this is the work of the smiths. It is they who make the weapons, and the others purchase from them.

The smiths use in the forge a stone, a hammer, pincers, and bellows, and they make needles, bracelets, axes, anklets, weapons, and other things.

The iron which they work with they purchase from the Swahili, or they smelt the ore which they find in the bed of the Matapato river.

Every clan has its smiths; but there is one clan, the Kipuyoni, to which most men of this class belong.

The other Masai do not marry the daughters of the smiths, for it

564 191

[1] The Kunono and Dorobo seem to hold much the same position among the Masai as the Tumaloda (smiths) and Ramis (hunters) among the Somali. No free Somali enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumaloda are spread over the whole of Somaliland as the Kunono over Masailand, and no instance is known of them giving up the trade. Still more debased and poorer are the Ramis, who, like the Dorobo, live by hunting game. Cp. Ratzel, *The History of Mankind*, vol. ii, p. 494.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

these sections is evidenced at a superficial level by the adoption of a common tribal name. But members of a major section are more closely bound by their social, ceremonial and military relationships based on their common age-system. FOSBROOKE,[7] who did not consider the major territorial section as a unit of Masai territorial organisation, tries to explain as follows the Kisongo major section: "the majority of the Masai in Tanganyika regard themselves as Kissongo, but Kissongo is a very difficult term to define, for it is neither a sub-tribe, nor yet, strictly speaking, a section. The nearest definition is probably "that group of sections which follows the Mondul laibon".[8] See: below *laibon's* relationship to Masai social organisation. The early fieldresearchers, MERKER and HOLLIS, recorded the major territorial sections which they calle 'Provinzen' and 'Districts', respectively. MERKER,[9] gave their number as three: Kisongo, Loita and Ol Bruggo. HOLLIS,[10] counted five: Kaputiei (Kapite plains) En aiposha (Naivasha), Kisongo (south and West Kilimanjaro), Uasin Gishu and 'L-Aikipiak. He noted that the last two had practically ceased to exist. The point is also confirmed by S. L. HINDE.[11] The term *en-gop*, pl. *in-gwapi*, which HOLLIS translates as "the land, the country", seems to apply to these major sections. Their number corresponds, at present, to the linguistic groups we have reported.

The minor territorial section has been made the subject of special analysis by FOSBROOKE. He defines it as "a territorial unit of the Masai, the members of which regard themselves as owners of the waters and grazing grounds, to the exlusion of other sections. Such a unit is called *ol osho*, pl. *il oishon*. Alone or in groups the sections function as units in war, in allegiance to a particular *laibon*, and in performance of certain tribal ceremonies; in general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers".[12]

The absence of definite geographical limits and the stress on water and grazing rights have been noted. The *laibon's*, or prophet,

634 position in connection with the nature of the major and minor territorial sections is questionable. FOSBROOKE has put into evidence the marginal significance of the *laibon* for Masai social organisation. He has also shown how wrong it is to ascribe to the prophet's institution a political function. The prophet can only obtain a personal political influence which is his, and not of his office. Now, to describe the *laibon's* institution as the point of allegiance of territorial sections' members is tantamount to making the prophet a central political authority which he is certainly not. The important point in the nature of the territorial sections is members' consciousness of their strength and sufficiency as to be entitled to keep tribal ceremonies of their own.[13] In studying the Laitayok minor section FOSBROOKE brings that home: "in some areas they (the Laitayok) have been absorbed by the section amongst whom they resided, and thus eventually they came to be regarded as a clan; in other areas they were sufficiently numerous to enable them to retain their own grazing grounds, and to justify their holding tribal ceremonies of their own". FOSBROOKE insists on the fortuitous origin of the territorial minor sections. The point becomes obvious if the nomadism of the Masai and the absence of any centralised authority are kept in mind. People remain in a definite place only for as long as [221] they find good grazing and water for their cattle, but they move as soon as these fail, thus breaking up their territorial allegiance.

634 101 619 The following is a tentative list of minor territorial sections deducted from the literature:

SAMBURU.	1. Pusigishu	4. L'Orogishu	7. Longeli
	2. Masola	5. Doiju	8. Nyabarei
	3. Lukumai	6. Mwesi	9. Loimusi
NJAMUSI.	According to DUNDAS,[14] there are only two villages: Njemps Kubwa or Njemps Liabori – down stream; and Njemps Ndogo or Njemps Lekepir – up stream.		
KAPITI.	1. Kaputiei or Kapiti	3. Ladokilarsi	6. Purko
		4. Kakonyuke	7. Loita
	2. Damat	5. Dalalakotok	8. Matapatu

[13] One should note here that tribal ceremonies are ceremonies connected with the institution of age-sets, a fact which sheds light on the integrating power of the age-system. See BERNARDI, *The age-system of the Nilo-Hamitic Peoples*, in *Africa*, 22, 1952, pp. 316 ss.

[14] DUNDAS, *Notes on the Tribes inhabitating the Baringo district*, in *J. R. A. I.*, 1910, p. 43.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

the Central Council being the Appeal Court. In the thirties, the system was again modified, and there are now two regularly constituted tribunals in each of the two Kenya Districts, Narok and Kajiado, in the Masai reserve, and an Appeal Tribunal in each district. It Tanganyika changes came later. Only in 1938 the Paramount Chief was abolished and a new system introduced. There is now a Masai Council, acting as the Appeal Court from the six Local Courts established under the authority of a Headman. Lord HAILEY, commenting on the Tanganyika system, remarks that "the whole of the juridical organisation seems on a tentative basis, and in practice it functions irregularly, owing to the nomadic habits of the people". This is more or less true also for Kenya. It is a fact that, in Kenya and Tanganyika, the Masai never accepted the authority of the *laibon* or prophet in terms of Paramount Chief, and that they dislike the idea of a formally established court.[34] Nomadism, as Lord HAILEY points out, has much to do with this attitude of the Masai, but it is their social structure which has no place for such institutions. Whatever political authority exists among the Masai, it is established on the structural basis of the age-system. This system has a dynamic character which can hardly be reconciled with the rigidity of any administrative system imposed from above by the Governement.

The institution of the Masai prophet has been described by FOSBROOKE, p. 13. He distinguishes three types of *laibon*. "First there is the private practitioner who, for suitable remunerations, will perform such service as curing sickness, removing barrenness and ensuring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a ceremonial to be utilized to the advantage of the whole group. Such prac-

[34] Writing of the Native Authority System in Kenya after 1918, Lord HAILEY says in *Native Administration in the British African Territories*. Part I — *East Africa: Uganda, Kenya, Tanganyika*, London 1950, p. 171, "these Tribunal were not generally recognized by the Masai who preferred that such issues as arose between them should be settled in the customary manner by the Headman or Elders". *And with regard to the over-development do ovim*, p. 178, that "the preference for referring cases to the arbitration of local headmen or elders persists". He makes a similar comment for Tanganyika on p. 204: "in the Masai District the majority of the issues arising between the tribesmen are settled by arbitration".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

756 tices are alleged to be efficacious for the above-mentioned complaints,
791 and may also prove useful in procuring success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonials affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes." Therefore, it is clear first that the prophet is essentially a private practictioner, and secondly that his promotion to the higher stages of the practice derive primarily from his personal skill and good luck which give him reputation and, hence, influence on tribal matters. It is significant, however, that the prophet, even when he has reached the highest stage "retains the duties of the two previous stages", in other words, he does not cease to be a private practitioner. Therefore, the title "Chief which FOSBROOKE also uses, does not properly describe the prophet's office and makes it Medicine Man", more formal than it really is. [85] It is for the same over-formalisation that our early authorities and the Administration were misled in the evaluation of the prophet institution. [86]

III – PRELIMINARIES TO THE INSTITUTION OF THE AGE-CLASS

561 The age-system of the Masai consists essentially in a structure of age-classes distinguished from one another in terms of seniority. An age-class is instituted as the final result of a long course of initiation ceremonies, performed during an official approved time.

The age-class must be distinguished from other minor groups such as the age-units. These are formed at different stages of the initiation course as intermediate steps to the establishment of the age-class. The age-class follows from the merging and unification of two age-units.

The Masai term for age-class is *old aje*, pl. *il ajijik*; for age-unit, *el porer*, pl. *il porer*. [87] These terms are frequently rendered into

[85] Indeed FOSBROOKE is unable to decide wether the laibon is the chief medicine man of the section or tribe.

[86] See also below, and on the relationship of the prophetinstitution to the structure of the age-system as a whole see BERNARDI, l. c., pp. 322, 331.

[87] MERKER, l. c., pp. 70 ss.; HOLLIS, l. c., pp. 132, 261 ss.; LEAKY, l. c., pp. 191 ss.; FOX, l. c., p. 449; FOSBROOKE, l. c., p. 28.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

important to note their temporary and personal function. In this connection one should also noth that, however complex the organisation of the age-unit may appear, its character and nature is entirely democratic. The importance of the *ingobir* as a council to the *sigwenan* has never been stressed sufficiently. Although their office is not very well defined, it is a fact that they may exercise a real control over the leaders of the age-unit whom they have power to degrade. [144] 56 624

The following diagram illustrates the internal structure of the age-unit.

VIII – THE FUNCTION OF THE AGE-UNIT

The most apparent function of the age-unit is military. This is also the aspect stressed by all our authorities, so much so that it is commonly stated that the function of the age system is military. [145] The evidence we have just analysed suggests a somewhat different description. 56 701

We have already noted that the initiates do not become war-

[144] The relationship of the prophet, laibon, to the structure of the age-unit and age-class is illustrated below in connection with the latter. [791]

[145] Cf. for all others FORBROOKE, *l. c.*, p. 32: "The basic function of the age-grade system is doubtless military".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 624 respect by all his age-mates. It appears that there is only one such officer for the whole class as there is a single performance of the *ngeherr* proper.

XI – THE PROPHET AND THE INSTITUTION OF THE AGE-CLASS

561 791 "There can be little doubt", writes FOSBROOKE,[176] "that at this time (i. e., in pre-European times) a *laibon*'s chief functions were: i. dispensing charms for raids; ii. supervising and blessing the age grade ceremonies; iii. propounding the ritual and giving charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall".

He also remarks,[177] that "although the supervision of the age grade ceremonies has been recorded as an important function of the *laibon*, this activity is subject to curious restrictions, the principle of which I have been unable to ascertain".

It seems to me, on the basis of the foregoing analysis, that the function of the prophet in connection with the institution of the age-units and the age-class is marginal and secondary to the authority of the *piron*-elders, and that it possesses a wholly ritual value. The authority of the prophet does not find a proper place in the structure of Masai age-system. This system is the principle which restricts his activity.

Whenever one of the inititation ceremonies is held, a delegation of the *piron*, both elders and candidates, approaches one of the prophets for his blessing. According to FOSBROOKE's information it does not matter whether the sought prophet is a prophet of the territorial section where the ceremony is performed or of another section or even an "unofficial" *laibon*.[178] The same con-

[176] FOSBROOKE, *l. c.*, p. 15.

[177] FOSBROOKE, *l. c.*, p. 17.

[178] FOSBROOKE, *l. c.*, p. 17. The passage continues as follows: "For instance the *Ngeherr* or passing out ceremony of the *Dorsio* age-set (class) of the Kisongo section was nominally held under Parrit, and the *Uncie* or promotion ceremony of the *Kiesie* age (age-unit) under Mbeiya, who were respectively the ruling laibon at the material times. But in fact an old Kikuyu adopter of the Engideng clan, one Lelukwa ole Kashunga (now deceased) was called to assist in both these ceremonies. By agreement the Mondul *laibon received* the fees in respect of these ceremonies from the Ranerera and Kihaya areas, whilst those contributed by the Mondul and Longido Masai went to Lelukwa at Bisil, Kenya Colony. In another case, Sangeyan, laibon of the Kiesie age for the Matapato and Lodokilani sections, which are nominally under Kimurani".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

tact with a prophet is established before a raid. All these delegations are expected to pay the prophet a number of cattle contributed by the age-set's members they represent. The responsibility for collections of this kind is one of the main duties of the leaders.[179] 56 79

The authority and the influence of the prophet do not extend beyond these contacts. The elders alone are responsible for the organisation of the initiation ceremonies and hence for the institution of the age-class.

However, in his description of the *laibon* FOSBROOKE assumes too much. He writes,[180] " On evidence which need not be recorded here, it seems certain that the Masai, whose age grade custom so closely approaches that of the Galla, were possessed of their present military organisation prior to leaving their original home.[181] Thus it appears that the *laibon* is a later adaptation imposed on a self-sufficient organisation of government through age-grades. Probably much of the confusion of function which exists today, the indefinite division of governmental authority between the *laibon* and the age-set leaders, is due to the adoption of an institution (namely, the *laibon* hood, B. B.) incompatible with the original culture. It would be wrong to regard the institution as being foreign to Masai nature, but it is probably true that it is a feature which had not found its true level in the tribal structure when European influence intervened ". [171]

The assumption that the Masai age-system is related to the Galla age-system is frequently taken for granted but up to the present, nothing definite has been ascertained on this point.[182] On the basis of our present analysis we agree with FOSBROOKE's conclusion on the secondary character oft he prophet's function in the institution of the age-class.[183] But we find it difficult to agree with him when he states that " the age grades " have been the channel through which the *laibon* institution came to be established as an [171] [114]

[179] It frequently happens, remarks FOSBROOKE, *l. c.*, p. 18, that the contributor does not know exactly the reason for his contribution. *Of course he* relies entirely on his leader.

[180] FOSBROOKE, *l. c.*, p. 12.

561 institution of Masai culture. We are much inclined to think on
● 79 different lines. The office of the prophet is essentially a ritual office.
[114] His true power derives from his ritual value. It seems evident from the preceding analysis that Masai political and social structure is primarily based on the age-system. We think that it is solely for this system that the *laibon* did not entirely succeed in invading the political field and usurping the authority of the elders.

That the function of the prophet is essentially foreign to the age system is a fact which the present analysis may also have helped to make evident. The conclusion arrived at by FOERBOOKE on " the incompatibility " of the *laibon* institution " with the original cul-
[114] ture " of the Masai is one that could only be properly reached after an historical and critical study of Masai ritual and religious institutions and not merely from a survey of their political and social institutions.

XII – THE RELATIONSHIP OF CLASS-MEMBERS [***]

561 A strong bond of solidarity is felt by all members of a class.
574 Such feeling is primarily due, as is natural, to the mere fact of belonging to the same social body. Other factors, such as a more or less equal age and the contemporaneous performance of essential initiation ceremonies give substantial cause for a feeling and bond of that kind. That such a bond is strong and effective is clearly shown by Masai hospitality customs. They show also what force of cohesion springs from the age-system structure. Any class-member has a right to stay and live at the house of any of his age-mates. While he is a stranger to the place, he is not a stranger to his age-mate for they are members of the same class. The latter cannot refuse him, otherwise he would be cursed by his own class. This
[526] cursing power of the age-class is very significant to our present purpose. It shows the authority and power possessed by the class for keeping its structural cohesion and for defending itself from any disruptive attack. [***]

[***] MERKER, *l. c.*, p. 47; HOLLAND, *l. c.*, p. 480; FOX, *l. c.*, p. 168.

[***] Masai hospitality customs are best described by HOLLAND, *l. c.*, pp. 287 s. Translating, as he does, direct Masai accounts, he writes: " When a Masai goes to other kraals to pay a visit, he does not on his arrival enter a hut unless he knows the owner, for if he belongs, for instance, to the *Aimaer* age, he must not enter the hut of one of the *Kishamo* age, as he does not belong to this age. He will ask where the huts of the members of the *Aimaer* age are, and when he

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose sphere of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oibani," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 224-230, and it is unnecessary to enter into it here, but it may be mentioned that Ilutian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and, at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify. The medicine-men. 991 ● The Laibon.

The pastoral Masai "Morans" in their constant wandering tribes combined with their ceaseless activity in following the pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. Then eventually European penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the cattle which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 300,000 head were counted. By March 1914, all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 400,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighbourhood of three-quarters of a million. These latter figures are the estimates of Mr. E. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,000 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains untenanted on that account, no attempt having been made to utilize veterinary skill and treatment to rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 45,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilized tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock. The Masai as a pastoralists. 833 821 698 [330] [131] [161] [134] [171] [264]

On the 1st of July, 1896, the remainder of the British sphere between the Zanzibar and Uganda boundaries and the Tana River and German frontier was placed under Her Majesty's protection, and this area, together with those Protectorates which had previously been established on this part of the East Coast, were fused into one administrative whole under the title of the "East Africa Protectorate." The western boundary of the Protectorate in the Masai country was the Kedong River, and while Laikipia was in the East Africa Protectorate, Baringo, Njemps, Nakuru, Elmenteita and Naivasha were situated in Uganda. East Africa Protectorate. 195 248

In November, 1896, a large caravan consisting of some 1,000 Swahilis and Kikuyu was cut up by the Masai in the Kedong Valley on its return from Eldoma Ravine, to which place it had been sent on Government duty. Nearly all the Swahilis lost their lives but a fair number of the Kikuyu escaped and reported the incident to Mr. Gibbons, the officer in charge of Fort Smith. Mr. Ainsworth, the Sub-Commissioner, left Machakos for Fort Smith and he, together with Mr (now Sir Frederick) Jackson, who hurried there from Naivasha, conducted an enquiry into the matter, at which it was established that the Swahilis were the aggressors, the headmen having taken two girls from a Masai kraal. These had been handed back as a result of representations made by the Masai, but a renewed attempt to capture them had been made the following morning before the caravan started on its journey. This attempt was unsuccessful but a shot was fired in the village which killed a cow, and the Masai attacked the caravan as a retaliatory measure. Kedong massacre.

Mr. Andrew Dick, an English trader who was travelling in the neighbourhood in company with two Frenchmen at the time of the massacre, attacked the Masai and succeeded in capturing them from a number of cattle, but he was killed by the Masai in his retreat up the Kikuyu Escarpment. Mr. Andrew Dick.

As a result of the enquiry into these two incidents it was held that the Masai had been acting under such provocation that no great punishment was necessary. They had lost a considerable number of men in their encounter with Mr. Dick, and the only punishment that it was considered necessary to inflict was the confiscation of the cattle that had been captured from them by Mr. Dick, which cattle were paid to the relatives of the Kikuyu who had lost their lives in the massacre as compensation for the loss sustained.

One important result followed the "Kedong Massacre." Lenana, the Masai Laibon, who had for some time expressed his intention of visiting the Government officer at Fort Smith, had overcome the reluctance shown by his followers, and had actually arrived at that station just before the news of the massacre reached Mr. Gibbons. There he was instructed to stay until an enquiry had been held, but when the result of the enquiry was known he was so impressed with the impartial hearing given to the Masai witnesses, and with the justice of the decision, that he vowed allegiance to the British Government, a vow which he faithfully kept. British justice on this occasion gained the friendship of the most powerful man in the Masai tribe, and rendered his influence warmly loyal to the administration from that day to the day of his death. Lenana's first visit. 195 248 791

The Masai in the East Africa Protectorate were situated in the Province of Ukamba, of which they occupied the northern portion, and established the district known as the Kenia or Kikuyu District. The following extract is taken from Sir Arthur Hardinge's "Report on the Condition and Progress of the East Africa Protectorate from its Establishment to the 30th of July, 1897," and once again describes the fallen position of the Masai at that time:— Sir Arthur Hardinge's report. 195 248

"The Masai consist of one entire tribe, the Naivasha or Kisongoyo Masai, whose King or Chief is Lenana, and of the broken remnants of seven other tribes, the Dogodoni, Sudu, Lagwenti, Matapato, Kaputei, Gidamda and Kapte Masai, who, after long terrorising the whole country have at last been defeated and broken up by the superior force of the Wakamba and Wa-Kikuyu and, having lost their old military organisation utterly shattered, have accepted, and to a great

#648 175

Sir Charles Eliot's report.

In his report on the East Africa Protectorate, dated the 19th of June, 1902, Sir Charles Eliot describes the Masai as "perhaps the most remarkable people in East Africa. . . . . The greater number are still warlike nomads, who roam about over the Rift Valley and the plains between Kilima Njaro and Naivasha. . . . .

"The spread of law and order has somewhat curtailed their exploits, but the men are still all warriors by profession. . . . . .

"The Masai are found in both German and British territory. When the last Chief, Sotyan, died, a dispute arose between his sons, Lenana and Sendeyo, as to the succession, and the tribe was divided. The former is now recognized as Chief of the Masai in the British sphere, and the latter of those in the German. Sendeyo has several times had trouble with the German authorities, but has always been defeated. Fortunately for us, Lenana's brother spirit advised him that he had better make peace with the white men, because they were invincible, and he has proved our best friend and ally among the natives. In return, he receives Rs 12k. ad. a month, which is a very moderate stipend for a monarch of such considerable powers, both real and imaginary. Though I see no reason to anticipate that Lenana will change his present attitude, I regard the Masai as the most important and dangerous of the tribes with whom we have to deal in East Africa, and I think it will long be necessary to maintain an adequate military force in the districts which they inhabit."

At this date, the Masai in the East Africa Protectorate had been placed in a district of their own, called the Masai District, whose headquarters were at Naivasha.

Inclusion of Kisumu District in East Africa Protectorate.

By an Order of the Secretary of State for Foreign Affairs, dated the 4th of March, 1902, the Kisumu and Naivasha Provinces of the Uganda Protectorate were included in the East Africa Protectorate, and the Naivasha Masai therefore came under the control of the latter Protectorate.

Uganda Railway.

The construction of the Uganda Railway was commenced in 1896, and the line reached the Lake in 1901. Throughout the construction period the Masai gave no trouble whatever to the workers on the line.

Sir Charles Eliot's report, April, 1902.

In his report on the East Africa Protectorate, dated the 18th of April, 1902, Sir Charles Eliot writes:—

"I agree with those who do not think the Masai are a formidable element in East Africa. It would, of course, be worse to irritate them, and there is always some danger of misunderstandings in dealing with a people of whose language we are profoundly ignorant. But it appears to me that, even within the last year, the Masai have become more amenable. They have taken to wearing old blankets, and the astonishing exhibitions of reality, which were common a year ago, are now comparatively rare. Lenana even wears a greatcoat and is one of the judges at the Kaimbi cattle-dance."

Later in his report he writes:— "The troops, which are under the direct management of the Military Department of the Protectorate, have the 3rd Battalion of the King's African Rifles . . . . . One company at Naivasha is composed of Masai. There is no doubt of the warlike pursuits of this tribe under their own system, but military authorities differ as to their qualifications for service in a disciplined army. Colonel Hatch's last report on their capabilities is, however, very favourable, and he only criticises on them is that they cannot stand service on the coast. There are many advantages in employing the Masai as soldiers and police, for they are little disposed to mutinous, and if we are effectively to stop their pastoral occupation of cattle raiding, we must give them something else to do. In some ways they answer very well: they are extraordinarily active, and have better endurance of hunger and hardship than most tribes, but it would clearly be rash to trust too much to Masai troops and Masai police in Mombasa."

before Mr. Gilfoy, the District Commissioner of their decision. They said that, as their Lakiaki wished them to move, they were ready to go if the Governor ordered them to do so, but that they did not wish to leave Lakiaki. As this was their determination, no attempt was made to influence them, no pressure was put upon them, and the subject was not again broached to them.

On March 7th, 1911, Lemana died. He had been suffering from dysentery for a month, but was getting better, when he suddenly collapsed. The Resident District Commissioner in charge of the Northern Maori Reserve, Mr. Cross-Hood, was with him a few hours before his death, and discussed various minor questions with him. Lemana did not mentioned his movement, or in the matter with the Maori Lakiaki, for he only realized a short time before he died, that he had been had come, but, when he felt he was dying, he made the following speech in the presence of numerous witnesses:—

"Tell the Government to look after my children and to give them the money which I should have earned if I had been alive. Tell my people to obey the Government as they have done during my life. Tell the Lakiaki Maori to move with their cattle to the Lake Plains."

April 3rd was fixed upon as the date for a meeting with the Maori representatives of both the Northern and Southern Reserves in order to select a successor to Lemana. Rauhuroi, the senior elder of the Northern Maori, was too unwell to proceed to Ngaruawahia, but he delegated his powers to two of the members of his clan. Lagiakiko, with the other heads of the clans and the representatives of the various sub-grades from the Northern and Southern Reserves, were present, and the proceedings were watched on behalf of the Government by Mr. Lyon, Provincial Commissioner of Rotorua, Mr. Hulme, Secretary for Native Affairs, and Mr. Cross-Hood. Raggi, Lemana's oldest surviving son, a youth of thirteen years of age, was unanimously chosen as Lakiaki. Owing to his youth, it was decided to appoint two Regents to assist him in governing his people, one for the Southern and one for the Northern Reserve. Rapuroa, a cousin of Lemana, was selected as Regent for the south, and Lagiakiko for the north. When these ceremonies were concluded, Lagiakiko stated, on behalf of the Northern Maori, that he wished to ask that they might be permitted to move to the extended Southern Reserve. This change of opinion was undoubtedly due partly to the dying wishes of Lemana and partly to a fear of disruption between the two sections of the tribe. On the other representatives expressing a like request, the Maori were informed by their Provincial Commissioner that they would have to proceed to Rotorua and approach the Governor personally on the matter.

Sir Percy Genaunt held a meeting with the Maori representatives on April 3rd, 1911, in Rotorua. Lagiakiko, as spokesman of the Northern Maori, again stated that it was their wish to move to the extended Southern Reserve. The Governor repeated that, if the move were to take place, it must be a voluntary one, that the Maori were completely free to accept or reject the proposed arrangement, and that, if they did reject it, the pledges made to them by the Government in 1904, would be scrupulously adhered to. They thereupon replied that it was their own wish that they might be allowed to move. A formal vote was declined, and another meeting was held on April 4th. The members of the Executive Council and the Provincial Commissioners were summoned, and, in the presence of all, the Governor asked the Maori whether or not they wished to move to the extended Southern Reserve. The reply was again in the affirmative. Several minor points were then discussed, Lagiakiko acting as spokesman. The principal further was the water question. The Maori stated that, if the Government would help to improve the water supply, they themselves would contribute towards the work by the payment of labour. They requested that all Europeans should be removed from the area, and that as much as possible of the area known as "The Freehold Land," which had been applied for by Mr. Percy Cobb, should be given to them. Protection from possible fresh spite was asked for and granted. Finally, the Maori begged to be allowed to start the move as soon as they was sufficient grass along the routes, and asked that their angle not be hurried. They were informed in reply, that the move was contingent on the approval of the

character and great reputation as a medicine-man, but even his influence does not extend throughout the Parks and Lake districts. The Council provided over by Sandon also possesses a certain measure of authority, but these two present the only instances where respect is given and the respect shown to them rests in the direct custody to the personalities of the individual possessors and not to the system which they represent.

The population of the Maori Reserve numbers not much more than 10,000 of whom the great majority are Maori, but which also includes a considerable number of poor or half-caste Kikuyu. The indigent Jews left by the Maori population possess considerable attraction for the neighbouring Kikuyu, who being less wealthy, are under the necessity of performing agricultural and manual labour either by their reserves or on adjacent lands. For many years, the Kikuyu and Masai have engaged in trade, and their lands being contiguous, they have had ample opportunities for intercourse. To actually their conditions of an idle life, regardless of individuals from Kikuyu to Maori, poverty have been of not infrequent occurrence and the Maori Reserve therefore contains many assimilated units, mostly among the divisions known as the Kaputei and O Dala Lekerak.

The policy of the Government in dealing with the native tribes in the East African Protectorate has been to develop their agricultural contacts and industry and to discourage tendencies towards pastoralism. This policy has been pursued with success among the Kavirondo, Kikuyu and other tribes who, when encouraged by the administration were under the necessity of engaging in agriculture and has been introduced with fair results into the system of such pastoral tribes as the Masai and Lumbwa, but with the Maori it has been a total failure. Though encouragement has always been given, the Maori have shown no inclination to old-herd, and in the only recent cases where gardens have been prepared on the initiative of Maori owners, the labour employed was drawn from the Kikuyu tribe.

The increased activity in recruiting natives as gaders for the Centre Corps occasioned by the military situation in March and April, 1941, led to the emigration of a number of Kikuyu from their own country into the Maori Reserve, and these emigrants, with a view to securing residence, signed agreements to work as servants for Indians, Somalis and Maori. Colonel Somerville, then Military Commissioner for Labour, represented that, while such evasion of their duties was highly reprehensible in regard to the employment with Indians and Somalis, any system which absorbed of Kikuyu working for Maori was open to the gravest objections on both administrative and economic grounds. The question of such Kikuyu emigration to the Maori Reserve and therefore was discussed in Executive Council in June, 1941, and was referred to the Chairman of the Special Committee appointed to consider the "Southern Reserve Bill," but no decision on the matter has yet been reported.

In view of the general desirability of discouraging such emigration of Kikuyu natives, the policy has been adopted in the Maori Reserve of preserving all Kikuyu living in that reserve who cannot claim by long residence to circumstances rights to have become Maori, and of returning them to their own reserve. This policy applies to the cases of all those Kikuyu who have joined the Maori since the march from Lumbwa. Efforts have also been made to repatriate all Kikuyu who [illegible] Maori.

An important step in the revision of the system of Maori administration was undertaken early in 1939, when for reasons mainly connected with the personality of the Indian, the Acting Governor recommended that the office of Paramount Chief of the Maori should be abolished.

At the time of Lenana's death, in 1937, Sagal was still a boy and control over the Maori was exercised by the two regents, Karuru and Lugalishe. When Sagal came of age and assumed the duties assigned to him in the capacity as Paramount Chief, he was given an appointed total but proved himself to be totally unsuitable. He lacked energy, physique and moral courage; he was hesitant and unscrupulous; he appeared to regard any administrative function as an

supplement duty and to look to the Government to assert for him his position as the Paramount Chief of the tribe without exerting in return any effort or energy on his part. The Ngaitonga, of which division he was a member, and which was one of the smallest divisions in the tribe, acknowledged him as their chief, but the Parku, the most important division in the reserve, regarded him with open contempt, while the Lolin, Hoia and other divisions did not recognise him at all, and he refused to attempt to assert his authority over them. The position was, therefore, that the Government stood alone in recognising Seggi as the Paramount Chief of the Maori, and that, as such, he was of very little use to the administration.

Lolinas

A complication arose in this connection by the practice which had previously been followed of regarding the Chief Lolinas or medicine-men of the Maori as the Paramount Chief. Lemana, the father of Seggi, had been the Chief Lolinas and his functions as such had been to arrange the rainfall, direct raids, provide medicine in connection with various ceremonies and to undertake other duties of this description. Subordinate to him there had been the medicine-men of the various sections. When, about 1900, the Government began to establish closer relations with the Maori, Lemana had evinced a strong tendency to friendship and had personally been to a great extent responsible for the good feeling which came into existence. The administrative officers at that time, not being fully conversant with the constitution of the tribe, had been inclined to look upon Lemana, not only as the chief medicine-man, but as the Paramount chief also, and as time went on this dual authority came to be generally accepted as in consonance with Maori tradition. Further, in consequence of the always during his lifetime of adequate Government control over the administration of the tribe, it had been essential to support someone who could keep the Maori in order and to grant him more or less autocratic powers. In fact, however, the tribal organisation of the Maori does not provide for such a position as that of paramount chief, and the influence which Lemana had exercised over the tribe had been due solely to his position as the Chief Medicine-man which his astuteness and strength of character had helped him to magnify.

Notwithstanding the fact that the Government officially recognised Lemana as paramount chief, the Agreement of 1904 referred to him as Lolinas and not as the paramount chief, while, on the other hand, in the Agreement of 1911, Seggi was styled "Paramount Chief of all the Maori." The phraseology of the latter Agreement is incorrect, and there is no doubt that in the minds of the Maori, Seggi has no authority as Chief elsewhere than among his own division.

Functions of Paramount Chief and Medicine-men

In making recommendations for the abolition of the office of paramount chief, Mr. Bowring drew attention to the fact that the functions of a paramount chief and of a chief medicine-man were incompatible. As paramount chief, Seggi was expected to endeavour to maintain order and to assist the Government, while as chief medicine-man, his whole trend of thought must of necessity be reactionary and secretive and he, together with all the other medicine-men, must realise that any real progress on the part of the tribe could not fail to undermine their influence.

The issue of Maori

Mr. Bowring advocated the continuance of the system of government of each division through its own local elders and local council, under which system Seggi would take his place among his own elders but would not be concerned with the administration of the rest of the tribe. It would be difficult to prevent the perpetuation of the existence of medicine-men if the tribe wished to preserve them, and he thought that a preferable policy would be to instil a desire into their minds for progress and development in which case these survivals of barbarism would eventually disappear. The Maori were a very conservative and suspicious people, living in a vast grazing area, and the task of awakening them to a more enlightened train of thought, onerous as it was, was rendered all the more difficult and tedious by the unnecessary obstacle which had been placed between the administration and the tribe in the form of a paramount chief, who had no place in the constitution as evolved by native custom and tradition. He was therefore confident that the abolition of that office would offer the Maori better security than the existing system and he was convinced that it was more in accordance with the opinion of the Maori themselves.

*648
231

essential problem before the Government at the present time in dealing with the Masai is how to turn this annual increase into a realisable asset. The proposals for imposing upon the Masai a tax of two rupees per head of cattle per annum, approved by the Governor in January, 1916, fell through mainly owing to the impossibility of procuring a market for the quantities of almost worthless stock that would have been produced in payment, and it is difficult to see how this objection is to be overcome unless some much more marketable commodity is produced. Purchase by local residents and firms of the kind of Masai stock that would come in as a result of the imposition of such a tax would in all probability be very limited in extent, and no business firm has yet come forward with proposals for taking over such stock for canning or export by other means. It has not yet been proved or disproved that such Masai stock is marketable for the purposes of human consumption, but it is a fact that much of the stock from the Masai Reserve produced for slaughter by the military authorities was returned as unsuitable, and while it is extremely improbable that the Masai would be able to pay their tax in cash, it is only reasonable to expect that the worst stock would be paid in in lieu of cash where that was unobtainable.

Problem of taxation.

The problem, therefore, appears to be as follows. If the necessary staff is provided, a tax can be collected from the Masai at the rate approved which will bring in stock assessed at £100,000 annually. Of the money realised, £30,000 is to be devoted to works in the Masai Reserve which will so improve the conditions therein as will not only render it capable of maintaining a larger number of stock, but will also so alter the conditions as to make it probable that a higher grade of cattle could be supported in the reserve. When this last step has become effective, it may reasonably be assumed that a market will be forthcoming for the cattle paid in as a tax, but it is not yet proved that it will be possible to realise the value of the stock collected in the earlier years. A trial alone can demonstrate this.

*648

Masai as an asset to the Protectorate.

Enough may now have been said on the subject of the potentialities of the reserve, but it must also be borne in mind that, of the proposed cattle tax, one half of the proceeds are to be paid into the general revenue of the Protectorate, and that it is a matter of concern not only to the reserve, but to the Protectorate as a whole, that the proceeds of the tax should be forthcoming in the shape of a realised asset as soon as opportunity occurs. The Masai have hitherto paid a hut tax at the rate of three rupees per hut, which sum, amounting to less than £3,000 per annum, has not covered the cost of their administration, but the proposed tax will not only cover the cost of the administration of the reserve, but will leave a considerable balance for the general development of the Protectorate, while the needs of the Masai Reserve can be attended to to the fullest extent of which the staff is capable.

[551]

461
464

Masai residing in the reserve.

Of the Masai residing within the reserve, the most that can be expected of those who are not tending cattle is that they will help in the performance of the public works which are destined to be undertaken therein. Hitherto they have not been employed on such works, as manual labour does not appeal to them, and it is indeed doubtful if such a change will be brought about in their temperament as to induce them to perform this. That the position may not be hopeless is perhaps suggested by the fact that certain sections of the Nandi tribe who had until recently maintained an attitude similar to that adopted by the Masai, commenced manual labour last year, and a corresponding change for the better may still occur among the Masai.

177
[591]

Power of the Masai.

Conditions have so greatly altered in the Masai Reserve during the last few years that the power of the medicine-men as a class has greatly decreased. The insistence on education for the Masai may further enlighten them, may undermine their conservatism, and may encourage them to discard their prejudices. An organised movement to show the Masai the development that is going on around them and to drive home to them the fact that unless they progress they are bound to disappear in the circumstances attendant on the introduction of civilisation may have its effect in eventually bringing them to a conception of their duty. The Masai problem has not yet been tackled, but the prospect of rendering them useful citizens of the Empire is not entirely without hope.

Prior to the meeting, Mr. Hollis visited the Uasin Gishu Native Reserve and several of the adjoining farms and obtained the following information. The Uasin Gishu Masai in this area numbered in all between 1,000 and 1,200 souls, and paid tax on 240 huts. They possessed 14,000 head of cattle and 10,000 sheep and goats. 4,000 head of these cattle were in the habit of grazing on land belonging to Captain Grogan, who received tall in lieu thereof at the rate of 1 per cent. per annum. There were 30 herds on Lord Delamere's land, containing 3,000 head of cattle, which were allowed this privilege without payment. The remaining 7,000 or 8,000 cattle were for the most part in the Native Reserve.

Numbers of the Uasin Gishu Masai.

CAB* 231 [62] [651]

The two reserves occupied by the Uasin Gishu Masai in February, 1911, were separated by a strip of alienated land, and steps were taken to re-acquire parts of adjacent farms belonging to Captain Grogan which would join these two areas and form one native reserve having an area of some 40,000 acres. The Masai were informed that, when the reserve had been allotted to them, they must regard the question of boundaries as definitely settled. They were also given to understand that, in lieu of hut tax, they would be required to pay a cattle tax of R. 1 per head or a stock tax of one head out of every head of 100 cattle, sheep or goats.

Further extension of the reserve.

CAB* 311

In July, 1911, the Provincial Commissioner, Nairobi, reported that disorders had occurred between Chief Lenkoro and the hereditary Laikon, Waiboroh, leading even in the Masai Reserve. Lenkoro had been constituted Chief by Mr. (now Sir Frederick) Jackson when he was stationed at Eldoret and had acquired a considerable following. Charges of witchcraft had been brought against Waiboroh, with the result that he requested permission to move, with the other Masai, from Lelkipia into the Southern Masai Reserve. His following expressed a desire to accompany him. It seemed, however, that such a movement would be the cause of friction between the Uasin Gishu and the other Masai, who have little in common, and it was decided to hold the matter over, at any rate until the Masai Move was an accomplished fact.

Disturbances between Chief Waiboroh and Chief Lenkoro.

CAB* 538 954 791

In May, 1912, the sanction of the Secretary of State was requested to an exchange of land held by Captain Grogan in the Kaiwaiko Province for an area on the Adii Plains. Captain Grogan was willing to exchange 14,000 acres, to be used for an extension of the Uasin Gishu Masai Reserve, for 30,000 acres on the Adii Plains. The Secretary of State approved this arrangement in June, 1912, and the Provincial Commissioner, Kaiwaiko, was instructed to take steps to mark out the extended Uasin Gishu Masai Reserve.

CAB*

A description of the Uasin Gishu Masai Native Reserve was accordingly drawn up, and read as follows:—

Uasin Gishu Masai Reserve: boundaries.

CAB* 131

"The reserve is divided into three parts:

"No. 1. Commencing at the point where the Nakuru Eldoret Service Road crosses the Emsowen (or Yemsowi) River the boundary follows the right bank of this river down stream to the junction with the Emgeri (or Emgeri) River; thence along the left bank of the Emgeri River up stream to the point where it is crossed by the Nakuru Eldoret Service Road; thence along this road in the direction of Eldoret Station to the point of commencement.

"No. 2. Commencing at the point where the Emgeri River is crossed by the Nakuru Eldoret Service Road the boundary follows that road in the direction of Nakuru to the west southerly corner of portion L.O. 407; thence in south-westerly direction along the western boundary of L.O. 407 to the intersection with the northern boundary to L.O. 408; thence westerly and westerly along the northern and northern boundaries of portion L.O. 408 to the Emgeri River; thence along the right bank of the Emgeri River down stream to the point of commencement.

"No. 3. Commencing at the west westerly corner of portion L.O. No. 408 on the Nakuru Service Road the boundary follows the western boundaries of L.O. 408, 409, 410, 411 in a north-westerly direction to the west southerly corner of the latter (which is also the western corner of L.O. 412); thence in a south-westerly direction along the southern boundary of L.O. 412 to the Kalo River;

FL12 Masai FL12

is that they receive no benefit from the cattle of their neighbours. "We get neither meat nor milk," they say; "why, therefore, should we fight for the preservation of your cattle?" With a consummate knowledge of the region, the Masai warriors threaded their way by special pathways, passing Taveta, and crossing the Nyika. Nearing the coast, they stowed themselves away in the bush, while a few of the bravest went forward to spy out the land, knowing, however, full well that the very sight of one of their number was quite sufficient to stampede a hundred Wa-nyika or Wa-digo. Sadi, indeed, told me that on one occasion he actually met some of those spies *in the town of Mombasa at* midnight. This is, I think, doubtful, but it shows what they are considered capable of; and there can be no doubt as to the astonishing hardihood of these scouts. Stories are continually heard to that effect, thus rendering the Masai a terror in the land; and it is a fact that they have even reached Bagamoyo, opposite Zanzibar. 726

The raid was, of course, successful, and our savage friends returned in great glee. On reaching their homes, however, matters had to be squared up, and the spoil divided. So many head of the captured cattle were set apart as the portion of the *lybon* Mbaruton, who had directed them so well, and whose medicines had been so potent. Then followed a sanguinary scene over the apportionment of the remainder. There was no attempt at a fair division. The bravest men and bullies of the party, consulting only their own desires, took possession of such cattle as pleased them, and dared the rest to come and seize them. The understood rule was that if any warrior could hold his own in single combat against all comers for three days, the cattle were his. And thus began the real fighting of the expedition, revealing sickening sights of savage ferocity. There were more warriors killed over the division of the spoil than in the original capturing of it. To kill a man in this manner was considered all fair and above board. Blood feuds were unknown, a man not being considered worth avenging who could not hold his own life safe. If, however, a man was murdered treacherously, the criminal had to pay forty-nine bullocks. Our young warrior, as he was only as yet winning his spurs, had to be content with the honour and glory of the raid, and he had the modesty not to pit himself against older and more ferocious fighters. It must be remembered that the cattle thus captured did not remain 727 [741] 727 728 [742] 727 [721]

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

634 [608] was further complicated by the fact that at stated intervals, normally about 15 years, power passed from the hands of the representatives of one Age-Group in each Section into those of the succeeding Age Group, there being thus no alternation of authority in each Section between the Right Hand and Left Hand Groups.

642 To quote Sir Charles Eliot again, the consequence of the traditional structure of Masai society was that " the centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship. The chiefs arranged the details of any raids which [608] the young men wished to undertake, but their power of compelling them to do anything which they did not wish was very slight." The nearest approach 691 to a central and superior authority was to be found in the Chief Medicine-Man 642 (Laibon), though his authority was based mainly on the discharge of his magical functions.[1] The medicine-men were divided into three grades, of which the first grade was represented by the person of the Laibon, the Chief Medicine-Man of the tribe, and his guidance was held to be of the first importance in any major operation which the tribe might undertake.

THE INTRODUCTION OF THE NATIVE AUTHORITY SYSTEM

195 648 It is unnecessary to dwell here on the circumstances which for a prolonged period made the Masai a standing menace to the peace of their neighbours. The tribe seems to have reached the height of its power between 1800 and 1850, when it overran Kenya and part of Tanganyika.[2] There were subsequently severe internal dissensions among the Masai, which resulted in two of their five " divisions " being practically destroyed and there was also great mortality as a result of the outbreak of rinderpest and smallpox in the 'eighties of last century. But even though their strength was much reduced, their predatory habits continued to be a matter of grave concern in the early days of the Colony, and seemed in particular to threaten the progress of European settlement. Among the Masai themselves strong feelings were aroused by the measures, taken largely in the interest of European settlers, designed to counteract the propensity of the tribesmen to roam widely in search of fresh grazing grounds, as the result of which they were restricted to a Northern Reserve (Laikipia) and a Southern Reserve, separated from the Northern Reserve by a broad belt of country occupied by European farms. That was the position at the time of the Masai Agreement of 1904, but it subsequently became the policy of the Kenya Government to move the tribesmen in the Northern Reserve into the Southern Reserve, which was to be largely augmented in area for this purpose.[3]

195 648 ●991 In view of the terms of the Agreement of 1904, the assent of the Masai was required for this transfer, and the operation was one of obvious difficulty. In the circumstances it was not unnatural that the Government should have availed itself of the influence exercised by the Chief Medicine-Man, the Laibon Lenana. He had inherited from his father, Mbatian, who died in 1890, a position which commanded general respect, and he himself took a leading position on behalf of the tribe in the discussions which led up to the Agreement of 1904, which he signed as " Chief Laibon." He was subsequently recognized

---

[1] The word laibon appears to be a Europeanized form of the Masai word Ol-aibon (A. C. Hollis, The Masai, 1905, page 28).

[3] The Laikipia Reserve, comprised 4,500 square miles. An addition of 6,500 square miles was to be made to the Southern Reserve.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

by the Government as the Paramount Chief of the Masai, a title which was in 1911 continued to his son Sogi. It was as Paramount Chief that Sogi, through his Regent Legalishon, signed the Agreement of 1911, which recorded the acceptance by the Masai of the move from Laikipia to the Southern Reserve.

But Lenana himself never seems to have claimed a position of sovereignty, nor was it ever accorded to him by the tribe. Sogi proved to be lacking in the qualities of his father, and such influence as he possessed was confined to the small Section of which he was a member, while the more important Sections, such as the Purko, either refused to recognize him or treated him with contempt. In 1918, therefore, the Government withdrew his recognition as Paramount Chief. Apart, however, from any question of the personal capacity of Sogi, it is obvious that the social structure of the Masai had no place for the conception of chieftainship in the form existing in the traditional organization of those Bantu tribes which have a "centralized" system of Government. In the latter, the fundamental principle is the recognition of a tribal head, with authority devolved on territorial subchiefs, and supported on the allegiance of headmen representing either kinship groups or village units. In such an organization the authority possessed by the headmen is as essential an element as that of the Chief and his subchiefs—a fact which is sometimes overlooked by those whose contact with a tribe is primarily through these more conspicuous figures. All these features of the normal Bantu tribal organization were wanting in the structure of Masai society.

Following the abolition of the post of Paramount Chief in 1918, the Government endeavoured to find agencies for local administration in the promotion of three institutions, a Central Masai Council, a series of 14 Native Councils each representing a different tribal Section, and Headmen, created as far as possible on the model of the Location Headmen found elsewhere in the Colony. The Central Masai Council at Ngong was composed of the presidents of the Native Councils and was to meet twice a year. The 14 Native Councils were designed to take the place of the informal Councils of Elders to which reference has previously been made. They were recognized as tribunals exercising powers under the Native Tribunal Rules of 1913, and were moreover given the position occupied by Collective Headmen under the Native Authority Ordinance then in force (No. 20 of 1912). The members of these Councils consisted of the recognized Counsellors (L'ingwenak) of the different Age Grades in the divisions, with a few of the more influential Elders and Morans added. Morans L'ingwenak were not ordinarily admitted to these Councils of Elders, but as the Elders did not themselves possess any great measure of control over the Morans, it was thought that the appointment of their leading warriors might help to improve the situation. These appointments could, however, only be temporary, owing to the custom already mentioned, under which an Age Grade of Morans held its position only for a specified period in each Section, giving place to a new Age Grade at the end of that time. The presidents of these Councils were chosen from the L'ingwenak by the Masai themselves.

The greatest difficulty was, as happens at the time, encountered in regard to the appointment of Headmen. These were not necessarily Elders, but were chosen as possessing wealth or influence, and were given the position accorded to headmen by the Native Authority Ordinance no of 1912. But there were two obstacles to their effective discharge of these powers. The units which they were selected to control were not Locations with a settled population, as in most other parts of Kenya, but groups of semi-nomadic villagers, and their

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

grades, which has resulted in marking off the whole of the younger men, roughly up to the age of twenty-seven or thirty, as a warrior class (morans) who are not only free from most obligations to work, but are independent in many other respects of tribal discipline. Though therefore authority has vested nominally with the Elders (laigwanak) who have passed the stage of morans, and with the Councils of Elders who formed a regular feature of the Masai tribal usage, these Councils have not in the past nor are they to-day able to enforce decisions which may affect the younger men. It is true that the Elders have recently made decisions, accepted by the morans themselves, which will limit the period of moran-hood and may provide the morans with work on betterment schemes, but it still remains to be seen how far these will be effective in providing a solution for a problem of which the economic is no less serious than the social aspect.

Attempts were at one time made in Tanganyika, as also in Kenya, to utilize the Laibon, the spiritual head of the Tanganyika Masai, as Native Authority. But the Masai themselves objected to his occupying this position, and as the result of a Sociological Survey made by H. A. Fosbrooke in 1948, the system was altered. The gazetted Native Authority then became the Masai Council, which in practice consisted of Headmen and Elders, and apparently also of any tribesmen outside the moran age grade who cared to attend. But this Council was in effect only a consultative body, without any practical authority, and since the Headmen were not gazetted as Native Authorities, they had no legal power to issue Orders under Section 8 of the Native Authority Ordinance.

A further reorganization has now been carried out. Each area now has its own Local Council, with locally elected representatives of age grades and clans, and these Councils have been gazetted as Subordinate Native Authorities. Representatives from each Local Council, differing in numbers in accordance with the size and population of the area involved, compose the Masai Council, which is the Superior Native Authority for the whole Masai District, excluding Sonjo. The Council is now limited to these representatives: there is, however, provision for the addition of morans or nominated members if and when advisable. The Local Councils have begun to exercise their Order making powers under Section 8 of the Native Authority Ordinance. There are 41 paid Headmen, chosen by members of their own age grade.

There is a Masai Native Treasury, which however is managed entirely by the District Commissioner. The small Sonjo tribe has a Council of Sonjo Headmen, which is gazetted as a Native Authority, and has a separate Treasury.

THE WORKING OF THE NATIVE AUTHORITY SYSTEM

The variety of conditions is so great that it is difficult to generalize on the operation of the system of native administration in the Province as a whole. There are, however, certain points of special significance. The recent re-organization in the Chagga Native Authority area has placed in a superior position those Chiefs who already had a high status in view of the number of taxpayers in their jurisdiction, but its future success will depend on the extent to which these Chiefs can secure the co-operation of the more progressive elements who have now been brought within the framework of the system, as members of the new Divisional Councils. This is especially necessary, in view of the character of Chagga society, for though the Chagga are probably the

shows reluctance, as he may—for many shun election to the office—he is seized by the boys and held until he agrees. Other boys set off to relate the news to his family. When the family has been informed the new *oiparanai* is presented with his badge of office called *el kowa ewah*—the black club. This club is made of olive wood. It must be quite straight and unlikely to break easily. It need not necessarily be black in colour. The club is blessed by the *il-piron* elders who spit honey wine over it; it is then blessed by the *ingopior* boys in similar fashion and handed to the *I'oiparanai*. He too is spat upon in blessing and prayers are offered that he may have strength, wisdom, and long life. Later the boys present their *I'oiparanai* with a heifer and a goat. 561 624 [712] [713]

If at any time the boys go against his wishes, the *I'oiparanai* may resign by throwing his club to the ground before a meeting of the boys. Should they be dissatisfied with him they may make him resign by taking away his club. They may even take away the heifer if his offence is severe. [637]

When the boys have elected their *I'oiparanai* the *il-piron* elders take him, together with a few boys to visit the medicine man. The medicine man always accepts the spokesman presented to him, and prepares for him a special medicine called *el ongwiwpakia*—the red bull. This the spokesman is made to drink; it is said to preserve him from witchcraft of the medicine men. In addition, the spokesman is given various charms for the benefit of the tribe. Possibly one is to prevent rinderpest in cattle, another to cause the cows to calve freely, another to prevent malaria. Usually the charms are sewn in leather bags and are always accompanied by very intimate instructions as to their use. All these charms must be paid for by those who expect to benefit. An instance was related to me of a ceremony held at Loitokitok in 1928 for which a famous medicine man Sendeyo supplied the charm. Its purpose was to prevent the old men of the tribe from dying until they reached a great age. Sendeyo received 40 heifers and bullocks in payment. The medicine man does not state his price but it is usual to pay generously for his services as he is a dangerous person to offend. 561 624 789 791

Obtaining charms from a medicine man is not a matter to be undertaken lightly. Those who accompany the spokesman are always people of proved intelligence and good memory. Charms are always given with much complicated directions as to their use. If any one of the instructions are overlooked the charm may be rendered useless or may even work evil against its users. The Masai sometimes find that their purchases do not have the effect they desire and report the matter to the medicine man; the latter never fails to point out where an error in the method of its use occurred—and probably effects 789 791

789 another sale! Sometimes circumstances prevent the immediate use
● 791 of medicines obtained: a drought for instance might make it impossible to collect people for the ceremony; in such a case the charm might get old and lose its efficiency; or perhaps the object of its use may be forgotten. If this happens the medicine is conveniently mislaid or is thrown away, but if so a report must be made to the medicine man, for he will have seen what happened to his medicine and will be angry, if its fate is concealed from him.

561 After some years the boys are circumcised, and become novice
warriors. As soon as most of them are circumcised the *ingopior* plan
[361] to form into separate companies in readiness for residence in warrior villages called *enawgab*. Messages are sent and the warriors of all ages are called together by means of an *ol-ewal* just as the boys did before the *endengere* ceremony. The number of companies, called *l'aint*, to be formed, also the names to be given to them are decided on beforehand by the *ingopiri* warriors. After discussion a division is decided upon. One warrior representing each company to be formed leaves the assembly, goes a little way and striking the butt of his
[361] spear with his club to attract attention, he calls: "*Ee ale Il Molale*" or "*Ee ale Il Tatiani*"—"This way the Molale, this way the Tatiani." The warriors then rise and join the man calling the name of the company they wish to join.

Groups of five will go together, to join the same company. A company may include warriors of more than one class though as a rule the majority are of the same class.

If the warriors of one class are too few to form a separate unit they join the unit of another class. If the class is a very big one, the warriors may form two or even more units. Having joined a unit a
[591] warrior may retract at any time before that unit forms the first warrior
[621] village. Once the warrior villages are formed, any warrior who leaves one wing to join another, incurs the bitter resentment of the others. In some cases a fine of cattle is inflicted.

The units once formed, the warriors now approach the *ilgiron* elders with a view to holding the ceremony of drilling—without which the first warrior village or manyata of new age-group may not be created.

The *enthangari* ceremony or the breaking of the fire stick, though it effectively holds up the circumcising ceremonies, is not finally binding. It sometimes happens that the medicine man decides that a left-hand circumcision shall be held, in which case all the boys, the *Il piron* planned to make their special men, will be lost to them, for the boys will be circumcised to form one age with the ——— or right-hand circumcision moran.

Kisonko

SECTION II. THE LAIBON.

NOTE.—*Numbers following names refer to Genealogical Chart.*

123
791

The aim of this section is to record the functions of the laibon, or Masai Medicine Man, and the Masai attitude to him and his work, to study the character of recent laibonuk, and the adaptations they have made under modern conditions, and from an analysis of these factors to consider what place the laibon should take in tribal government. One is apt to lose the main thread of such a thesis in a mass of detail, and for this reason many incidents will be omitted when they only confirm what has already been illustrated by example. Facts which are known to run counter to the general argument are, however, recorded.

A. History — recent origins — development — the three types of Medicine man — rules of succession.

123
791

The Masai legend of the origin of the laibon is recorded by Hollis. Sirikty, a youth, ol-le-Mwatya by name, was found sitting on the top of Ngong Mountain, was adopted by the Loiser clan, and proved himself to be a great medicine man. This occurred about ten generations ago. The only difference between this legend and the one generally current in Kisonko is that Kisonko (3), shown as the son of the original laibon in the Hollis genealogy, is regarded by most elders as the first laibon.

One interesting fact arises from the legend, namely that the Masai had penetrated as far as Ngong before they adopted a laibon, thus their original move and occupation of the Kenya Highlands must have been made without the supernatural guidance which the laibon alone can provide. On evidence which need not be recorded here, it seems certain that the Masai, whose age grade custom so closely approaches that of the Galla, were possessed of their present military organization prior to leaving their original home. Thus it appears that the laibon is a later adaptation imposed on a self-sufficient organization of government through age grades. Probably much of the confusion of function which exists to-day, the indefinite division of governmental authority between the laibon and the ageset leaders, is due to the adoption of an institution incompatible with the original culture. It would be wrong to regard the institution as being foreign to Masai nature, but it is probably true that it is a feature which had not found its true level in the tribal structure when European influence intervened.

123
791

791

Assuming that the institution is but recently acquired, its development can be deduced from similar occurrences to-day. For there are, generally speaking, three types of laibon to be found at present. First, there is the private practitioner who, for suitable remuneration, will perform such services as curing sickness, removing barrenness and restoring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a commandment to be utilized to the advantage of the whole group. Such practices are alleged to be efficacious for the above-mentioned complaints, and may also prove useful in preventing

9:Foxbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonial affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes, and is the sense in which the word is used throughout this paper, unless otherwise indicated.

It is very possible that the office of laibon developed by progression through the three stages outlined above. It may further be assumed that the process took two or three generations to complete, before the laibon was fully installed in a position of power. For this reason the immediately pre-European conception of the office was not as old as the genealogy would at first indicate.

It is possible to quote examples of practising laibonok, representing each of the three types of medicine man. Any member of the Engidong clan is credited with a certain amount of supernatural power. Not all exercise their gifts, but as an example of one who did, Kakenya, murdered at Longido in 1938, may be quoted. In addition to the Engidong clan, however, numerous aloma, particularly Kikuyu, often build up reputations as private practitioners.

Of the second type, those who cater for various groups, the example of Gramu (II) springs to mind. He probably exercised 'group' functions in the supply of charms for cattle raiding, but was brought to book when he tried to usurp the privileges of the elders in the matters of tribal ceremonial. Tokio (II) was doubtless another member of this class, supplying raiding medicine to the morans of the Longido area. Both these people are of the Engidong clan, but as an example of one who is not, one can quote ole Shange, of the Ngorongoro Highland area. He is a Kikuyu and his activities are not fully understood. He was believed responsible for a series of raids in 1933, and has still got a reputation, known beyond the bounds of his particular area, as a powerful laibon.

The third type, the acknowledged laibon of the tribe or group of sections, must always be a member of the Engidong clan. One frequently hears that in olden times all the Masai acknowledged one laibon, but Mbatian (I) had a fellow practitioner, if not a rival, in his brother Mako (II), and it is more than probable that many other figures, important competitors to the known holders of office, have been lost in the mists of antiquity. The phrase "all Masai acknowledged one laibon" requires also a further qualification, as the rival sub-tribes, Uasingishu, Kwavi, etc., had their own medicine men.

The office is hereditary, insofar as the holders must be members of the Engidong clan, and probably close relatives of the deceased laibon. More distant relatives confine themselves to activities of the two inferior laibon types. There are, however, no definite rules of succession, the

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Maasi FL12
Kisonko

choice resting on the general consent of the tribe. He whom the previous laibon had held in greatest esteem, and trained and nominated for the office, would normally be chosen. The past reputation of the candidate would, however, be a matter for consideration; if someone, other than the deceased's choice, had proved himself extremely powerful, it is possible that he would be chosen, for fear of the consequences were he overlooked. The maxim of English law, that none should benefit by his crime, is also applied. For the death of a laibon is as a matter of course attributed to witchcraft by a fellow Enguiduong, and the first step in choosing a new laibon is to ascertain who killed the old; such person is automatically barred from succession.

It has been represented that the above theory of late development of the institution stands or falls on a Masai legend. The answer to that is that very few legends are found without some foundation of fact, and secondly that there are many indications that it is a feature not fully assimilated by the Masai organisation.

B. Pre-European Functions of the Laibon: Raids and War — Age-grade ceremonies (with certain restrictions) — local ceremonies — tribute — supposed administrative actions.

Immediately prior to his death in 1890 Mbatian was living at Ngwenga, but had previously lived, as had his father Sidai (I), at Lemaiow Hill, immediately below the Mondul District Office. He was nominally the official laibon for the whole of the tribe, though his brother Mako lived and practised as a laibon at Enguiroto ini Mako, in Ngorongoro Crater. It is also significant that Thomson refers to "the important Lybons (medicine men) Lengoike, Mbaratian, and Lembarwanet," without singling out Mbatian as the leader. If he in fact occupied the position, bordering on chieftainship, that many Masai elders would have us believe, it is improbable that even an early traveller would fail to note and comment on it.

There can be little doubt that at this time a laibon's chief functions were:

i. Dispensing charms for raids.
ii. Supervising and blessing the age grade ceremonies.
iii. Propounding the ritual and giving charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall.

It is probable that any acts which he performed in the executive sphere arose from these three main duties, which must now be examined more fully.

In the matter of providing charms for raids, it should be noted that raids are divided by the Masai into two types, major (ol arom), and minor (ol uwonki). Both these names also signify a group of moran fitted out for war, the former larger than the latter. A third term, which might well be recorded here is o remore, signifying a fight with spears, more particularly the deliberate killing of an alien for the purpose of acquiring a reputation.

9;Foxbrooke G-5 (1936-1948) 1948 FL.12 Masai FL.12
Kisonko

726 Prior to a major raid, but not before a minor expedition, a visit would
791 be paid by the participants to the laibon, who would give charms to ensure success. No payment was made at the time, but a portion of the captured stock was taken to the laibon on return. It was thus to his material advantage, as well as to that of his reputation, that the raid should be successful; it is consequently only natural that he should pass on any bits of intelligence brought in by previous visitors, and any hints which experience had taught him, to reinforce the efficacy of his charms. Thus a proportion of the spoils, lifted by a combined force of Kisongo Dwati and Daroto from the Lumbwa living beyond Kitale, about 1918, were taken to Laibon Parrit (10), later gazetted Chief of the Tanganyika Masai, but at that time resident in Kenya.

721 The initiative of suggesting such raids seems to have rested with
791 the moran, though the modern technique of an upstart laibon saying "There are plenty of cattle in such-and-such an area, I can't understand why you fellows don't go and take some", was doubtless used in the old days to encourage slowly moran to action.

Minor raids, from all accounts, were organized locally and carried out without reference to the laibon, to whom some of the captured cattle were presented. The difference between a major and a minor raid appears to have lain not only in the numbers of Masai involved, but also in the strength and reputation of the proposed enemy.

669 In the matter of civil war the laibon's position was rather different,
791 as his own position was at stake. In contrast to the usual "We went and raided such-and-such a tribe", Laimer informants frequently refer to the time "when Mbatian called us up to fight the Lukipsiak." In the struggle which followed the death of Mbatian, it is obvious that Lenana and Sendeya were encouraging war for the purpose of furthering their own personal ambitions.

561 The second main function of the laibon is that of supervising and
791 blessing the age grade ceremonies. It is probable that a laibon at least gives charms, if he does not attend in person the Enkolomi ceremony, the commencing ceremony of the age, held by the Kaloenyoike section on behalf of the whole tribe. It is certain that he does so both at the Uunto and Ngabori ceremonies, that is at the promotion and passing out of the warriors. But he is not responsible for the organization of such ceremonies, nor is it on his initiative that new ages commence or old ones stand down. As this is a matter of prime importance in determining his true position it deserves full attention. The closing of the present Moriaba age was agreed to at an Ol Kiama (or General Meeting) of the tribe in 1937, and not done at the dictation of the laibon. The il Piron elders, i.e. those of the recipromating age — set next but one above the warriors — are alone responsible for the initiation, promotion and standing down of the moran. An interesting case occurred in February 1938, after the Endungoro, or closing, of the present age, when a Dwati elder at Naibor Mori decided to circumcise his two sons, and brewed beer in preparation for the event. The local Daroto, hearing of this, determined to stop him, marched into his boma, and drank the beer themselves. It

9:Foxbrooke G-S (1936-1948) 1948 FL.12 Masai FL.12
Kisonko

is confirmed by numerous reliable elders, that, even if the laibon had given his sanction for the circumcision, the Dorobo elders would have been justified in acting as they did.

On a safari in June, 1938, laibon Mbatya laid down a ceremonial for closing the age. It consisted of taking a small bird (dead) and breaking its legs and putting out its eyes. Whitehouse records a similar ritual in the same connection. On further enquiry it appears that this procedure is merely a curse which may be laid on any elder who is determined to countenance his son during the 'closed season' in defiance of warnings. It is generally considered improbable that such a ceremony will actually be performed. The point of recording this case is to illustrate that the laibon's part in this matter is merely to re-inforce by magical means a decision that had already been taken by the elders. It is also of interest to note that Mbatya was passing off as original a curse which had been used in Kenya for years.

Although the supervision of the age grade ceremonies has been recorded as an important function of the laibon, this activity is subject to curious restrictions, the principle of which I have been unable to ascertain. The facts, however, show that the laibon of one section may perform the ceremony for another, or alternatively the assistance of an 'unofficial' laibon may be sought; for instance the Ilgalwan or passing out ceremony of the Dorobo age-set of the Kisongo section was nominally held under Parit, and the Uasin or promotion ceremony of the Kisale age under Mbatya, who were respectively the ruling Laibons at the material times. But in fact an old Kikuyu adopee of the Ilgalwan clan, one Lolkidewa ole Kadongo (now deceased), was called in to assist in both these ceremonies. By agreement the Mondol laibon received the fees in respect of these ceremonies from the Kaberera and Kilaya areas, whilst those contributed by the Mondol and Longida Masai went to Lolkidewa at Bail, Kenya Colony. In another case, Sangayan, laibon of the Loita section, performed the Uasin or promotion of the Kisale age for the Matapato and Lodokilani sections, which are nominally under Kimoroni (ib). All that can be said, therefore, in our present state of knowledge, is that the 'official' laibon to the section does not necessarily play the leading part in the age grade ceremonies of that section.

In the choice of Laigwanak or Spokesmen of the Age-grades, Whitehouse records "The medicine man always accepts the spokesman presented to him," a statement for which there is ample confirmation throughout Kisongo. Hollis, it is true, states "If the chief medicine man approves of the selection, a cloth is made for the new chief . . . ", but this is with reference to the laiyeni who is a chief of ceremonies only, and certainly does not apply to the Laigwanak or Spokesmen.

It is also noteworthy that the 5 Piron elders keep in very close touch with the laibon, from the time they take charge of the new age, until their charge stand down. Most of the Laigwanak of the Kisale or Senior Warriors' Age of today state that they were first taken to Laibon Parit when he was still resident in Kenya, i.e. prior to 1933: they were of course only boys at the time. The laigwanan of Loangopon for instance

state that he went eleven times to Parit before circumcision, numerous times after initiation, when Parit was resident at Mondul, and six times to Iaiboni Mbaiya. One cannot regard the figures as accurate, but at least they show that the laibon is in close touch with the developing moran and their guardians.

It has been recorded above that the third main function of a laibon is to lay down the ritual and to provide charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall.

Whitehouse's description of visits to the laibon for this purpose is of interest. "Obtaining charms from a medicine man is not a matter to be undertaken lightly. Those who accompany the spokesman are always people of proved intelligence and good memory. Charms are always given with much complicated directions as to their use. If any one of the ceremonies are overlooked the charm may be rendered useless or may even work evil against its users. The Masai sometimes find that their purchases do not have the effect they desire and report the matter to the medicine man, the latter never fails to point out where an error in the method of its use occurred — and probably effects another sale! Sometimes circumstances prevent the immediate use of medicines obtained, a drought for instance may make it impossible to collect people for the ceremony, or perhaps the objects of its use may be forgotten. If this happens the medicine is conveniently mislaid or is thrown away, but if an a report must be made to the medicine man, for he will have seen what has happened to his medicine and will be angry if its fate is concealed from him."

Most of these points are confirmed by Kisongo informants. The organization of deputations to the laibon is one of the principal duties of the lagwanak. I have heard it explained of various elders — "he always goes on Ismail so he has a good memory." The "complicated directions" usually involve the building of a boma, to which all the participants temporarily remove, the duration of their stay is laid down by the laibon. The charms given may be applied in numerous ways; they may be eaten or drunk, sprinkled or smeared over the bodies of those concerned. They may be mixed with decoctions of tree roots, with the fat of the sacrificial beast, or even with the liquor semen if the slaughtered beast is pregnant.

The slaughtering of a beast is the most usual ceremonial, its species, sex, colour and condition being laid down by the laibon. Examples of such types are — black bullock, black and white heifer in-calf, brown cow, pregnant ewe, etc., etc. The skin of the beast is usually cut up and divided amongst the participants. Such pieces of skin are termed *il kewata*, sing. *el kewata* and may be worn on the finger, (a particular finger being named by the laibon) hung round the neck, or suspended over the door or bed in the house.

Other variants concern the situation of the boma, or the place of the moran, or slaughter there are an infinite variety of ceremonies which may be ordered.

9:Fuchsenka G-5 (1936-1948) 1948 FL12 Maasi FL12
Kiwenka

One is frequently told by elders that in the old days the laibon concerned himself primarily with the morans, giving them war charms, supervising their circumcision, etc., his payment consisting of a share in the spoils of war. After the Uiuto or promotion ceremony it appears that a special raid was undertaken, called *enonkoriani*, a portion of the produce of this doubtless being handed to the laibon. I should think, however, that the custom of collecting cattle by general levy on the Age, at some time after the ugalenge or 'passing-out' ceremony, is old established. When such cattle are presented to the laibon, it appears customary for him to decree a ceremony, and to supply charms for it free of charge. This, according to some elders, was the last official connection between the laibon and the age *as a whole*, except of course his natural association with the *il piron* elders concerning the initiation of a new age. Other dealings with him by the elders were in the nature of private practice.

Before concluding the reconstruction of a laibon's functions in the old days, reference may be made to certain administrative actions alleged to have been taken by certain past Laibonik. For instance Sulei (I) is alleged to have recalled a section of the Masai who had penetrated far into Congo country (see Sec. I), and when they refused to obey him, sent a body of morans to compel them to return. Again he is credited with transplanting some families of an agricultural tribe, il Kikuia, from Arusha Chini to the slopes of Mount Meru, to grow his tobacco, and to dig water furrows, notably the Engare el Mutanyi and the Engare Narrobi, these agriculturists subsequently developed into the Arusha tribe. Mbatian (II), apart from his civil war activities, took such 'administrative action' as telling the Masai not to move at the time of the famine — in fact imposing a quarantine — and ordering the tribe not to resist the Europeans.

But it frequently happens that past events become linked with the names of important personages of the time, when in fact there was no connection between the two. This may have occurred at least in the case of these actions recorded above attributed to Sulei. But even if this is not so, the few instances of executive acts undertaken by the laibon in the past are insufficient evidence on which to base any theory that the institution of the laibon at any time approached the status of chieftainship amongst the Masai.

The picture of a pre-European laibon may therefore be re-constructed as follows:—

He was primarily the medicine man of the morans, both in respect of war charms and of supervising and blessing their circumcision ceremonies. As junior elders, the Masai still maintained contact with the laibon (paying ugalenge fees) and as *il piron* elders visited him on behalf of the new age. But except as private patients the elders seem to have done less business with the laibon than they do to-day. Administrative, executive or judicial functions were not part of a laibon's duties, though he could exert a certain amount of control by judicious advice. He was in no sense a paramount chief.

C. Modern adaptation of the Lalbonsie — increase in local ceremonies — payment of fees — right to demand girls — mixed-blood contents attitude of Maori to Lalbon and spiritual matters in general — conclusion.

The basic factor altering the position of the lalbon is the enforced prohibition of cattle raiding. As pointed out above, the supply of charms for cattle raiding was one of the Lalbon's chief functions. The first effect of this change was to reduce the lalbon's status, in addition to cutting off his main source of income. Some continued to draw glory and dividends by continuing the practice in secret, others, more loyal to the new order, sought for something to replace this loss. It is difficult to assess which motive was uppermost, love of power or greed for cattle, but whichever it was, the reaction was the same. It consisted of an intensification of another of their main functions, viz. providing charms for, and prescribing the ritual for, local ceremonies. This is thought to have been less important in the old days, but it is now the lalbon's chief function and principal source of income, and as such merits attention.

The nature of the ceremonies has already been briefly described and with regard to their frequency, it is impossible that a year passes without some ceremony or other taking place in every area of the district. An aspect not yet touched upon is that of the method of collecting the fees paid to the Lalbon.

In respect of the cattle paid for the age grade ceremonies their number seems to be laid down either by custom, or by the lalbon himself, (I am not sure which). They are collected by general agreement from the members of the age concerned, after long discussion. A point of interest is that members of the Ngaiteng clan are not expected to contribute, but may add a 'present' of their own, e.g. in one instance encountered, in the proportion of 5 Ngaiteng cattle to 45 from other clans. But what is very striking about these levies is that the Maori in general are seldom sure for what they are paying. When enquiring about a known mob of cattle, one may be told that they are the fees being paid by the Dwati age in respect of their Ngahere ceremony, or by others that they represent payment by the Dwatu age in respect of their Uwatu, or pre-mution. One can only conclude that the general public do not really know for what they are paying; they have been told to contribute cattle, and do so without further enquiry.

In the matter of local ceremonies the situation is different. The idea of holding such a ceremony frequently arises from an old man having a run of bad luck — his cattle or children dying, if his wives not giving birth. He calls a number of his neighbours together, they discuss the situation and decide that a visit to the lalbon is indicated — thus the ceremony starts. Other local ceremonies may be sought when the area in general is affected by drought or disease, or again the lalbon himself may remind an area that he has not heard from them for some time. This may be done, for example, in the following manner: when the lalbon is discussing the house or is in a trance deciding some matter for a Nalaroiwa deputation, he will suddenly switch round and say, "I see the Maiko people

are in for a bad time." That is sufficient to ensure that a deputation from Matho will visit him without delay.

Apart from specific payments for age grade matters, and the ceremonies obtained thereby, all the elders of an area are supposed to benefit from the performance of these local ceremonies, and consequently are expected to pay. It is an accepted practice that the Oldalo age should not give cattle to be taken to the laibon, but are expected to provide hospitality for the meeting which is called to decide who shall contribute. At the meeting proceedings may begin by a man being denounced for refusing hospitality to an age-mate, and so in effect fined. Otherwise the matter is one for general discussion, X pointing out that he gave a heifer last time, Y drawing attention to the fact that Z has not helped for many years, and so on.

These details have been included under the heading "Modern Adaptations," since one is so frequently assured that in the old days no such levies were made. It is asserted that the only occasions on which loms to loms levies were made was when a party of moran returned from a raid empty-handed, and were so ashamed that they collected beasts from amongst themselves to take to the laibon.

Another demand which a laibon makes on his followers is that he should be provided with wives. Some elders say that this is an age-old institution, others that it is a recent innovation. By this as it may, motor transport is an innovation, and by getting round the country more, the laibon sees a greater number of suitable women, and consequently increases his demands. Parit (II) is credited with collecting five girls as a result of his safari to west round South Mamaland when the boundary was demarcated: the Dwat paid the dowry and arranged the weddings. Wanya (II), on a safari to Kikuyu in 1937, demanded and was given the daughter of Lemoona, although she was engaged to another. Kapu'we (II) paid one heifer towards the dowry and contributed the cowskins for the wedding garment. When the girl was brought to Mondiri a number of relatives were presented to form the nucleus of her herd. On the same trip, Wanya demanded and was given one girl from Ilmanjiro and another from Longonot. Talka (II) is also alleged to have tried his hand at the same game, demanding the daughter of an old man at Sanya, the father asserted that it was just an ordinary marriage, but local Masai opinion thought otherwise. For when a girl is married to a laibon, she is regarded as lost to her family and clan. The usual relationship which marriage sets up between in-laws does not exist, one cannot approach a laibon for assistance as one can an ordinary son-in-law, nor can one expect a laibon to let either one's daughter or her children go home on protracted visits.

The introduction of Pax Britannica and of motor transport makes contact between the Masai medicine men and also with doctors much more possible. There always seems to have been a close association between the Kikuyu and the Enguiboni clan, so much so that we may reasonably suspect that the benevolent child sidelineation was mostly a Kikuyu importer. But if, as we gathered, the Masai and Kikuyu were

frequently fighting, contact must have been limited. But that is not the case today. When Mbatya's home was infected with measles in 1932 he hired a lorry and himself travelled to Ikindo and beyond, bringing back a Kikuyu medicine man to cleanse his home for him. Kisaka (B) is reported to have obtained a charm to kill Mbatya from a Sukuma witch doctor in Pare, and Lutinga (B) and Sulani (B) hired a car to go and interview this doctor, in order to verify the rumour and/or to obtain charms stronger than those given to Kisaka.

The cult of the lukeo must therefore have much in common with the beliefs and practices of neighbouring tribes, and I put it forward as a possibility that, with further contacts, the institution may eventually end up merely as an instrument of common witchcraft.

In the absence of rational scientific explanations for the many natural phenomena which surround them, — drought and disease, fertility and sterility, birth and death, — it is natural that the Masai, in common with all other primitive peoples, should regard the unseen with deep fear and awe, and grasp at any opportunity offered which purports to control these mysterious factors in their lives. They believe the lukeo to be capable of controlling these unseen forces; he is the intermediary between themselves and the supernatural. His blessing will ensure prosperity, his charms and rituals can alleviate an existing calamity, and his power of foretelling the future enables steps to be taken to ward off an impending catastrophe.

It is extremely difficult to ascertain the strength of these beliefs amongst individual Masai, but it is considered that the majority of the Kisongo hold them implicitly. Some areas, e.g. Kikuyu, have a reputation for consulting the lukeo more frequently than others, but none the less the beliefs are general. The practice of the ritual may fall into temporary abeyance in certain areas, but the belief remains, and manifests itself in outward form on the advent of a drought or of a personal reminder from the lukeo. Modern contacts have as yet done little to shake these beliefs. A few Christian Masai are completely sceptical, others may have their doubts, but when the occasion arises feel that they had better do what they are told, "to be on the safe side". One of the chief factors which guarantees the maintenance of these beliefs is the age grade system. From early adolescence the future leaders of the tribe, the laigonani and ingidot, are frequently taken to the lukeo by their guardians, the il piron elders. The lengthy discussions beforehand, the actual journey, the reverential attitude of the elders to the lukeo, the ritual, the mysterious voice in the darkness but foretelling the future, all these must make a deep impression on the youths. This in turn is spread to the rest of their age-mates when they return home and perform the ordained ceremony.

There seems little doubt therefore that so long as the age-grade system is maintained in its present form these beliefs, and the ascendant power they give the lukeo, will be perpetuated. True, as education progresses, this power will decrease, but disbelief will dissociate a youth from his age-mates, and consequently his influence on others will be small, as the

9:Footnote G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

561
791
791

other hand those brought up in awe of the laibon are in a position to influence large numbers of their fellows. For this reason it is probable that these beliefs will be held for many years to come, although their intensity and their outward manifestations may decrease, as in fact they appear to be doing in Kenya to-day.

791

The time has now come to summarise this section and to draw our conclusions. In doing so it will be necessary to differentiate between the Masai attitude to the laibon, and the laibon's attitude to the Masai. The Masai do not regard, nor have they ever in the past regarded the laibon as a chief or lawgiver. They regard him as an intermediary between themselves and the unseen, and in consequence hold him in great respect and awe. Any order that he cared to give, suitably disguised as a prophecy, would therefore be obeyed; the laibon is thus a great potential political leader. But here the attitude of the laibon to the Masai comes in. It may be that in the past a laibon has felt responsibility for the welfare of the tribe, but there are very few instances of this taking practical form. At the present time one can only judge the attitude of the laibon to the Masai on facts, and these reveal that he thinks only of himself and not of the tribe. With the possible exception of Lenana, no laibon has made any effort to assist the tribe to adapt themselves to modern conditions. Rather the reverse; for their own personal profit they have made themselves the focus of the tribe's intense conservatism. When cut off from one source of income (a share of raided stock), they have used their powers to develop an alternative (extended sale of charms).

9:Fosbrooke G-5 (1936-1948) 1948 FL.12 Masai FL.12
Kisonko

laigwanan will be chosen for a large area, e.g. Naberera, including Engasumet and Ruvu. But later, as the number of recruits to the age increases, the ingobir of Engasumet and Ruvu will choose laigwanak of their own. These latter will, however, remain in a status of slight inferiority to the laigwanan first appointed. In their own areas they will be virtually independent, but at any communal gathering the senior appointment takes precedence. 561 624

This process of sub-division is important, as it not only gives a key to the really influential people, but also accounts for the fact that the areas of laigwanak vary from age to age. For instance, when the Dwati age was in process of formation, numbers were so few that in the whole of Tanganyika there were only three areas, Molio, Kiteto and Engaruka. In the Dareto age, both the divisions and sub-divisions were more numerous, whilst the number of Kisale candidates justified even more appointments.

The visits to the laiboon of the embryo laigwanak and ingobir appear to form a large part of their training. Even prior to the selection of a laigwanan, the leading youths are taken by the il piron elders, and the lengthy discussions which precede such visits must give the youths good practice in debate. Of these visits Whitehouse writes, "when the boys have elected their l'aiguanani the il piron elders take him, together with a few boys, to visit the medicine man. The medicine man always accepts the spokesman presented to him and prepares for him a special medicine called ol oingoninguakia — the red bull. This the spokesman is made to drink; it is said to preserve him from witchcraft of the medicine man. In addition, the spokesman is given various charms for the benefit of the tribe." It would thus seem, and my informants confirm, that the laiboon has no power of veto over these appointments. [illegible] [illegible]

The official installation of the laigwanan may take place immediately after he is chosen, or it may be delayed. Thus in some cases it occurs before, and in others after, circumcision. An assembly is summoned for the ceremony; the ingobir of the moran and the il piron elders are the chief participants, but others drawn both from these and from the remaining ages are naturally present. A black club is prepared beforehand, which forms the centre of the ceremony. In some accounts a cow with a female calf at hoof is brought in, and its milk smeared on the right arm and on the club of the laigwanan, the divine blessing being invoked, and prayers offered that the new laigwanan may rule his people with strength and justice. Other accounts replace the milk with beer, and state that the milk need not be that of the mother of the calf, which incidentally the laigwanan keeps, but that it must be such-and-such a coloured cow. Again, others say that the club must be bound with green grass. The details are immaterial, but the ritualistic nature of the ceremony indicates that the office is regarded as one of permanency and importance.

The discussions preceding the choosing of a laigwanan never take place in the presence of possible candidates. For frequently they will refuse to undertake the work, and will run away if they know beforehand that they may be chosen. The chosen one may even throw down the

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

428 a small legacy of a few cattle to anyone he likes, but the bulk of his property must be inherited according to the above rules.

429. 430 *Women's Property.*—As a general rule a woman cannot own cattle herself, but holds them in trust for her husband. I have twice come across exceptions to this:—

(a) A woman who had plied the profession of a doctor (i.e. native herbalist) and had received cattle in payment.

(b) A woman who had amassed wealth outside and independently of the tribe.

Household utensils such as gourds, hides, and donkey saddles belong to the woman of the house.

175 *Laibons* (Masai, *'L-Oibonok*).—Hollis, pp. 216-230, gives the history of the 791 *Laibons* up to the beginning of the present century. I will therefore briefly summarise their more recent history.

648 Lenana was made paramount chief of the Masai in Kenya Colony by the Government. He died in 1911. Some people thought that his brother Sendeyo had bewitched him, but little credence need be attached to this opinion. He appointed his small son Seggi to succeed him. As Seggi was a minor, Ngatoya, son of Nellian, first cousin to Lenana, was appointed as regent. Between the years 1912 and 1923 it was the Kenya Government's policy to curtail the powers of the *Laibons*. Seggi grew up a weak and lovable person, who has little authority, and is more often drunk than sober. At one time he was deposed from paramount chieftainship for persistent inebriety, but was subsequently re-appointed to be paramount chief of the Kajiado District only.

His brother, Kimurusi, is *Laibon* of the Purko section. He is a weak character, but vainglorious and boastful. He is very untrustworthy owing to his desire to seem more important than his character warrants him to be.

Ngatoya is now a very old man. He is *Laibon* of the Kakonyiki section. Sendeyo is *Laibon* of the Loita section. He was deported to Meru in 1923, it having been alleged that he was implicated in the rising of the Il Kitoip age-group of the Purko at the end of 1922. He was allowed to return to Loita in 1928 and still lives there, much loved and respected.

Whereas in Kenya the power of the *Laibons* has been much reduced since Lenana's death, and councils of elders have been created to try and take their place in the government of the tribe, in Tanganyika Territory the authority of the *Laibon* has been upheld and he is regarded as the paramount chief. I believe that the system has worked well. Until recently their *Laibon* was Parit, a son of Lenana. Parit is now dead, and a minor, whose name escapes me, has succeeded him.

In Pl. XIII, *Fig.* 6, is seen a photograph of Seggi holding in his hand the bronze club of his grandfather, Mbatian, and the iron club of his father, Lenana (see Hollis, pp. 229 and 230). Mbatian's bronze club is at present in my possession, but should be returned to one of his descendants at some future date.

Functions of Laibons.—A *Laibon* is far more than a mere medicine man or purveyor of charms. His function would seem to approach more closely that of a chief priest of the Iseudiow, and the *Il-Kidongi* sub-clan might be compared to the Levite tribe. 791

He is, or should be, the religious head of the tribe. No ceremony nor important enterprise should be undertaken without his blessing, in return for which he should be given a large present of cattle. He prays to God on behalf of the people. On one occasion Sendeyo arrived in my camp before sunrise, just as I was about to start on an excursion into the deep forest, and made a prayer for our safety. We stood round him and responded "*Ne-ai*" (= "O God") at the pauses; I was too much taken by surprise to remember the details of the prayer except that it was very impressive, and that he ended by giving his genealogy (see Hollis, p. 338) in order to show that the prayer was one which should receive attention.

The *Laibons* use charms (*indilinga*) for various purposes, and their employment is invariably accompanied by prayer to God. I have a few of the charms in my possession and have been instructed in their use, under promise not to reveal my knowledge. Sendeyo once said to me that a good heart was better than charms. [789]

Witchcraft.—Although the *Laibons* use charms, witchcraft, *i.e.* harmful magic, is not indispensable to their office. Some of them, however, are alleged to have made use of it. Witchcraft is not indigenous to the Masai. Such persons as I have found practising black magic in Masai country have learnt it from the Kikuyu of Nyeri District or from the Nandi. 784 [790]

Religion.—The Masai believe in one God whom they call En-Gai, which is the same word as they use for rain. They say that God is one, but permeates everything. He may be prayed to as inhabiting a wood, a stream, the earth, etc., but He is all the same God. The Masai only use short prayers such as "*Ne-ai*" (O God) and "*Ne-ai nikiae*" (O God do not strike me) except for the prayers at *Il Pul* and those of *Laibons* already mentioned. Some, if not all, of the ceremonies have a religious significance, but I cannot give details without further experience. 791 796

Superstitions.—There are certain old trees with holes in them, in which a Masai puts a handful of grass or leaves when he passes. They have told me that this is equivalent to a prayer, "May I live to be old like this tree." 789

A traveller sometimes puts a stone in the fork of the branch of a tree near the track in order that he may arrive at his destination before nightfall.

There are a few places where the passer-by should tie a knot in the grass. I am uncertain of the reason for this.

When the new moon is first seen people pluck grass and throw it towards the moon, saying, "*Injoki e emen el nado naenkie el dawp*"—"Give me the body which is long and I give you the short." I do not know the significance of this.

[P. 466-A]

Political Institutions

Land Division and Authorities

The basic unit of a tribe, *olosho*, is the *olol* or warrior company to be mentioned, for it represents a district from which a given number of fighting men is drawn; and within this district are also the kraals, *enkaji*, of the elders. The formation of an *enkaji* varies. It may contain a group of men who continue as elders the association which they began as warriors in the *manyata*; or it may be a casual grouping which can break up and re-group; and it may contain anything from one to 10 people. Without the *enkaji* a satisfactory council seems to exist with one of the elders as its head; it may be no more than the heads of families sitting together and talking. Such as it is, it corresponds to some extent to the Nandi *kokwet*, though its powers and options are smaller. But it differs also in an important respect. All the inhabitants of a Nandi parish, including the warriors, come under the jurisdiction of the *kokwet*, whereas in the Masai system the local warrior company has its own authority, the *olaiguenani*, who is responsible for the maintenance of both military discipline and "civil law" within his company, and his warriors appear to be independent of the elders' councils. When the age-set has passed out of the warrior stage, the *olaiguenani* ceases to authority. A number of sub-districts form the larger unit, *olosho*, which English writers call the section or division, the latter being the word used by Sandford. Each of these *Loshos* has a council of elders which corresponds in some respects to the Nandi parish council and, as will be seen from p. 11 above, the *Loshos* are associated either in some combination with a group-name, the D.Parkin, D.Dapash, and D.Kwik-a-nyokie, which together form the D.Kisongo, or in distinct "tribes" like the D.Kikipiti, Sambur. The organization of the Sambur seems to have developed on slightly different lines from the rest of the Masai.* The sub-up in the homestead of one elder and his wives and children, a number of such homesteads form a local group with a council of elders, and the total number of local groups is divided among eight sections called *Emoranis* (sing. *olomani*), each with a council made up of the leaders of the component group-councils. These *Emoranis* are divided into two large sections with "cattle-names": the *Iwo-nak-kiten*, "the black cattle," contains the *Emoranis* of Lo-Kipatu-Kiten, Lo-Kipark, Ol-manik, and Nyaparai; and the *Iwo-lan-kiten*, "the white cattle," contains the sections called *Iwo-nak-kiten*, Lo-Kiteni, Lo-Kwenk, and Lo-ipik.

The most important figure in Masai organization is the *olaiguenani*, whose duties in the past were to make the practical arrangements for war, to control the distribution of the loot, to settle disputes when appealed to, to lead his men in war, and to maintain liaison between his company and the Iolkiri on the one hand, and between his company and other companies on the other. But he could resign if displeased with his men, who in turn could dismiss him if not satisfied with his actions. Now that there is no more organized warfare, the duties of the *olaiguenani* are mainly confined to the suppression of raiding, in which his effectiveness depends on his character, influence, and disposition; and to settling disputes, to which he is assisted by the elders of the district. Thus a council system with an elected leader has developed out of the older structure in which the *e-manyata* and sub-up were semi-independent leaders. As among the Nandi, it is the personality of the *olaiguenani* and the force of public opinion that compel obedience to him. But the whole Masai system is less clear-cut than even that of the Nandi, in spite of the apparent definiteness of the *olaiguenani*, though in certain respects he is exclusive to the *Ilm Baks* or age-set rules of the Cells, who is the tribal ruler for a period of eight years.

The Laibon

The laibon, a word anglicized from *ol-aibon*, pl. *il-aibonok*, and derived from *a-ibon*, "to make 'medicine,'" is a ritual expert who practises divination and rain-making, cures illness, provides charms, and foretells the future. Footnotes divide

* Information from the Rev. Charles Hobbesmd of the B.C.M.S.

the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one to each tribal group, these all belonging to the Ia-Kidogi sub-clan of the Il-Kiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputiei or Ngong (now living among the Lotuko), the Kisonko, Il-Ahiyaak, Il-Waata-taka and Sonjoro also had their own; though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were* (1) to sanction war and to provide protective medicine for those taking part in it; (2) to authorize the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical focus for tribal activities. Many laibons also practise witchcraft (as defined above, p. 36). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organization

When the warriors of a *ceit* wanted to raid, they approached their *el-aigwenani*, who planned the attack and arranged for the co-operation of other companies if a big raid (*el-ereng*) was intended. The *el-aigwenani* concerned then went to the laibon to get his sanction and protective war medicine. Before agreeing, however, the laibon consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in very after getting drunk. The warriors then went to their *il-pull* and hunted an eland to prepare them for the raid, patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the coast, the Dyiko being a frequent objective. Thomson was told that a Masai patrol was once sent to Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; they were were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the *manyata*, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-ma-rok-kiteg* and *il-ma-ko-mapi*, "the black ox" and "the red ox," and fought for the spoil. Small raids, *el-ewanga*, carried out locally by one *ceit*, were not admitted to the laibon, who received no share of the spoil.

Wars between Masai tribal groups were frequent, and formed one of the factors in the disintegration of the Kenya Masai at the end of the 19th century. In such wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Elmentaita, where two large collections of warriors (he put the number at about 3,000 on each side) were camped a short distance from each other, one camp being that of the Kaputiei, the other of the Il-Ahiyaak. A detachment of picked men from each side would come out and fight a pitched battle, charged on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Armed with spear, and in the panoply of ostrich-feather head-dress, cape, gleaming spear, shield, sword, club, painted face and leg ornaments, the Masai warrior felt himself more than a match for anyone.

Prisoners were not often taken, though sometimes a man would capture a woman whom he would make his wife, or a child whom he would adopt. Men were killed, women seldom. Peace was made by a formal ceremony at which nursing mothers

* Fadiman, pp. 15-17.

M 614 [786] /18/

The 'i ende and El ndiejie to a certain extent stand in contrast to the El ondgara, whom they half-mockingly, half-absolutely also call 'N dziera-gonah (1)

M [792]

1. 'N dziera, glutton, ee gonah, the mouth: by putting the two words together the idea of the first is supposed to be intensified.

or Sig-adji-nagli-ainl (2).

M [792]

2. , the house of the hard mouth: nagli a hart, ai ainl, the mouth.

and, in contradistinction to them, designate themselves as Sig adji ai mawi. As the reason for this, tradition relates that the El ondgara were once separated for a longer period of time from the other two tribes and, upon reuniting, made a bad impression because they no longer observed the divine commandment forbidding the killing of female animals for consumption. This gave rise to the above nickname, which, freely translated, means "greedy glutton."

M 613 The El hadje and El gwi are not infrequently designated as El simgela, a name formed after that of a war leader, Os ngili. As the reason for the combination, it was said that members of the two subtribes were once notorious cattle thieves.

M 791 • The most outstanding lineage, not only of the 'i ainr tribe, but of the whole bisnal people, is the El gilah, because both the family of the chief (ai ainr) and that of the sorcerer (ai gilah) belong to it. The designation "chief" is actually not quite correct, since the ai ainr does not rule directly and does not exercise any real executive power. He rules only indirectly: the firm belief of his subjects in his prophetdom and in his supernatural ability of sorcery gives him an influence over the destinies of the people. Despotism and cruelty, such as we find among all Negro rulers, are foreign to him. He is less a ruler than a national saint or a patriarch, in whom the Wakanfi and Aná also see their head. The people speak of his saintly person in timid awe, and no one would

M [613] [794]

M [829]

D [791]

/10 cont./

dare to appear unannounced before the mighty one. Thus, the Mawi living on the military station of Mawki /Mawki/ remained hidden during Zandee's presence when the latter visited it at the beginning of 1896, and my Mawi servant did not dare deliver a message either to Zandee or to an attendant sitting beside him.

The aim of the chief's policy is the unity and strengthening of the Mawi. By letting the capacity of the warriors spend itself in expeditions against foreign tribes, he protects his own people from devastating civil wars for which the endless frictions of the districts among themselves would give continuous occasion. This influence makes possible for him the belief that a victory is attainable only through the secret power of the war medicine that he alone knows how to manufacture, and a defeat most inevitably comes if he produces it. Neither he nor his closest relatives go to war. He gives remedies against epidemics and sicknesses -- as a rule in the form /10/ of magic medicines -- and makes sacrificial feasts in honor of the Mawi god Ng ni. He made the prophecies from an oracle game of the kind of the counting off of buttons. From a seer's horn provided with a leather cover (Fig. 1) he takes a handful of river pebbles, puts one or several of them aside, and throws back the rest. After he has repeated this several times, he announces his prophetic verdict, which often enough is worded in Pythian ambiguity. The game, like the lineage, is called ni gbele. The office of ni ndawi is hereditary and has been handed down until the more recent times from father to the eldest son of the principal wife. The badge of his office is an iron club.

Fig. 1.

The Mawi do not know much to say about the genealogical tree of the Ni ndawi. The first four or five names that it contains belong to chiefs who ruled in early times. These names are Kidolei, Gezigu, Bengumbe (Bengumbe), and Lengirdbeki. The next chiefs are historical and descend from modern times. The first of them, Kibelaze, seems to have ruled at the beginning of the nineteenth century: he was followed by his son Simonk, who

/13 cont./

was followed by Sokpi and the latter by Mbaryon. After the latter's death the Masai split up. One part placed itself under Lenana, the eldest son of the principal wife, who was born before the accession of Mbaryon, the other under Zembe, who was the old man's favorite and had named by him to be his successor. The people relate that Lenana thwarted Zembe out of the succession in a way similar to how Jacob cheated Esau out of the right of the first-born. Whereas the deception was achieved in the latter case through the tried-on garmits, it was made possible in the former case by the gloom of the hut in which old, weak Mbaryon was lying on his sickbed. He thought he had Zembe before him and bestowed Lenana in the secret urn of the ol ulmoi. The two sons now bitter enemies, who maintain a continuous civil war, to the misfortune of the Masai people. Lenana, now a man about 40 years old, lives with his followers in British East Africa, in the vicinity of the railroad station Naivasha, whereas Zembe, ten years younger, inhabits, with his herdes, the steppes of German East Africa. Both are merely phantom figures in comparison with their father, who had occupied an outstanding place in the succession of chiefs. Under him the Masai experienced their last golden age. After his forefathers Osaale and Sokpi had subjugated the Wakuafi, it rested upon him to keep down their constant uprisings and to weaken and enslave them so that no danger from them could threaten the Masai any longer. Through a well-organized spy system Mbaryon kept himself continuously informed about the conditions of his opponents, so that the rapacious warriors could always attack these very Wakuafi settlements in which a war expedition /22/ against the Masai was being prepared. The main trouble here was made by the Wakuafi of Meedeng /Ma. Meru/, who found safe hiding places for women and livestock in the clefted mountain forests, while the men undertook raids on neighboring Masai kraals. Finally, however, the Masai people were successfully mastered; indeed, they even became so pliable that they performed compulsory labor for their opponents. One must bear in mind with what deep contempt all men of the Masai people look upon any kind of work, which they regard as something disgraceful, not compatible with a man's dignity, in order to

/72 cont./
[illegible] with such a [illegible] manner. Albertus demanded thousands of workers, and they moved obediently, in endless long lines, men, women and children, toward the [illegible] area of Kiwalgo, lying

Ill. 4. Zandoa, the present chief of the Mawri.

west of the mountain, where the mighty one resided, like his ancestors. There they had to dig a long water channel, whereby -- a further particular humiliation -- the men had to work in rank and file with the women. Encouraged by these and other successes, the Mawri became more and more arrogant, and they extended their war expeditions farther and farther. It was not only the Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

The belief in the magic means for healing purposes which Albertus gave them meeting help, and whose chief ingredient questionably was the vanilla-scented, pulverized wood of the [illegible] liana, was so deep-seated in the people /73/ that it was often supposed to have actually brought to the people

[illegible]

recovery from his pains. Mbatyan owned outstanding work through the discovery of a preventive vaccination against long disease of cattle. According to the corresponding accounts of Zondwe and his old father, Mbatyan, several years before his death, had already prophesied the appearance of Kinkempat that did not take place until after it and the subsequent subduing of the blood by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of his eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in childhood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard. That is, in contrast to the other men, neither the *ol ohmi* nor the *ol ayonoti* nor *ol kiboshi* sustained further below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hairs.

The chief's village consists of a large number of kraals lying close together, several of which serve as the dwelling of the *ol ohmi* with his numerous wives. Mbatyan had about 200 wives; the still young Zondwe has only 30 of them. No strange man may enter these dwelling kraals of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (*ol dogenak ninyoi ol ohmi*) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the months of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men wandering about idly in the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

[illegible]

[illegible] them, goes toward him, and, with the customary greeting, extends his hand to him, whereby, not this, but the wrist is grasped. After the concluded discussion, for which there are no particular formalities, he takes his leave with the ordinary farewell.

In the way of food, the [illegible] takes only goat lives roasted on the fire, milk, and honey. He, through any other food, "he would suffer the loss of the capacity for prophecy and the preparation of effective magic charms." Of these are very little is supposed to have been handed down to his ancestors and will how to Zambos, through which it is all the more explicable that the [illegible] blessed today will of hundreds of different kinds of miracles that Mbwyan allegedly performed. According to them, he could fell large trees by sheer will power, or he had the hut in which he was to be found set afire by his attendant, and, after it had burned down, he appeared, uninjured, out of the ashes.

From the Ki gidoli lineage there are further supplied, as has already been mentioned, the sorcerer or medicine men [illegible] [illegible], several of whom live in each district. Their office, too, is handed down from father to son, who, however, is usually initiated into the whole secret art only after his marriage. The most important magic charm in the life of the blessed, the war medicine, the [illegible] does not know how to make. Rather, one turns to him only in cases of illness of human beings and livestock for which the well-known remedies fail, or which one traces back to the sorcery of evil neighbors, as well as to determine unknown wrongdoers (thieves, murderers, etc.).

The lineage of the Ki ikwadu of the Ki nilbiljan tribe, who, according to the view of all the people, are especially favored by 'Ng ai, the god of the blessed, which has made them primarily the bearers of the religious traditions, require a special discussion. Corresponding to their position with 'Ng ai, they are distinguished by a relative peacefulness. The young warriors, to be sure, also set out on raiding expeditions with the other lineages, but they thereby seem to avoid any unnecessary roughness or brutality, in which the others often compete. The passion for disputes, quarrels, and vituperation, a prominent trait in the character of the young

/[illegible]/

[illegible] for the consumption illness of the married man. But before the [illegible] marriage takes place the bride price is to be paid first.

As bride price (see English) - the things, each part of them, as [illegible] - the things) he then pays the bride's father five pots of honey from which beer will be brewed, furthermore three cows and so on. The bride's mother receives a male and a female sheep. The so and the male sheep will be eaten at the feast taking place on the wedding day. Around that day, more often afterwards than before, the /[illegible]/ bridegroom further brings the father-in-law a cow and the mother-in-law a female sheep that has not yet had young, whereupon the former call each other [illegible] (1).

[illegible]

1. Cf. Second Part, III, terms of address for relatives.

while the bridegroom and the mother-in-law call each other [illegible] from now on. Every wife married later receives at the wedding from the principal wife of her husband a year-old heifer, whereupon the two call each other [illegible]. From the oldest child of her husband two goats or sheep, hence the address [illegible], and from the another children of four to six years old and upward a goat or a sheep each, through which the address [illegible], [illegible], or [illegible] is brought about. During the period immediately after the wedding, the mother-in-law receives from the son-in-law several more pots of honey, skins for clothing, and iron wire for making leg and arm ornaments. In the family of Chief Zondwa he receives, as he told me, only a cow as bride price for one of his daughters, while the mother of the girl gets two donkeys, a bull and a cow with calf. Since the last rinderpest it has happened not infrequently that a man is not in a position to pay the customary bride price. He then gives the father-in-law only one cow and leads her to him on a rope twined out of grass. Whereas the bridegroom or young married man delivers the gifts of livestock himself, he always sends the honey by a woman. She is either a wife married previously, his mother, his older sister, or a wife of his brother. Only when the distance is very great does he deliver the honey himself,

[illegible]

/[illegible] years/

The circumcision of boys is a public office and is ordered by the gi ellemi. With the issuing of his order, the circumcision years (1 gi [illegible]) start begin, that is, the following four to five /[illegible]/ years during which the boys may be circumcised. In all the districts the old men were held responsible and set a definite day (1)

1. The circumcision of the boys belonging to the lineage of the El ellemi always takes place on the 20th day of the lesser month.

So the circumcision of the five divisions of the boys is question. Similarly, later, in the following years, the circumcision days, usually only one in each year, will be determined for the following divisions of boys. It should be mentioned here, beforehand that all boys circumcised during a series of circumcision years form an age class (gi [illegible]) and that this age class is given a definite name by the gi ellemi. The circumcision period is ended by the gi ellemi ordering the ni [illegible]. This is a festival which is celebrated by the five boys in

Ill. 17. Ideni boys.

Gl. Gl. Wrestlers.

It is to be observed here that the girls who have been circumcised in the period from the beginning of a series of circumcisions down to the beginning of the next series are counted to the age class to which the boys circumcised within the same period up to the [illegible] festival are reckoned.

As long as the members of an age class still belong to the warrior standing, those living in each area have their own head, the speaker (ol ngoromani), whom we shall meet again in the warrior level. But if those belonging to one ol lauk are all married, they are given a head for the entire district, the ol piyani, whom not only the people of his age class, but also those of all younger age classes are obliged to obey. It is the business of the ol oiboni to arrange matters so that in each district only one holds this rank. The discussions with regard to his appointment begin even before all the ol lauk members have left the warrior standing. The speakers of the district go to the ol oiboni and put their request before him.

/73 cont./

After he has counted off the little women of his uncle gone for a while, he decides that it, the use of it, is no because of *yuwei*. This season is secret, and the speakers also have a duty to keep its much secret for the time being. A man can only because of *yuwei* who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their own, they call together all the of *hafu* members there and, with them, again set out for the of *ishwa*. There a very large hut (*na ishgin shwaigi*) is built there. When it is finished, the speakers take a number of women into their confidence and tell them who has been named of *yuwei*. Then all gather in the hut, in the center of which stands a new, neatly carved wooden seat, toward which the one seated is ceremoniously pushed by those who have. As soon as this has been accomplished, a few of those standing around him push him down onto the seat, other place a string of blue ring-beads (*i gwadigi*) around his neck, the spiral ear ornament made of copper wire (*o wendin*), such as is worn by old men and women, into his ear lobes, weaves his hair, skin-apron (*o gwagin*) of the women, and in its place drape around him the long one of the married (the of girls) of *yuwei*. Finally all these present chant the new of *yuwei* and cry out *ningwed ni ishi of gwiboh*, that is, remain poor, living or luck. The tribal *ni gwaidi* continues that every of *yuwei* has remained poor; if he were to put himself to his level, he would soon die, his wives would bear him few children, wealth would remain denied him. But he does not need it, for every man under him is obliged to give to the of *yuwei* nothing but a fat ox and milk. Hence he is commonly on visiting trips, which explains why he has neither a large herd of cattle nor numerous progeny. In his level the land who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of freedom always prevails.

After the of *yuwei* festival is over, the other of *hafu* members wander back home and celebrate a long cheer feast (*ni bul*), whereupon they /76/ usually set out on a war expedition, while the of *yuwei* himself goes back to his level and remains there.

The principal activity of the *gi ayaaci* consists in keeping the people of his district together and preventing them from splitting up, which could be more or less disastrous for the island. Occasion for this is furnished by both the constant petty jealousies and friction between the warriors of the various areas, who, for example, not infrequently plan two war expeditions at the same time, instead of concentrating on one, and the deep-rooted stubborness of many old men, who are brilliant, in the selection of new pertaining places, to think only of the quality of the pertain, instead of also considering whether the warriors are in a position to prevent the desired place from hostile attacks. As many's serious effects not only the one who loses all his property in connection with it, but is a disgrace for the whole people. In such cases the *gi ayaaci* exerts his authority. To one who does not obey him, the authority of the *gi ayaaci* is, as a rule, made clear by the others by means of a beating. Besides this activity, the *gi ayaaci*, if necessary, acts as an intermediary between the people of his district and the *gi ailaai*, and sometimes his decisions is requested in legal disputes, but since in this case he is guided very little by legal principles, but rather by political discretion, one cannot actually designate him as a judicial personage. The conjecture that the *gi ayaaci* might have something to say in matters pertaining to the cult or might make magic amulets is obvious, but does not prove to be true.

We have seen above that every two age classes form an association. If the members of this association have all been married a long time, the *gi ailaai* binds them even closer in that he bestows upon the two age classes, each of which -- which is to be said beforehand -- has its own name, a common name. This takes place at the *gi daidi* festival. For this all the men of the association gather near the *gi ailaai* and build a large hut in the vicinity of his village. Everyone brings bamboo for housemaking or a head of cattle for the feast. The latter is then killed by suffocation, as at the *gi gidiki* festival. The festival consists of the consumption of these things, whose climax is formed by the declaration of the *gi ailaai* that those assembled henceforth belong to one association (*gi ailaai*), which only now actually exists and are to bear a common association-name.

/79 cont./

with managing them. He must then rule over the property himself, and he marries soon after circumcision. He is taken into the younger age class of the married men and designated as *ol kimojik* (pl. *ol kimojiki*) of it. In the age class of the recruits as well as in that of the warriors, those living in one district form a company 150 to 200 men strong. In order to prevent a company from becoming too large through the presence of too great a number of boys in the circumcision, which would be injurious to discipline, they have the custom of circumcision by divisions. Then a special company is formed out of one or even two annual courses, which the *ol olkoni* does by the bestowal of a special name. /79/ Otherwise every age class gets only one name or five, which is then often replaced by a new one after a successful, larger war expedition or a distinction for bravery shown or, more correctly, for particularly rich spoils, but only when the men concerned have become older warriors. The *ol olkoni* gives the next name to the *ol lapik* after it has received an *ol oyoni* to bestow the last one with the union of two *ol lapiki* into an *ol olil*, which then bears this new name until it dies out.

The pomoe (that is, 1901) younger age class is called *ol gwiliki*; it is the first of an association whose second has not yet been formed. The next association consists of the younger *ol kipsaat* and the older *ol moruaroe*. The latter were called *ol lgwaiwa* as youths and were given the name *ol moruaroe* after a successful war against the Uasinkishu men. The next association is the *l'ainoto*, consisting of the younger *ol kimojik* and the older *ol mariaka*. The former, as recruits, were called *ol malgwaka* after a war against Uaika, *ol lgwiaiwaik* and after the selection of the *ol oyoni*, *ol kimojik*. The *ol mariaka* as youths were called *ol mwaiki* after a successful war against Laikipia as *ol mwiki*, they received the name as *ol lgwa* and after the *ol oyoni* selection, their present name.

Fig. 27. Very old man.

561 /77 cont./
701 Mixed, light colors are the symbol of fickleness, frivolity, flighty,
702 childlike, and childish sentiments; they are not proper for adult men
152 with a serious conception of life. The festival lasts about a month
865 as a rule. During it the youths practice handling the weapons, tell
[822] each other gruesome war stories, which they have heard from warriors
or invented themselves, and thus stimulate their imaginations, just as
the reading of Indian and pirate stories does this on occasion among
[276] European boys. They artificially make themselves positively wild,
to which also the taking, still strange to them, of various roots and
barks with a nerve-stimulating effect (which will be discussed later),
which they add to the cooking meat, contributes a great deal. All
their yearning is directed toward war and murder, everything in them
is pressing toward killing an enemy, and enemies for them are all non-
Masai. Each of them would like soon to be no longer an ebor alem -
[721] white, that is to say, not yet dyed with blood, sword. Not infrequently
they turn against defenseless caravans if such happen to be in the
vicinity. Whether or not spoils are to be taken in this is of no im-
portance, only killing and murdering, they do not think any further.
Many attacks on caravans have come about in this way. Such op-
portunities, however, are always rarities for individual troop of youths.
561 The rule is a war expedition against a sedentary tribe. After the
701 fighting, the el barnot again return to the paternal kraal to live there
702 a few more years. During this time they attach themselves more and
[721] more closely to the warriors, in order to learn from them and to im-
prove themselves in the art of war. They accompany the warriors on
their raids and now and then also take part in their forest meals.
Nevertheless they do not gain admittance into the warrior kraal,
which is just as wounding to their self-confidence as the circumstance
that they are looked down upon by the warriors and treated almost
like boys. The wish to be on an equal footing with the warriors grows
ever keener in them. But they still lack two things for that: the
name for their age class and the shield escutcheon.

561 In order to request the bestowal of the former from the ol oiboni,
[791] a gathering (eñ giguana) (1)

1. Any gathering for a consultation is called this.

/77 cont./

561 of all the age-fellows is first convened, so that they /78/ may choose
791 a delegation from their midst. To it belongs in the first rank the speaker, then a rather large number of the strongest and handsomest el barnot. All are provided with rich adornment, as well as beautiful weapons. Each ol barnoti has brought along a fine head of
[431] cattle. The large herd formed by this is taken along by the delegates as a gift for the ol oiboni. When they have then presented their request to the mighty one, he directs them to come the next day, when he imparts the answer by giving them, for example, the name el gischon. The ones circumcised during the period from 1896 to 1901 were given this one. It is supposed to mean: the generation after those weakened and impoverished by the rinderpest. After the

714

561 delegation has been dismissed by the ol oiboni, they return to their
791 native kraals. At a gathering again held there, all learn the new
[714] name and then consult about the choice of a shield escutcheon.

/79 cont./

714 which only the brave are entitled to wear, the os serata l el kigeloni.
531 A shield emblem is complete if, in addition to the ornamental band, it also contains the red warrior-emblem.

The ornamental band is the stripe painted in the longitudinal diameter of the shield. Actually es segira is the name of the cowrie shells that, sewed on leather strips, adorn the gourd bottles. The similarity of such an ornamental band with the longitudinal stripe on the surface of the shield explains the Masai word used for this and my translation as ornamental band. The drawing of the ornamental band is unimportant and is often subject to the taste of the moment. Considerable differences exist both between the provinces and within the individual ones.

714 The most important emblem on the shield of the warriors is the
531 red warrior-emblem. Three forms of it are distinguished: the
634 double wedge (Plate 1: Figs. 2, 4, 6, 9, 13, 14, 15, 17) along the
184 ornamental band belongs to Kisoñgo Province, the segments of circles (Plate 1: Figs. 5, 7, 10, 18) on the ornamental band are the emblem for Loita Province, and the peripheral emblem (Plate 1: Figs. 11, 12, 16) shows that the bearer of such a shield belongs to Ol bruggo Province. The warrior emblem is either on both halves of the shield or only on one: the former is the rule in Ol bruggo and Loita, the latter /80/ in Kisongo. Loita and Kisongo, however, show more exceptions. If the red emblem is painted on both halves of the shield, the one half shows the mirror image of the other, so that a symmetrical double emblem results, the center line of which is formed by the ornamental band. According to my explorations, this seems to have been the fashion especially after booty-rich war expeditions. On the other hand, where the red emblem is found on only one side, the other half of the shield shows one or two large, black, bow-shaped emblems
714 (Plate 1: Figs. 2, 3, 5, 13, 15, 17, 18). These are commonly
531 found in Kisoñgo, where they have been customary for as long as the
634 memory of the people extends. They are rarer in Loita /Ill. 29 ap-
184 pears here/ and, to be sure, really only since the death of Mbatyan.
174 Mbatyan resides in Kisongo, and his bodyguard consisted of Kisongo
• 791 warriors. After his death Zendeo put together a guard made up of Loita warriors and also stayed largely in Loita in order to avoid the

/80 cont./

Denner phot.

Ill. 29. Shield escutcheons of the Masai.

714 influence of the Moschi military station better. The answer to the
531 question concerning the meaning of the black bows was almost always
634 merely that they probably served as ornamentation, since, with the
184 application of the warrior emblem on the one side, the other half
• 791 of the shield would look unattractively empty, and only a few old men
174 opined that it was originally a lineage emblem of the En gidoñ. This conception seems to me the right one, and it would explain why the emblem /81/ has been commonly used in Kisongo from time immemorial and then also came to Loita after Mbatyan's death.

714 The lineage emblem is almost never found on the shields of
531 today; thus I did not come across it until I had drawn by a number of
613 old men the shield escutcheons carried by them in their youth. The illustrations of Plate 2[1] show a collection of lineage emblems. We see there that the emblem is sometimes applied on the front of the shield surface, sometimes on the back of the shield. While the
[561] warrior emblems have remained the same for a long time, the lineage emblems were always quite variable, and it seems that each age class made up its own.

1. [See p. 608--Analyst]

/92 cont./

721 en dorosi, the en doros. For the warriors this consists of three or four
726 leather strips cut from the apron of their favorite girls, which are
714 adorned with stitched-on beads and, beside them, tied-on pieces of wood (from twigs of the ol araschi and os siaiti trees), while the leaders wear as en doros the borrowed tobacco box of a married man or his fly switch. The en dorosi obliges every warrior to take part in the ex-
703 pedition. Anyone who nevertheless stays away out of fear is most deeply despised and outlawed; any warrior may kill him without penalty. In order to give the fainthearted courage, the most daring ones not infrequently stick a ball, which has a diameter of 10-12 centimeters and is made out of black ostrich feathers, on the tips of their spears. Through this they express their firm determination to attack the opponent and to stand up to him in hand-to-hand combat, for the ball may be removed from the spear point only by one's running it into the body of the enemy.

721 The purpose of a war is always only the capture of livestock, and, to be sure, only cattle. War is not undertaken for goats and sheep. Boys may go to steal small livestock! Only the capture of cattle is worthy of a warrior; he only takes small livestock along as well when he can directly achieve this together with the cattle.

721 In order to get permission for the war expedition, the speakers
791 together betake themselves to the ol oiboni and put before him the wishes of the warriors. None of the latter accompany them, since they would behave too uncouthly in the presence of the great man, who wishes calmness and clarity in the consultations.

721 /93/ The ol oiboni keeps himself accurately informed both about
726 the strength of the individual warrior kraals and about all the condi-
791 tions of the surrounding sedentary tribes coming into consideration for a war, so that he is in a very good position to judge accurately the prospects of victory for either side with great probability. He also keeps himself posted about unimportant and secondary matters with regard to the opponent and weaves all this knowledge adroitly together in his answer, so that it sounds like a seer's pronouncement and is taken as such by the speakers and warriors. His answer -- as the speakers report it -- runs, for example: "You will attack the Kahe
[264] area; it is strong, and you will therefore first hold a twelve-day

721 /93 cont./
726 forest meal (1),
• 791
[264]

1. Ol bul or, if an en dorosi has taken place, ol bul en dorosi, or, in short for that, en dorosi, with which the present-day language also designates every forest meal prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gadet. On the following day, ol ondjori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kahe boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol onjugi day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
714 to the carelessness or mistakes of the warriors. Furthermore, for the
791 spies sent ahead of the expedition, the ol oiboni gives them a few
789 amulets (e mascho ol oiboni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is snake eggs (mossor ol assurai). A large leg-bell (ol dualla kitok, Fig. 19) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the
726 medicine be hurled by a left-handed warrior. The speakers convey the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal; weapons, pots, and the livestock needed are gathered together, and two by two the es sirit set out together for the nearest bush. Whereas
[263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorosi in particular all the many vegetable agents that the

Fig. 19. 1/3

232 horny scar often five centimeters high, /171/ through which the
233 inoculated animals, which are now supposed to be protected against becoming sick with tuberculosis, are permanently marked. Numerous observations in this direction showed me the justification of this view. [176] The ol oiboni Mbatyan is regarded as the inventor of the inoculation [791] method.

In some years, and, to be sure, in the rainy season, great [136] multitudes of dark green caterpillars one to one and a half inches long are found in the grasses of the steppe. Cattle that eat the caterpillars are stricken with eng ea el gurt (ol gurto = the caterpillar). As symptoms of the sickness I observed: first a few hoarse coughing sounds, then giddiness, which rapidly mounts and makes the animal stagger as though out of drunkenness; soon it lies down and is brought to a standing position only with difficulty, only to lie down again after a few minutes, whereupon death occurs often after only half [411] an hour. The treatment consists of bloodletting by an arrow shot (Fig. 76) into the jugular vein, whereby one to one and a half liters of blood is emptied out. Through that recovery is reached after just a few hours, as I observed in over 100 cases (1).

1. The microscopic examination of blood slides (ear, heart, spleen) of sick and dead animals gave a negative finding (Oberarzt /staff physician/ Dr. Grothusen). I observed the appearance of masses of the caterpillars in March, 1898, in the steppe south of Kilimandscharo, in December, 1902, in the steppe southwest of Kilimandscharo, in the entire region between the latter and Lake Manyara, and in April, 1905, in Daressalam /Dar es Salaam/.

[177] In another case, out of four head of cattle, after two had already died of the sickness, the other two, through the infusion of an emetic consisting of a mixture of sugar-cane beer and a tobacco extract, which was given upon the advice of the Wapare in Manamata on the southern end of Lake Jipe, could be cured.

752 /192 cont./
that of an egg or even amputates the member (hand, finger, toe), if
[758] this seems to him absolutely necessary. After the operation the patient is given raw sheep kidney to eat and a considerable amount of liquid sheep fat to drink, whereupon severe diarrhea soon sets in. Often one has him go through a sweat cure in that he is set over glowing charcoal on which leaves of Barleria mucronata and sheep hair are thrown.

On a scorpion sting (a-tonjo eñ golówa) one has a woman who has given birth to twins or, lacking such, a pregnant woman spit and rubs the saliva over the painful spot. As long as the pain continues,
[262] the patient eats only raw goat liver, to which is ascribed some kind
[791] of marvelous effect -- as is also shown by the fact that it is the only solid food of the ol oiboni.

Into the wound caused by a poisoned arrow another person urinates
[759] as quickly as possible. At the same time the wounded one is given as an emetic a mixture of the juice of the fruit of en dulele (Solanum campylacanthum) and the amniotic fluid (eñ gèba) of a gravid sheep, which is slaughtered for this purpose.

757 For conjunctivitis (eñg ga eñ goño) a tobacco extract (eñ gare ol gumbau) or the juice of leaves of ol ogildia (Coleus kilimandscharicus), ol dungui (Harrisonia abyssinica Oliv.) and ol assajet, or an extract of the leaves of ol gummi, is dripped into the eyes.

752 The surgeon removes the remains of a violently destroyed eye, by drawing it out of the eye socket, with an awl bent hook-shaped, far enough so that he can cut it off with the razor. The eye socket is then washed out with warm water and not bandaged afterwards.

A place that has suffered a sprain or bruise the El dorobo rub
[171] with the juice of ol gerigus (Iatropha spec.). Sometimes they also apply the same drug by the method of rubbing the powder of the charred twigs into small incisions that are made on that place.

/193/ Dislocated limbs are set again and placed in a splint bandage that is not stiff. For a lower-arm dislocation the surgeon sits on the ground in front of the patient, grasps his lower arm just above the wrist, and sets it again by a gradually stronger pulling exerted in the required direction. He then puts around the affected
[237] part, from the middle of the lower arm to that of the upper arm, which are drawn together at an angle of 135°, a padded bandage consisting of a strip of sheep leather that is covered with as much thick and soft hair as possible. The padded bandage is tied with a

/201 cont./ Later, upon passing
764 the place, one again throws a stone or a handful of grass on that spot
[765] where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being.
[782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

766 In contrast to the simple exposure of the corpse, that of a chief
[791] (ol oiboni), of a married man of the El kiboron lineage, and often
[613] also that of a sorcerer (ol goiatiki) is buried. The bottom of a pit
[764] a meter deep is covered with a neat's hide moistened with fat, and
[237] upon this the corpse is laid in the position described above. A second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

/202 cont./

766 stamped down firmly so that hyenas will not be able to dig up the
[791] grave. The chiefs grave, as well as often the graves of the El
[613] kiboron old men, are crowned with a larger or smaller stone mound.
[769] Later, as a sign of veneration for the dead, Masai passing by will
[778] throw a few bunches of grass on the latter, whereas on the former, which is regarded as sacred, they from time to time pour a little milk as an offering.

766 Concerning the burial of Mbatyan, his son Zendeo told me the
791 following: When he ol oiboni died, ~~his~~ large bodyguard was gathered around him, and immediately warriors set off in all directions, in order to bring the sad news to the kraals lying far from one another. From everywhere Masai came streaming in, the relatives of the deceased all appeared, down to the smallest infant. Every mourner brought a few fat-tailed sheep along, which, after a large herd was assembled, were slaughtered. Meanwhile the corpse had been laid out on a neat's skin. Beside this the closest relatives laid their leather aprons and others added theirs in a line ca. 100 paces long, the aprons being placed so that they formed a channel. Now the boiled-out fat was poured on the corpse and flowed along the channel. Then the body was buried, whereupon all the people brought grass and heaped a pile several meters high over the grave, which was then covered on the sides as well as on top with layered stones. In contrast to this description, there is a rumor circulating repeatedly among the people according to which Mbatyan, several days before his death, in a state of mental derangement, is supposed to have secretly left the kraal at night and wandered about in the steppe, without the men of his guard, who had followed him, being able to find him. Then, when he was found on the fifth day, he was dead and his body already decomposed.

768 If in one kraal several young people or even children have died of some illness within a short time, it is abandoned, first because it is regarded as unlucky, but then also /203/ to enable the survivors to forget the sad event more easily. In such cases of death one can always observe deep sorrow among the relatives, whereas the death of old people, even own parents, is accepted more calmly. "The old ones are now resting, they sleep, their time has come."

/209 cont./

796 participants eats a small piece of the meat, after he has roasted it
782 in the ashes. Furthermore he is given a strip of the skin, from which
[751] he then fashions amulet rings, one for himself, the others for his
[237] relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the par-
[539] ticipants constantly sing:

Hai narok, oho, Hai kindera ije, oh,
Hai narok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; aïdog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 On the following day the women carry fresh cattle dung to the
782 ashes and knead a mash from it, into which is mixed a medicine
233 that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor l oñ gischu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

796 Another supplication feast is celebrated only by the married
782 women in order to implore God to give them children. It is called
842 iruga 'Ng ai ol adjo, i.e., may God hear the word. In or near the
• 791 kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

/299 cont./

000 Among them the boys were clipped (circumc.) at the age of 10-12, the girls at the age of about six (exc. clit.). As bride price the husband paid the father of the bride 40 beehives and 12 pots of honey. After the birth of a child the woman did not leave the hut for five days. On the day of the first walk outside, her head and that of the new born child were shaved.

Several times during the month whole bands of older women and men, laden with honey and clay pots which they made themselves, set out for tribes engaged in agriculture, in order to get vegetable foods in exchange for them.

/300/ Nothing is known to my informants about the significance of the animal figures made out of clay that were seen in their kraals and huts.

They called God Schábischab.

173 In contrast to the extensive and firmly established traditions from the remotest past stand the paucity and uncertainty of the information from more recent times. Coherent historical memory does not extend beyond a generation; what lies before that is uncertain. The somewhat certain information tells of war expeditions, livestock epidemics, drought, and similar unimportant events.

173 561 791 Therefore only the series of the age-class associations, which, incidentally, also has gaps and is uncertain, and that of the chiefs are still to be completed:

El diëgi	ol oiboni: Kibebete.
El kisaroni	ol oiboni: Sitonik.
El merischari	ol oiboni: Subet.
El kidotu.	
El duati	ol oiboni: Mbatyan.
El ñiañgussi.	
'L aimerr	ol oiboni: Lenana (1).

1. Zendeo only belongs to the age class of the El kipuani, which at the present time is attached to the next older one, the El meruturut, not yet to an ol adji.

good management on modern ranching lines will bring him in hard cash.

I saw the ranch mainly from the air. Lines of bush, cleared by bulldozers dragging giant chains between them, lie neatly along the contour like windrows in a hayfield. Soon the six or seven thousand acres that have been cleared will be fenced, and so managed that star-grass will cover them and steers fatten twice as quickly as they normally do. The snag, of course, is the Masai indifference towards cash.

Yet even here the seeds of change begin to germinate. There are schools now in all Masai centres, Masai students at Makerere, the start of a trickle of Masai teachers, doctors, administrators, vets. One has a Cambridge degree in geography, one is a Legislative Councillor. The shell of Masai indifference has been pricked.

The puncture so far is tiny, but time will enlarge it and one day, not so far away either, the whole shell may crack. Already a Masai parson, the Rev. Daudi Mokinyo, has fenced off 2,000 acres of communal grazing where he fattens steers bred from improved bulls, has a simple milking bail and makes ghee. Elsewhere, half a dozen other Masai have fenced in grazing land. When the railway took a pipeline off Mt. Kilimanjaro, they set up watering points for Masai cattle along its course, and in return one section of the tribe, the Il Kisongo, agreed to operate a pasture-management plan, financed by a grazing fee, which is acting as an entry-point for new ideas.

When these movements spread, as they seem bound to do, the doom of the game will be accomplished. For game cannot co-exist with modern pasture management. Unless the Masai come to see game as an asset of high value, it will go here, as it has on European farms, and for the same reasons: it will go down before the fence, the improved pasture and the need to keep the land free of disease.

VI

To admire pictures in the National Gallery, cathedrals of the Middle Ages or the antiquities of Greece is considered

/208 cont./

782 bestrew the individuals with the blades of a fodder grass prized for cattle, and say the prayer. This runs: 'Ng ai pasinai, nia iŏk ń gischu, jo ijok ń gischu kumok, ninguа ijŏk ĕlolońga = may God give us cattle, give us many cattle, keep us healthy. While driving the captured livestock together, they sing a song of praise, which begins with the words; Hai narok, oho, Hai kindera ije oh = black God, oho, we hurry near, oh!

In sickness, both the patient and his relatives pray for health for him. In serious cases of illness a black ram or a black ox is slaughtered, and part of its blood is poured on the floor as an offering to God. If the sick person is an old man or an old woman with numerous descendants, one slaughters a likewise black, gravid cow, whose calf is left lying outside the kraal for God, after the place has been sprinkled round about with the amniotic fluid.

• 796 782 Both in order to honor God and at the same time to supplicate him for something, the Masai celebrate feasts at approximately monthly intervals; these usually take place on moonlit evenings, more rarely they start in the morning or early afternoon.

One of the most frequent supplication feasts (ol ogŏr = the supplication feast) is the ol ogor l ol geretti, which during some periods and in some regions is celebrated almost every month, in others at considerably greater intervals, by the married men and the boys together, in order to supplicate God for the preservation of the health of human beings and livestock. In the kraal a large fire is kindled [372] [824] with dry wood (from the ol oirien tree), upon which green wood with leaves (from the os segi tree) (1)

1. Cordia quarensis Gürke.

is tossed, so that a strong development of smoke comes about. A [824] powder made from the wood and bark of the ol mogońgora liana, which smells like incense, is sprinkled in the fire. The thick column of smoke climbs toward the sky and takes the fragrance to God. Now one leads up a large black ram, washes it carefully [824] with honey beer, and sprinkles it with the powder of the e matańguju tree. Then it is suffocated, drawn, and cut up. /209/ Each of the

/209 cont./

• 796 782 participants eats a small piece of the meat, after he has roasted it in the ashes. Hai narok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; aldog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 782 233 On the following day the women carry fresh cattle dung to the ashes and knead a mash from it, into which is mixed a medicine that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor l oñ gischu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

796 782 842 791 Another supplication feast is celebrated only by the married women in order to implore God to give them children. It is called iruga 'Ng ai ol adjo, i.e., may God hear the word. In or near the kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a [272] [237] buffalo or cattle horn, drink a mixture consisting of milk, a cold [415] extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a [824] white powder obtained from the ol oiboni, while they say the /210/ [539] prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 783 If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, [784] provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

114 customs of the Masai are both numerous and varied, but comparatively little is known of their language. The following
113 books, which contain either short vocabularies or grammatical
114 notes, are probably all that exist[1].

I. *Vocabulary of the Engutuk Eloikop*, Krapf, Tubingen, 1854.

II. *Vocabulary of the Enguduk Iloigob*, Erhardt, Ludwigsburg, 1857.

III. *Life, Wanderings and Labours in Eastern Africa*, New, London, 1874.

IV. *Nubische Grammatik* (Einleitung), Lepsius, Berlin, 1880.

V. *Massailand-Expedition*, Fischer. (Mittheilungen der geographischen Gesellschaft in Hamburg, 1882-3).

VI. *A Visit to the Masai People*, Last. The Geographical Journal, 1883.

VII. *Die Sprache der Il-Oigob* (die sogenannten Wakuafi und Masai). Grundriss der Sprachwissenschaft (Band III), Müller, Vienna, 1884.

VIII. *Polyglotta Africana orientalis*, Last, London, 1885.

IX. *The Kilima-Njaro Expedition*, Johnston, London, 1886.

X. *Durch Massailand zur Nilquelle*, Baumann, Berlin, 1894.

XI. *Masai Grammar*, Hinde, Cambridge, 1901.

XII. *The Uganda Protectorate*, Johnston, London, 1902.

121 My endeavour in writing this book has been to place on record some of the thoughts and ideas of the Masai people, before their extinction or their admixture with Bantu elements and contact with civilization renders this an impossibility. The stories, the proverbs, the riddles, the songs, and the account of the customs and beliefs of this interesting people are all given in the words of the relaters themselves.

000 My thanks are due to Sir C. Eliot for many valuable hints, and for the kindly interest he has shown in my work;
[128] to Mr. W. J. Monson for the free translation of the songs
[127] and prayers; to Mr. R. J. Stordy and to Saleh bin Ali for the loan of their photographs; and to the Director of the Royal Botanic Gardens, Kew, and to the officials of the Agricultural and Forestry Departments, East Africa Protectorate, for determining the names of the trees and plants.

797 In conclusion I wish to pay a tribute of the highest praise to the work of the Church Missionary Society in East Africa.

[1] When this was written Merker's book *Die Masai* (Berlin, 1904) had not been published.

FL12 Masai FL12

Some years ago this body conceived the idea of educating at their central station at Freretown, near Mombasa, a few of the most promising of their up-country converts. When sufficiently advanced, these boys or men are sent back to their homes and become teachers of the Gospel. Thus, one Ol-omeni[1], a member of the Oikop or Lumbwa Masai, who had spent some years under the able tuition of the Rev. A. R. Steggall at Taveta, was baptized under the name of Justin, and completed his education at the coast. He is now one of the principal supports of the Society in Southern Masailand. To the kindness of the Society in lending me Justin Ol-omeni's services, and to the diligence of Justin Ol-omeni himself, I am in a large measure indebted for the material contained in this book. Philologists will possibly be interested to hear that there exist Masai (and possibly members of other tribes whose language has ever been a closed book) who are able to correspond with one another in their mother tongue. I have in my possession, for instance, several letters written in Masai.

As a well-wisher of the Masai and one who has known them for a decade, I consider that every support should be given to the Church Missionary Society and to the other Missions engaged in proselytizing in their midst, for it is only by the gradual and peaceful civilization of the tribe that they can be saved from extinction. The encroachments of civilization are beginning to be felt in East Africa; and the famous Rift Valley and the high plateaux where the fierce, bloodthirsty Masai once reigned supreme, are now becoming colonized by the white settler. It has often been proved in other parts of the globe that the native, on the advent of the white man, alters his habits or ceases to exist, and it is to be hoped that the Masai will choose the first of these alternatives.

A. C. HOLLIS.

NAIROBI,
EAST AFRICA PROTECTORATE,
May, 1904.

[1] Ol-ōmeni means He who is despised. When this name was given him, he was a small, sickly child, and not expected to live.

SECTION 3.—EDUCATION.

Unpopularity of education—Mission work—School at Ngong—Necessity for education—Proposed stock farm—Pure-bred bull—Sir Henry Belfield's comments on development of the Masai.

Perhaps in no direction do the Masai demonstrate their conservatism more clearly than in their disinclination to emerge from ancestral custom and tradition by means of education. The whole system of tribal life is against progress and education appears to be generally unpopular among young and old alike. The elders deprecate such an innovation as applied to the boys, as they desire to keep their children at home for work with the sheep and cattle in order that they may live at ease while their sons do the work, and the Muran resent the idea of any system of control and would not willingly submit to a discipline in order to assimilate a knowledge of which they consider they stand in no need. This attitude of the Masai has no doubt been responsible for the almost total absence of Missionary activity in the reserve. Unpopularity of education.

One or two members of the Masai tribe have attended Mission Schools, notably the African Inland Mission at Kijabe, but it cannot be said that the results of such instruction have invariably been successful. There are no established Missions in the reserve, though attempts have been made by certain Missionary bodies to obtain from the Masai permission to erect a station. These attempts have met with no encouragement from the Masai and nothing has been done. Mission work.

During 1917, a school was opened in the neighbourhood of Ngong Station under the auspices of the Church of Scotland Mission, Kikuyu. This school was placed under the tutelage of a native teacher and about forty Masai children attend daily. Reading and writing in Masai and a little arithmetic are taught as well as the rudiments of agriculture, and as far as it goes this school may be considered to be a success, but it cannot be said that its establishment has gone any distance in solving the problem of the education of the Masai or of removing their aversion to the introduction of this means of disseminating civilization, by rendering them as a whole amenable to Missionary influence. School at Ngong.

Mr. Hemsted has repeatedly given it as his opinion that the education of the Masai is one of the most important steps that must be taken in order to weaken the conservatism of the tribe and induce them to emerge from their old and antiquated habits. The moral and physical degeneration of the tribe that was a natural result of the aimlessness of their existence and the want of a definite occupation could only be remedied by the provision of an object upon which their attention might be concentrated. In September, 1913, he asked that money might be set aside for the erection and maintenance of a native school, but this money was not forthcoming. Arrangements were then taken in hand whereby the Agricultural Department should give instruction to the tribe in the improved methods of tending and breeding stock, but these fell through before completion. In August, 1914, it was suggested that provision should be made for a Veterinary Officer to be stationed permanently in the reserve who would, in addition to veterinary work, impart a course of instruction in the care of stock, paying special attention to the method of dipping. This scheme also fell through owing to the lack of available funds following the outbreak of war. Necessity for education.

In January, 1917, Mr. Hemsted submitted proposals for the establishment of a stock-farm for the Masai. It was, he said, generally agreed that the policy of the Government in regard to the Masai was to develop them as pastoralists and to recognise the reserve as a source of supply of cattle and sheep for the European parts of the Protectorate, and also eventually for export. One of the first essentials of such a policy would be to induce the Masai to aim at quality rather than quantity. Under existing conditions, the reserve was stocked with cattle of a most inferior quality, among them being an undue proportion of bullocks and aged and barren cows. Experience gained in connection with the purchase of supplies for the military authorities showed that a comparatively small number of their animals could be considered to be of the quality desirable for food purposes. In the old days, when the Masai were able to roam over the greater part of East Africa and there was little or no demand for their stock, the number of cattle they kept was immaterial. In those days the breed of their cattle benefited by the constant introduction of fresh blood obtained in the numerous raids they Proposed stock-farm.

Wa-Kwafi

174 Arusha-wa-jûû. Others, driven south, threw in their lot
166 with the Wa-zeguha, keeping tribally more or less distinct from them. These are the hybrid tribes visited lately by
[797] the energetic missionaries, Messrs. Last and Baxter, and of which such interesting accounts have been given in the "Proceedings of the Royal Geographical Society." Another section of the Wa-kwafi was driven westward, and now forms the colonies of Nderserria-ni and Nguruma-ni. The establishment of these colonies has been an unmitigated blessing to the country. In every case they have become the centres of trade, where men's lives and gooods are safe; and indeed there is no more striking feature in the results of the enforced change in the people's mode of life than the remarkable development of peaceable habits and honest ways. This shows what the Masai, from their distinctly higher mental development, are capable of, when cut away from their traditions and brought under conditions more favourable to their advancement towards civilization. As throwing light on the origin of minor races and the blending of two distinct types as at Taveta, the subject is an interesting study.

The Wa-kwafi were not all scattered thus, however, for a large division of the clan kept together, and contrived to cut their way through Kikuyu and to reach Lykipia, where they settled.

175 Another section crossed the meridional trough and reached
726 the opposite half of the plateau in Guas' Ngishu. In both
628 districts they found superb grazing-grounds and plenty of elbow-room, and there for a time they remained quietly, and increased rapidly in numbers. At last their wars began again. Grown bold, they attacked the Masai about fifteen years ago. The opposing parties formed regular camps, and fought pitched battles with great fury, thousands being killed on both sides. The women stood by and watched, while they incited and urged on the combatants in their terrible hand-to-hand encounters. The Masai were at first beaten, but, fighting with the stubbornness of despair, they disputed every foot of ground. They were driven from the whole of Naivasha and Kinangop, and their enemies, still victorious, carried the war into Kaptè. Matters now changed, however. The Masai of the entire region to the south gathered together and came to the assistance of their brethren of Kaptè. Soon the tables were turned, and the Wa-kwafi were gradually forced back. The great majority of them

II. MASAI GROUP

THE MASAI

HISTORY

The first Europeans to become acquainted with the Masai were the missionaries Krapf and Rebmann as long ago as 1848; and a short account of the institutions of the Masai was given by Krapf in the introduction to his *Vocabulary of the Engutuk Eloikob.*[1] In 1882 the German naturalist Fischer managed to reach Naivasha, but had to return owing to the hostility of the Masai, and it was not till 1883 that a European, Joseph Thomson, succeeded for the first time in traversing East Africa from the coast to Lake Victoria through the heart of Masailand. At the time of Thomson's visit, cattle-plague (rinderpest or pleuro-pneumonia) was raging among the Masai cattle, and this disaster was followed shortly afterwards by an epidemic of smallpox. After Thomson came the Hungarian Count Teleki who also passed through Masailand without conflict, and found the cattle-plague still raging. This was in 1887. In 1890 the Imperial British East Africa Company, having established a station at Machakos in 1889, decided to establish a station on the Masai-Kikuyu frontier. " Ngongo Bagas," a well-known caravan camping place on the east of the Ngong hills, was the site chosen; but Captain Lugard, who was given the task of building it, chose Dagoreti, a few miles nearer Kikuyu, as being more suitable. At this period, Masailand was cut in two by its partition between Britain and Germany, the Kisonko country falling mainly in German territory, and the rest of the Masai to the East Africa Protectorate. The Masai themselves were also split by the feud between Ol-onana (Lenana) and his brother Sendeu, which was not settled till 1902; but Ol-onana having acknowledged British rule after overcoming his brother, the Government had no serious trouble from the Masai, and there were no expeditions against them like those sent against the Nandi, in which Masai levies actually took part on behalf of the Government. In 1904 two Masai Reserves were formed, one in Laikipia north of the Uganda Railway, which was extended to the south of Rumuruti in 1906, the other south of the railway between Mount Susua in the north and the Anglo-German frontier in the south. In 1911 an agreement was made with the Masai to move the inhabitants of the Northern Reserve into the Southern Reserve, which, to accommodate them, was extended on the east as far as the River Kikalelwa, a tributary of the Tsavo, and on the west to the River Mara; subsequent extensions added a few square miles at each end. The move began in June, 1911, but came to a stop owing to the congestion of people and cattle in the Mau region, and many of the Masai returned. A year later the move was begun again, and as all went well this time, it was completed by March, 1913. In German East Africa the Masai were confined to an area bounded on the north and west by the Kondoa-Mbugwe road, thus allowing the Masai of the East Africa Protectorate (Kenya) to penetrate to Loliondo. Early attempts at missionary work among the Masai were not successful, except among the Il-Arusa. In 1919 Sandford noted that " there are no established Missions in the Reserve, though attempts have been made by certain Missionary bodies to obtain from the Masai permission to erect a station. These attempts have met with no encouragement from the Masai, and nothing has been done."[2] A Government school was established about 30 years ago, and a branch of the African Inland Mission has been working in the Reserve for some years.

Foreword

by Professor Dr. Fritz Hommel, Munich.

114 773 171 The reports of the deceased Hauptmann /Captain/ Merker, causing a sensation in his time, about the legends of the Masai so remarkably connected with the Hebrew early history are even today still capable of arousing the most widespread interest. The question as to whether traditions preserved for millenniums from the Arabian original homeland of the Masai people actually exist here or whether a Christian or even Jewish influence is not still to be assumed has not yet been silenced. As is known, Merker himself was unshakably convinced of the absolute impossibility of the latter assumption, and even if such an influence had nevertheless taken place, which is highly improbable in view of the reasons cited by me below, it could only have happened in the early period when the Masai were still living in the north, in the neighborhood of Abyssinia, which, however, also serves again as the basis for strong scruples.

114 177 797 773 First of all, mystification on the part of Merker, whose reliability is beyond all doubt, is completely excluded. Actually, it was only after a long acquaintance with the Masai of his region that he gained the confidence of those old Masai men who finally imparted to him the traditions otherwise anxiously kept from strangers; the distinguished Masai expert, our Bavarian compatriot Deeg, and furthermore African experts such as Schillings and Dr. Sander, are equally firmly convinced that Christian influence through the missionaries working there for only a comparatively short time, toward whose efforts the warlike and proud Masai have been very intractable up to now, is quite inconceivable. If the English Masai-missionary Albert R. Steggall, who was active there 1889-1905, says in the Expository Times, XVII, June, 1906, p. 429, that [115] Mr. A. C. Hollis, this eminent authority on the Masai living in British East Africa, related to him from a Masai boy in his service, "that the Masai from whom Captain Merker got much of his information was for some years, during the Masai famine, connected with a Roman Catholic Mission in the neighbourhood, as indeed were many others, besides those who came under instruction

/xiii cont./
114 in the Church Missionary Society's station in Taveta" /cited in
177 English/, this, as Merker himself told me, can only refer to a
773 Masai man from whom he received other information; since for
• 797 the many investigations on /xiv/ which his ethnological work is
[115] based (habits, customs, names, etc. etc.), he had quite different
114 informants, of course. And Hollis' objection (1)
773

> 1. Personal communication from the researcher, highly esteemed by me, whom I had the good fortune to become acquainted with in September, 1908, in Oxford (at the Kongress für Religionsgeschichte /Congress on the History of Religion/), just as I was also able to become personally acquainted with the deceased Merker in 1907, after I had previously corresponded with him, which was extremely valuable to me in view of the so highly controversial Masai problem.

that he (Hollis), who was also acquainted with the Masai of his region for many years, would then also have had to come across the traces of such early history is only an argumentum e silentio. Either the more southerly Masai (in German East Africa), with whom Merker worked, were more faithful guardians of those ancient treasures, which is not impossible, or Merker also had more luck in gaining their confidence on this point than Hollis, who, just there, did not come across the right people. Merker, however, indeed also expressly states in the foreword to the first edition that it was not until the fifth year after the beginning of his work that he came across those traditions from ancient times, which by no means commonly cross people's lips, but are handed down only in particular families and there are only ever to be found among a few old men. And then it took another year and a half before Merker had completely learned what is set down in
114 his fourth chapter. Moreover, even according to Hollis (cf. also
776 C. Eliot's introduction to A. C. Hollis, The Masai, their
782 language and folklore, p. xix), the monotheism of the Masai
113

/303 cont./

*121 174 The last possibility, an immigration across the Red Sea, is out of the question for the Masai. Livestock-raising nomads cannot travel in this way with their herds.

I therefore come to the conclusion that the Masai had already moved into Africa long before the period from which we possess Egyptian documents. With this answered; the first question is already for the influence of Babel, whose civilization did not arise until the fourth millennium, could by no means have been so far-reaching then, and, moreover, the shamanism of the Sumerians still prevailed there at that time. But even if one could postulate a later immigration of the Masai into Africa, there is still lacking any reason for the assumption that the Masai had ever been sedentary. This, however, would be the basic condition for the possibility of Babylonian influence. Babel, with its so much higher civilization and its mighty army, would have been able to draw into its orbit a sedentary people of agriculturalists; but it could not have exerted an influence on a nomadic steppe people, either through mental superiority or through force, without previously robbing it of its independence. Loss of independence for such a people, however, means nothing other than decay of the people's stability -- extinction. Also, however, if an influencing by Babylon were conceivable in temporal or local terms, the possibility of such would be most clearly and positively excluded by the content and spirit of the Masai tradition itself.

*121 • 797 177 174 [115] In order to eliminate the second case, there is first to be substantiated the fact that, as far as we know up to the present time, never and nowhere have Islam, Judaism, /304/ or the Christian missions been able to exert an influence on the Masai people restlessly wandering across the steppes. I must also exclude the possibility that my informants (people 50 years of age and more) could have been influenced on those points in the aforesaid ways, according to my investigations conducted exhaustively along these lines. Moreover, the people assert most emphatically that they learned those accounts from their fathers, who allegedly in turn heard them from their fathers.

/304 cont./

*121 • 797 177 174 Now the fact that missionaries of whatever faith, as far as we know, have never exerted any influence on the Masai people does not, to be sure, exclude the possibility of an influence in the aforesaid direction on single individuals who, be some chance, for example, in war as war captives, were separated from their people. That these then returned to their people and were able to report what they had heard there would likewise be conceivable. Be that as it may, however, could some missionary activity among the Masai that has remained unknown to us or the circumstance that persons individually taught by missionaries were anxious to disseminate what they had heard among their fellow tribesmen really have put the Masai in possession of those accounts such as I found among them? *121 *773 797 177 174 Would it perhaps be possible that Israelitish, Mohammedan, or Christian dogmatists, none of whom have any tradition older than that of the Hexateuch for those myths, could have disseminated them in the form in which I found them among the Masai, in a form that is much older and more original than that of the Bible and that has much to report that was already forgotten at the time of the drawing up of the Biblical texts in question, or what, through the further development of religion, to which the sedentation of the Israelites gave a mighty impetus, had long been displaced and supplanted by new ones corresponding to the newly achieved cultural level? The differences that separate the myths of the Masai from the Biblical ones will be pointed out in the comparison to follow and will show us that the Masai could not have arrived at those accounts through the intervention of the missionaries, who -- I repeat -- could only have drawn upon the Hexateuch.

Now one could perhaps interpose: is it not possible that missionaries imparted to the Masai these primeval-age reports in their Biblical form, and that the Masai then altered them in accordance with their understanding and their way of thinking? This is to be *[171] answered: how can one then explain the fact that the Masai arrived at precisely the form that, though no longer contained in the Bible in clear words, is nevertheless still to be recognized from it? I am thinking, for example, of Jahve's /Yahweh's/ struggle with the dragon preceding the creation, further of the assumption of only

/304 cont./

*121 one forbidden tree in paradise, then of the first murder as the cause
*773 for the deluge, of the clearly recognizable separation, at various
*171 points in the Masai tradition, of source material woven together in
• 797 the Hexateuch, and finally of many other /305/ passages that will
177 be pointed out in what follows. Are these all supposed to be coin-
174 cidences? If it were only a question of a single point one could perhaps provisionally, for want of a better explanation, accept the assumption of a coincidence. But then one can not go on doing that forever when the correspondences pile up to such an extent. This also applies in linguistic respects, for the similarity of sounds in the personal names of both series of myths and for the meaning of names for which the Bible gives no explanation and which the Masai tradition interprets in a sense contained in the corresponding Biblical account, such as, for example, the names Naraba and Eramram.

Further, however, it is also to be considered that the primeval-age tradition that I found among the Masai and for which the Bible contains parallel passages concludes with the epoch of the law-giving. This fact gives further important proof of the impossibility that it could have been foreign dogmatists who brought the Masai those myths. Though in and of itself it is conceivable that Israelitish religious messengers might have made a particular impression on those accounts from antiquity, it is nevertheless most improbable that they would have limited their teaching solely to these and would not also have spoken of Jahve's action in later times. Christian or Mohammedan missionaries, however, would not make the material in question the most important and only subject of their teaching activity at all, but would fashion it for a dissemination the essential teachings of Christ or Mohammed.

*121 There remains only the third possibility, namely, that the
*773 presentations of the Masai, the Israelites, and the Babylonians (1)
*171
174

1. The question as to which population stratum is involved here is to be left open.

After the war the German titles were invalidated. In 1921 Sir Charles Ross purchased the title to, or a lease on 16,309 acres of the Crater to preserve the game and provide himself with a winter home. He never was able to be in residence, however, and there was a long litigation between him and the Tanganyika Government which ended by their repossessing the land when the said lease expired in 1940. Apparently a Captain G.H.R. Hurst also had a farm in the crater "for several years" after the war (Joelson, 1928).

There were a few European ranches along the north edge of Western Masailand in Kenya prior to 1911. At least one of these was owned by a Major Carnegie in the Lemek Valley north-east of Aitong (Kenya Game Dept., 648 1911). All European lands in Western Masailand in Kenya were given to the Masai as a result of the treaty of 1911.

[797] At Narok, Loliondo, and Ngorongoro Crater there are District Administration offices and missions. [871] [758] Being a District Headquarters Narok also has a Masai school and hospital. [439] Periodically Europeans, especially South Africans, have run small stores here and there in the area. We were told that one was at Guaso Nyiro,

/156 cont./

802 after the other, from the little finger to the thumb, into the palm of the hand. While one then further counts in like manner on the fingers of the left hand, those of the right one remain closed and only its thumb is moved freely. After turning down the thumb of the left hand, the one counting raises both hands, now closed into fists, and says: tomon (= 10). For counting further, one begins anew in the same way and does not continue, say, on the toes.

• [801] [171] The Masai count neither human beings nor cattle. It is believed, as the Israelites also did, according to 1st Chron. 21, that the ones counted would die. Thus, they correctly estimate larger multitudes of living creatures in round numbers, and small ones with quite great certainty. Only dead persons, for example, the fallen warriors, are counted individually.

192 826 [754] The names of the fingers might be mentioned here: thumb = ol moruo kitok, that is, the big old one. Index finger = os sogutihoi or ol osokutoni, that is, the sorcerer; if one wants to make someone ill through sorcery, one spreads the magic medicine under the nail of the index finger and, murmuring a curse, one points with it at the person concerned. Middle finger = ol gerĕti, that is, actually the strip of skin worn ringlike on the middle finger. Fourth finger = ŋgoto eṅ genenja, that is, mother of the little finger, which is called eṅ ginjenje or also eṅg ilinda.

802 Ordinals: ol oiturŭgu = the first /masc./, ol iaré = the second /masc./, ol ioguni = the third /masc./; eṅ aiturŭgu = the first /fem./, eṅ iaré = the second /fem./, eṅ ĕuni = the third /fem./. The /masc./ (the /fem./) (general), ol (eṅ) abaye; the last in the meaning of the rearmost is called ol abaye ta gorom; the one standing on the right end of a row (to the right of the one judging) is called ol abaye t' eṅ gaina ertatenne (eṅ gaina = the hand, ertatenne = on the right). the one standing on the other end, ol abaye t' eṅ gaina ekediĕnje (ekediĕnje = on the left).

Once is called nabo katá (or nabo gadá); twice, kat' aré; three times, kat' uni, etc.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Suk, kōte; Turkana, akotok). I think traces of articles can be detected, and Nandi certainly has many formative elements combined with the essential part of the word, such as *-t* and *-da* to mark the singular, and *k*, *nek*, and *wek* for the plural. When the precise force of these prefixes and affixes is known, the degree of relationship with Masai will be plainer. The verbal forms quoted from Nandi seem very similar to those in Masai. 197

Nandi.	compare	*Masai.*
Aonget ane, I know.		Asuj nanu, I follow.
Inget inye, thou knowest.		Isuj iye, thou followest.
Ingen ni, he knows.		Esuj ninye, he follows.
Kinget acek, we know.		Kisuj iyook, we follow.
Onget akwek, ye know.		Isujusuju 'ndae, you follow.
Inget iceke, they know.		Esuj ninje, they follow.
Maonget, I do not know.		Masuj, I do not follow.
Minget, thou knowest not.		Misuj, thou followest not.
Minget inne, he does not know.		Mesuj, he does not follow.
Mokinget, we do not know.		Mikisuj, we do not follow.
Nenyu mwonget, ye do not know.		Misujusuju, you do not follow.
Menget icek, they do not know.		Mesuj, they do not follow.

In Masai it is not necessary to express the personal pronoun except to avoid ambiguity. Suk, like Masai and Nandi, has ŋ as a sign of the negative, but Turkana has nye.

It does not appear to me that these languages—Masai, Nandi-Lumbwa, Suk and Turkana—have any clear kinship with Somali and Galla. The coincidences in vocabulary seem explicable as loan words. The grammatical system of all is compatible with the view, if it can be supported by other arguments, that all can be traced back to one stock, that is to say, none of the languages show an essentially different method of forming words and constructing sentences, as does, for instance, the Bantu group. But the similarity consists in the absence of striking differences rather than in points of positive agreement. It may be noted, however, that Somali has an article; that the negative is *ma*; that there are some resemblances with Masai in both the personal and possessive pronouns, and that those verbs which take prefixes offer a general resemblance to the corresponding Masai formations (Somali: *a-qan*, *ta-qan*, *ya-qan*, *na-qan*, *ta-qan-in*, *ya-qan-in*, I know, you know, &c., compare Masai *a-suj*, *i-suj*, *e-suj*, *ki-suj*, *i-sujusuju*, *e-suj*).

It may be of interest as throwing light on the relationships of East African languages to give the numerals of those which have been mentioned, as well as of Ja-luo, Acholi, and Madi. 197 802

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

This list of numbers suggests the following reflections among others: (*a*) Madi is quite different from the other languages, and gives the impression more than Somali of belonging to a different group. (*b*) Somali has lent numbers to Masai, Latuka, Nandi, Turkana, and Suk, but is otherwise distinct. (*c*) The remaining languages had originally separate numerals only up to 5. The higher numerals are expressed in Nandi and Masai by borrowed words or new formations, in the others by compounds which more or less clearly mean 5+1, 5+2, &c. It is remarkable that both in Bari and Dinka, as well as Ja-luo and Acholi, though they do not otherwise correspond in details, 7 and 9 are clearly 5+2 and 5+4, but 8 is not so plainly 5+3. (*d*) The numerals up to 5 show a fair correspondence. 4 is practically the same in all languages, and so is 2, except in Nandi and Suk, where it is replaced by a word which may possibly mean 'pair,' just as *juz* is commonly used for 2 in Arabic dialects. For 5 there are at least two words: *mut* and *imyet* in Nandi and Masai; *kanat* and *ekan* in Bari. Suk uses both. Possibly *wdeds* in Dinka and *abity'* in Ja-luo represent variations of the first root, as may also the *Bu* in the Bari numerals from 6 to 9. 1 shows great variety, which may perhaps be paralleled in other families of languages, for instance, Aryan; but it is strange that there should be so little agreement as to 3. Masai and Turkana use *uni*, Nandi and Suk *somok*. *Jala* in Bari stands alone. Dinka, Ja-luo, and Acholi use some word like *dek*, which perhaps reappears in the Bari for 8, *budök* (=5+3). The general conclusion to be drawn is that all these languages (except of course Somali and Madi), while forming closer sub-groups among themselves, belong to a common stock, and that the nearest relation of Masai is Latuka, though they have been separated long enough for each to develop special features.

Mr. Hollis's book will appeal chiefly to the scientific world, and perhaps is, with the exception of Sir Harry Johnston and Krapf's works, the most valuable contribution which has yet been made to the anthropology and philology of the British possessions in East Africa. But it will also have, if used as it should be, a very great practical value. Experience gained in many parts of the world has impressed on me the obvious but much neglected truth that if one wishes to be on friendly terms with other races and to avoid misunderstandings, the first essential is to speak their language. There can be no doubt that in East Africa, as elsewhere, natives are delighted

Onom *or* 'N-domoni 'myet		Fifty.
Onom oo tomon *or* 'N-domoni 'lle		Sixty[5].
Onom oo tigitām *or* 'N-domoni naapishana		Seventy.
Onom oo 'n-domoni uni *or* 'N-domoni 'syet		Eighty.
Onom o artam *or* 'N-domoni naudo		Ninety.

[1] 1 when used with e-wāji, the place, is nēbo.

[2] The ' is sometimes omitted when these words follow a vowel.

[3] Enderoj is occasionally used for nine.

[4] When two numerals are joined by the conjunction *and*, the double o of the plural is only pronounced if followed by a consonant.

[5] Often everything above fifty is simply styled ip. If it is desired to express a very large number, ip-ip, one thousand, *or* le-me-lkan-ayu, countless, are used.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

*193
802

Masculine.	Feminine.	English.
	Ip	Hundred.
	Ip o ōbo	One hundred and one.
	Ip o onom	One hundred and fifty.
	Ip onom	Five hundred.
	Ip-Ip *or* 'N-domoni ip	One thousand.
	Ip-Ip kata-'myet	Five thousand.

With the exception of 1, the number always follows the substantive:

Il-tuñganak aare, two men.

When 1 is placed before the substantive, the article is omitted; when it follows, the article is retained:

Ōbo-tuñgani *or* Ol-tuñgani ōbo, one man.
Nabo-oloñg *or* Eng-oloñg nabo, one day.

The ordinal numbers are expressed by the use of the genitive particle with or without the article:

Ol-tuñgani li-ooñgwan, the fourth man.
Eng-aji e-oñgwan, the fourth hut.
Tapala 'l-tuñganak aare, toriku ol-li-ōkuni (leave two men alone, bring the third), bring the third man.

First and *last* can both be expressed by Ol-le-bata, the-of-side. *First* is, however, more usually translated by one of the following:

Ol-le-lughunya, the-of-head.
Ol-o-ituruk, the-who-precedes.
Ol-ō-lus-oo, the-who-passes-by.

Last is translated by Ol-le-kurum, the-of-behind, *or* Ol-o-iñgopu, the-who-is-behind.

Once, Twice, &c., are denoted by the use of en-gata, the time:

Nabo-kata [1], once, the first time.
Kat'-are, twice.
'N-gataitin are, the second time.
'N-gataitin aja? how many times?
'N-gataitin kumok, often.

First of all is translated by a-ñgas a-iter, to commence to begin, or simply by a-ñgas, to commence:

I-ñgas a-iter en-gias, pe ilo, } you must first of all do the work,
I-ñgas en-gias, pe ilo, } then you may go.

● 802 The Masai have various finger signs to denote the numerals.

1. The first finger of the right hand is held up and the rest of the fist closed. The hand must be kept still.

[1] The first time can also be rendered by eng-aiter.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

802

2. The outstretched first and second fingers are rubbed rapidly one against the other.

3. The first finger is rested on the thumb and the first joint of the middle finger is placed against the side of the middle joint of the first finger, the other two fingers remaining closed.

4. The fingers are outstretched, the first and middle ones being crossed.

5. The fist is closed with the thumb placed between the first and second fingers.

6. The nail of one of the fingers—generally the ring finger—is clicked three or four times by the thumb nail.

7. The tip of the thumb is rubbed rapidly against the tip of one of the fingers, generally the middle finger, the hand remaining open.

8. The hand is opened and the fingers are either all pressed together or all kept apart. A rapid movement with the hand in this position is then performed, first in a downward and then in an upward direction. This movement is made by the hand only, the wrist acting as lever.

9. The first finger is bent so that the tip touches the tip of the thumb, the other fingers being at the same time opened.

10. The closed fist is thrown out and opened, the nail of the middle finger being at the same time clicked against the tip of the thumb.

20. The open fist is closed and opened two or three times.

30. The fingers are placed in the same position as when representing 1, i. e. the first finger is held up while the rest of the hand is closed. When in this position the hand is shaken slightly from the wrist.

40. The hand is opened, and the first and middle fingers are pressed together, as are also the ring and little fingers, a gap thus existing between the middle and ring fingers. When in this position the hand is shaken.

50. The tip of the thumb is placed between the ends of the first and middle fingers. The other fingers can be opened or closed at the same time.

60. For ip, that is to say anything above fifty, the closed fist is jerked out from the body, the fingers being at the same time opened.

114 and their imageless worship of God ("they have definite prayers
776 and they petition the deity more frequently and fervently than
782 the surrounding tribes are known to do" /cited in English/), stand
113 unquestionably, just as generally a comparison of the book by Hollis, appearing shortly after Merker's book, with Merker's Masai is the best apologia for the reliability of Merker's ethnological as well as linguistic observations.

114 Another outstanding African scholar, the praiseworthy, well-
174 known linguist Carl Meinhof of Berlin (now Hamburg), has above all, and, to be sure, for linguistic reasons, turned against Merker's designation of the Masai as a "Semite people," and with that then also at the same time against their onetime ancestral home in Arabia (2).

[113] 2. Cf. his review in Zeitschr. f. Ethnol., 36, 1904, pp. 735-744.

But what the Arabist Schwally (in Giessen) said about the Masai traditions (Archiv für Rel.-Gesch., IX, 1906, p. 505), that here "features of Semitic origin are well grafted on African ones" (but "when and under what circumstances is hard to say"), also applies to the language, as I was able to convince myself by a thorough study of Hollis' book. Definite remains show that the Masai must once have been Semites, and, to be sure, Arabian Semites. This will be briefly discussed in what follows next.

174 Not only does their own tradition teach that they came from
197 the north, but this is also confirmed by a comparison of some of
[173] their number words with those /xv/ of the Cushitic languages
(especially Somali and Galla) and of Nuba. One should compare
[113] the following lists, to which I have also further added the number
[802] words of Nandi, closely related to the Masai, from the new book by Hollis (The Nandi, their language and folklore, with Introduction by C. Eliot, Oxford, 1909):

M 174 197 802 S 197 802

/xv cont./

	Galla	Somali	Masai	Nandi	
1	toko	kan	obo		1
2	lama	laba	are	neng	2
4	afur	afar	ongwan	angwan	4
6	dya	lih	illi	le	6
7	torb	tadoba		trxnab	7
8	sadet	sidet	isyet	sisi	8
9	sagal	sagal	anderoit,sal	sokol	9
10		toben	tomon	tuman	10
20	digotam	lobatan	ligitam	lipton	20
30	sadama	sadan	eson	sasom	30
40	afurtam	afartan	ariam	ariam	40
50		lamtan	emom	lamom	50
100		boghol	ip	pokol	60, 100

M 193 174 197 S 193 197

In the purely Semitic syntax, too, the Masai language is in very close harmony with the Galla and Somali, whereas in this respect the other Cushitic languages (cf. on this point my Grundriss der Geographie und Geschichte des alten Orients /Outline of the Geography and History of the Ancient Orient/, pp. 154 f.) show far more Nuba influence. The pure Semitic substratum of the so-called pattern of the imperfect /Imperfektschemas/ can also be clearly shown as lying at the root of the entire Masai conjugation; one should compare:

M 193 197 174

1. sing. *e-sudsch*, I follow — pl. *ki-sudsch*, we follow
2. sing. *i-sudsch*, you follow — *i-sudsche-sudsche*, you follow
3. sing. *e-sudsch*, he follows — *e-sudsch*, they follow

where, in accordance with a phonetic change to be observed elsewhere in Masai, ti is reduced to i and ki has arisen from ni, so that we may therefore presume as the oldest forms

S [193]

1. sing. *e-sudsch*	cf.	Somali	*eqan*, I know	
2. sing. *ti-sudsch*	"	"	*ta-qan*, etc.	
3. sing. *je-sudsch*	"	"	*ya-qan*	
1. pl. *ni-sudsch*	"	"	*na-qan*

3. pl. *je-sudschk*	"	"	*ya-qanen*	

/15 cont./

D 197 the El asiti also have their own idiom, which will be briefly discussed at a later place.

M 197 802 184 D 197 802 D M 771 304 619 [197] D M 174 [844] [876] D M 614 613 D M 128

Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Asá and El asiti have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tatoga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the Laiser, the El mulelyan, and the El meṅgana, each of which is made up of a number of lineages, and every Asá, as well as every Ol kuafi and Ol massani, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire people; the stressing of individual differences that have developed among the Wandorōbo in the course of time and under the influence of changed conditions will be reserved for the third part.

/16/

Second Part

I.

000 Tribes, lineages, sublineages. -- The Eṅ gidoṅ lineage. -- The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, foods. -- The sorcerers. -- The El kiborōn lineage. -- The rainmakers.

M 614 613

Every tribe (eṅ gischomi) is divided, as has already been mentioned, into a number of lineages (ol gelata, el gelat). Among these, in turn, one distinguishes principal lineages (ol gelata kitok)

/36 cont./

524 Now the partner starts in the same way playing in his row, /37/ to let the other play again as soon as he has placed a last stone in an empty compartment. The one who places a last stone in an empty compartment of his own row takes it and the ones lying in the adjacent compartment of the opponent's row for himself, and so on until, according to the rules, no more stones can be taken out of play. The one who has removed the most stones has won the match and gives himself a point. Serving as counters [802] [237] are small, finger-thick, and spindle-shaped ivory sticks 15-20 centimeters long (ol alai, el ala) (1).

1. As tooth generally is called tusk of the elephant, ivory.

Before the game starts, there is an understanding as to how many points are to be played. Women never play this game, warriors rarely. The latter usually prefer the en gehé ('n gehén), which is played in much the same way, except that in any case about eight players for each side take turns and each row has 40 to 50 compartments, which are not chiseled into a board, but are scratched into the ground.

/124 cont./

151 proved by the fact that they prepare the ground plan of the huts, the
[804] wire spirals and wire rings serving for adornment, etc., without mechanical measuring devices. For the same reason one recognizes their sense of symmetry in their weapons.

151 Following the Holmgren zephyr-yarn procedures, I examined 87
125 Masai, and, to be sure, 46 men and 41 women, on their sense of color. The test showed that of all only one man had "weak color sense," all the others, on the other hand, had "normal color sense."
[822] Here too the symbolic significance of the colors should be considered: black = calm seriousness, red (blood) = war, green = peace, variegated, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly, those of persons known by them not at once, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them; they regarded such a one as incomplete.

153 Their powers of orientation in the region and their memory for
151 paths once taken or stretches of land traversed are excellent. Their
153 memory for numbers seems to be better than that of most tribes in the
• 802 interior of East Africa, since, unlike the latter, they do not use
[211] mechanical aids such as notches in sticks, knots in string, etc. Their power of conceiving numbers does not seem to go beyond five; only a few could recognize at a glance the correct number of more than five objects placed before them.

53 Their feeling for plastic art is shown by the rich and not unhand-
517 so[illegible] adornment, the handsome forms of their weapons, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking; their singing is arbitrary and without rules, the main thing in it is the text and the alternation in the vocal execution. They do not have musical instruments, for the antelope horn of the summoner to legal proceedings serves only to attract the attention of the people through loud noises. The following is a
533 common song to accompany the dance (1):

1. Recorded by Herr Stabsarzt /staff physician/ Dr. Skrodzki.

2. Obsolete word bischăn = seven.

of the index finger lightly rubs on the lower part of the nail joint of the thumb.

8 = isiĕt. The opened hand with thumb lying on top is shaken up and down several times at the wrist. /See 9 in Fig. 73./

9 = ĕndŏrŏd (3) or nâudo. After one has formed a ring with

3. Obsolete word sāl = nine.

thumb and forefinger and slightly extended the other fingers, there is trembling with the whole hand. /See 8 in Fig. 73./

10 = tŏmŏn. From the sign for nine the index finger is jerked forward with a simultaneous thrusting forward of the hand.

/155/

11 = tŏmŏn-ŏbō. Sign for ten and then sign for one.
12 = tŏmŏn-ārĕ. " " " " " " " two.
13 = tŏmŏn-ogŭni. " " " " " " " three.
14 = tŏmŏn-uṅgwan. " " " " " " " four.
15 = tŏmŏn-oimiĕt. " " " " " " " five.
16 = tŏmŏn-oille. " " " " " " " six.
17 = tŏmŏn-obischana. " " " " " " " seven.
18 = tŏmŏn-oisiĕt. " " " " " " " eight.
19 = tŏmŏn-ĕndŏrŏd. " " " " " " " nine.
20 = digităm. The right hand is opened and closed twice.
30 = ŏssŏm. The same sign as for one, only here there is trembling with the whole hand, as in threatening.

/155 cont./

802 40 = ǎrtǎm. The opened hand with thumb lying on top is moved tremblingly.

50 = ǒnǒm. Similar to the sign used for five, but one does not put the fingers tightly together for a fist, but only just so far back that the tip of the thumb can be put between index finger and middle finger, and then trembles with the entire hand.

60 = Ib (1). The right fist is thrust forward, whereby the extended fingers are spread apart.

1. Obsolete word naisuari = 60.

In the number system of the Masai ib is the next unit after 10, corresponding to the 100 of the decimal system. Moreover, ib is the largest unit and in practice in daily life really the end of the series of numbers. Beyond 60 the system is continued by addition always to the next multiple of 60. Thus it is said 80 = 60 + 20 = ib digitam, and 150 = 60 X 2 + 30 = ib kat aré ossom. Ib also often has the meaning of an uncounted, larger amount. The larger it appears, the more frequently is the word ib with the hand sign used for it repeated, usually with the addition of merta essiana = it is not to be counted, for example, ib ib ib merta essiana.

803 Tests in reckoning showed that the objects presented could be added up correctly. Subtraction was successful only by removing the required number and counting the rest again. Division and multiplication were entirely unknown.

802 For the addition and likewise when teaching children to count, counting was done on the fingers, whereby the number words were pronounced aloud. For /156/ counting off, one first holds the right hand open and with the palm turned upward. Then one puts the fingers of the left hand under the back of the right hand and, with the free, left thumb, presses the fingers of the right hand, one

/156 cont./

• 802 after the other, from the little finger to the thumb, into the palm of the hand. While one then further counts in like manner on the fingers of the left hand, those of the right one remain closed and only its thumb is moved freely. After turning down the thumb of the left hand, the one counting raises both hands, now closed into fists, and says: tomon (= 10). For counting further, one begins anew in the same way and does not continue, say, on the toes.

[801] [171] The Masai count neither human beings nor cattle. It is believed, as the Israelites also did, according to 1st Chron. 21, that the ones counted would die. Thus, they correctly estimate larger multitudes of living creatures in round numbers, and small ones with quite great certainty. Only dead persons, for example, the fallen warriors, are counted individually.

192 826 [754] The names of the fingers might be mentioned here: thumb = ol moruo kitok, that is, the big old one. Index finger = os sogutihoi or ol osokutoni, that is, the sorcerer; if one wants to make someone ill through sorcery, one spreads the magic medicine under the nail of the index finger and, murmuring a curse, one points with it at the person concerned. Middle finger = ol gerĕti, that is, actually the strip of skin worn ringlike on the middle finger. Fourth finger = ńgoto eń genenja, that is, mother of the little finger, which is called eń ginjenje or also eńg ilinda.

802 Ordinals: ol oiturugu = the first /masc./, ol iaré = the second /masc./, ol ioguni = the third /masc./; eń aiturugu = the first /fem./, eń iaré = the second /fem./, eń ĕuni = the third /fem./. The /masc./ (the /fem./) (general), ol (eń) abaye; the last in the meaning of the rearmost is called ol abaye ta gorom; the one standing on the right end of a row (to the right of the one judging) is called ol abaye t' eń gaina ertatenne (eń gaina = the hand, ertatenne = on the right). the one standing on the other end, ol abaye t' eń gaina ekediĕnje (ekediĕnje = on the left).

Once is called nabo kata (or nabo gadá); twice, kat' aré; three times, kat' uni, etc.

/156 cont./

• 802 192 As for fractional parts, the Masai have a special word only for a half, e matua, which at the same time also means half, for example, e matua eñ geteñ = half a cow. One designates parts that are smaller than the half of a whole with en duñoti, which, like os sadjati, means roughly "a piece, a strip of it." These pieces are distinguished according to their size: a large piece = eñ duñoti kitok, and a small piece = eñ duñoti kete. These words are probably only used in dividing up slaughtered livestock, since there is scarcely any other practical need for their use. En dunoti is used when the whole is divided crosswise; os sadjati, when it is divided lengthwise. With the help of these designations and the number words /157/ one forms fractions in the following manner: en duñoti uni (or es sadjati uni) means that the whole was divided into three parts; en duñoti uni n' aia (a contraction of nanu aia) aré eti nabo = the whole is divided into three parts, I take away two, that leaves one = 1/3.

805 The time of day is estimated according to the position of the sun, more rarely by the length of the shadows. The following times of day are distinguished:

Four o'clock in the morning: erton eto egénjwa = not yet "early."

Five o'clock in the morning: egénjwa = early.

Somewhat later is: eñ gagenja = the rosy morning sky.

Break of day, about half past five: elagua eñg oloñ = the sun is (still) distant.

Sunrise: etubúguo eñg oloñ = the sun appears a little, or elebwa eñg oloñ = the sun is coming up.

The time from eight to ten o'clock in the forenoon is called erton atad egénjwa = still early yet.

Around eleven o'clock in the forenoon, one says: eto nito ebir' eñg oloñ = the sun does not yet stand straight overhead.

Twelve o'clock noon: ebira eñg oloñ = the sun stands straight overhead.

/155 cont./

802 40 = ärtäm. The opened hand with thumb lying on top is moved tremblingly.

50 = ŏnŏm. Similar to the sign used for five, but one does not put the fingers tightly together for a fist, but only just so far back that the tip of the thumb can be put between index finger and middle finger, and then trembles with the entire hand.

60 = Ib (1). The right fist is thrust forward,

1. Obsolete word naisuari = 60.

whereby the extended fingers are spread apart.

In the number system of the Masai ib is the next unit after 10, corresponding to the 100 of the decimal system. Moreover, ib is the largest unit and in practice in daily life really the end of the series of numbers. Beyond 60 the system is continued by addition always to the next multiple of 60. Thus it is said 80 = 60 + 20 = ib digitam, and 150 = 60 X 2 + 30 = ib kat aré ossom. Ib also often has the meaning of an uncounted, larger amount. The larger it appears, the more frequently is the word ib with the hand sign used for it repeated, usually with the addition of merta essiana = it is not to be counted, for example, ib ib ib merta essiana.

• 803 Tests in reckoning showed that the objects presented could be added up correctly. Subtraction was successful only by removing the required number and counting the rest again. Division and multiplication were entirely unknown.

802 For the addition and likewise when teaching children to count, counting was done on the fingers, whereby the number words were pronounced aloud. Ill. 5. Kraal on the steppe between Kilimandscharo and Meruberg.

342 out of material available everywhere. Like every task in the
[462] kraal, hut construction is the duty of the women. After the site
for the individual hut (Fig. 3) is cleared of grass and brush and
then leveled, the spiral-oval ground plan is undertaken in that
[304] the woman scratches it on the ground with her foot. They do not
use any auxiliary means for measuring it: measuring by eye is
sufficient for the woman who, even as a child, helped her mother
342 with this work. Into the ground plan, at foot-long intervals, poles
335 (ol ômi, el ôm) about 1 1/2 meters long are stuck in the ground
and joined lattice-like with thumb-thick cane-switches (ol gere i,
el gereen). Then in the longitudinal diagonal seven to eight
supports (em bogiehi) are dug in, over which a longitudinal bar
(ol ereshena, el ereshenan) is put from one end of the hut to the
[284] other. Over this the poles are arched and the opposite ends lashed
[324] together with papyrus grass (en endja). By interplaiting finger-
thick switches (en jaehui, o jaehu) walls /34/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters
[237] high, 4 to 5 meters long and 3 meters wide. Neats' skins served
[731] principally for roofing before the rinderpest raged among the
[324] livestock around the year 1890. Now, /Figs. 2 and 3 appear here/
[237] when the Masai herds have become vanishing small in contrast
to former times, the switch framework is first packed with a
layer of dry, long-bladed grass (ol endjeda or ol endjeda) 15 to

/123 cont./

201 152 A threatening with blows, just like the energy of a blow is indicated with a smacking sound that the index finger snapping down on closed thumb and middle finger of the right hand produces, a movement that is executed from the wrist and to a lesser extent also from the elbow and is sometimes observed among us as an involuntary reaction after taking hold of an unpleasantly hot object, or also among snuffers after taking a pinch. Besides this gesture one also finds another, the snapping of the middle finger from the tip of the thumb on the ball of it, common among us. Often this expresses a higher degree of threat, a threatening with weapons. On the other hand, however, one also finds it as an expression of embarrassment, whereby at the same time the shoulders are drawn up.

If the Masai wishes to emphasize emphatically that something is altogether at an end or gone, that nothing is left of it any more, he runs his thumbnail directly behind the edge of his upper incisors and pushes it quickly forward with a snapping sound.

201 861 I observed repeatedly how mothers reprimanded their naughty children, in that they accompany their eno el aigoschobo eh abiak, that is, go, or things will go badly with you! with a motion of the hands, which consisted of her rapidly passing the palms of her hands, turned toward each other, half clapping, half grasping, and, to be sure, the right hand, chiefly active in this, would be snapped forward from behind.

151 /124/ The strength of vision of the Masai, like that of other primitive peoples, is very good. Often they already saw objects in the landscape at distances at which a normal-sighted European could not yet discern anything. The author was particularly struck by the fact that the people were able to recognize an object seen at great distances better than the European, even such whose eyes, through many years' residence in the country, were accustomed to the peculiar forms of vegetation and lighting effects in the steppe. When the latter was in doubt as to whether it was a matter of, for example, a man or a tree stump, or of a termite hill or a large antelope, the Masai's power of recognition always proceeds to be the better one. [904] That they have at their disposal a tolerable judgment of distance is

/124 cont./

151 proved by the fact that they prepare the ground plan of the huts, the
[804] wire spirals and wire rings serving for adornment, etc., without mechanical measuring devices. For the same reason one recognizes their sense of symmetry in their weapons.

151 Following the Holmgren zephyr-yarn procedures, I examined 87
125 Masai, and, to be sure, 46 men and 41 women, on their sense of color. The test showed that of all only one man had "weak color sense," all the others, on the other hand, had "normal color sense."
[822] Here too the symbolic significance of the colors should be considered: black = calm seriousness, red (blood) = war, green = peace, variegated, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly, those of persons known by them not at once, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them: they regarded such a one as incomplete.

153 Their powers of orientation in the region and their memory for
151 paths once taken or stretches of land traversed are excellent. Their
153 memory for numbers seems to be better than that of most tribes in the
802 interior of East Africa, since, unlike the latter, they do not use
[211] mechanical aids such as notches in sticks, knots in string, etc. Their power of conceiving numbers does not seem to go beyond five: only a few could recognize at a glance the correct number of more than five objects placed before them.

53 Their feeling for plastic art is shown by the rich and not unhand-
617 some adornment, the handsome forms of their weapons, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking: their singing is arbitrary and without rules, the main thing in it is the text and the alternation in the vocal execution. They do not have musical instruments, for the antelope horn of the summoner to legal proceedings serves only to attract the attention of the people through loud noises. The following is a
533 common song to accompany the dance (1):

1. Recorded by Herr Stabsarzt /staff physician/ Dr. Skrodzki.

/160 cont./

805 [171]

/footnote 2 continued/ in Egypt, as the so-called Palermo stone has shown (Vorderasiat. Gesellsch. Geschft. Mitt., 1905. II.)

Proceeding from the present year, one also designates, with the help of yesterday and tomorrow, etc., the next years in the past and future: ol arí le ńgolé otolossoje (ol ari = the year, ńgole = yesterday, otolossoje = /161/ elapsed), last year; ol ari l eńg aioloń otolossoje, the year before last; ol ari l oguni otolossoje, the last year but two. Furthermore ol ari taisere olotu (taisere, tomorrow, olotu = future), the next year; ol ari l eńg aioloń olotu, the year after next; ol ari l eńg aioloń edía matua olotu or, more briefly, ol ari l oguni olotu, the third year coming, etc. One very seldom hears designations going beyond the last and next year.

804 The only measure peculiar to the Masai is the hand span (en demata), measured, with outspread fingers, from the tip of the thumb to that of the middle finger. I saw only that the people measured with this the length of the spear blade, spear shoe, and sword blade, and heard how, upon ordering the parts named, they designated with so-and-so many hand spans the desired length to the smith.

XVIII.

000 Livestock. -- Cattle. -- Care. -- Castration. -- Donkeys. -- Goats. -- Sheep. -- Camels. -- Names for cows. -- Ownership marks. -- Brand scars for beautification and originating from the treatment of sickness. -- Cauterizing the horn attachments. -- Birth assistance. -- Sicknesses and their treatment. -- Cowbells. -- Tending the livestock. -- Drawing blood. -- Slaughter. -- Cutting up the animal and distributing the meat. -- Nomenclature of the livestock. -- Pasture in the steppe. -- Stockbreeding by the European settler. -- Useful and harmful fodder plants.

233 The Masai's greatest joy is the ownership of as much livestock as possible; all his thoughts and acts are directed toward preserving and enlarging the herds. The cattle are zebus (Bos indicus), among

The Masai reckon time by 'ages' or periods of about seven and a half years. The following account of the Masai ages is given in the words of the Masai themselves. 561 [805]

Eata 'l-Maasae 'l-porori lenye.

Memurati 'n-gera te-'wēji nēbo. Edufig áitaa 'l-porori, metushuli áitaa ol-poror ōbo, amu merisyoro pōkin; emurati 'l-kituak, nepali 'l-ooti metubulu.

Ore lekwa kituak ooiteraki samurat nēji e-murata e-tatēne,

The Masai have what they call ages. 561 539

Children are not all circumcised together: they are divided up into ages, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (i.e. until they reach the age of puberty). [881]

Now, those who are circumcised first belong to what is called the

[1] Owing to cattle plague, disease, and civil wars, the Masai occupying the Uasin-gīshu and Aikipyak districts have practically ceased to exist. The remnants have been scattered and mixed with other tribes.

FL12 Masai FL12

561 539 naa ol-poror ōbo illo. Netoni 'l-ooti. Ore pe ebulu, nemurati ai ninje, nejiñg illo-poror.

Ore 'l-ooitōkīni aamurat te-kurum, naa likae-poror illo, nēji ninye e-murata e-kedyanye. Netoni sii 'l-ooti, nemurati si ninje, nejiñg illo-poror.

Ore 'l-porori aare ēji ol-aji ōbo.

Ore ti-atwa ol-poror ōbo nēoriori kat'-uni: etii ''L-chañgen-ōpir,' netii ''L-tareto,' netii ''L-paringōtwa lañg.'

right-hand circumcision, and that is one age. The younger ones wait and are circumcised later. They also become members of this age.

When the next circumcision festivals are held, those circumcised belong to what is called the left-hand circumcision, and that is the next age. The younger ones wait as before, and when they are circumcised they likewise join this age.

Now, two ages are considered equivalent to one generation.

Each age has three divisions, first, those known as 'The big ostrich feathers,' secondly, those called 'The helpers,' and thirdly, those known as 'Our fleet runners[1].'

561 ● 805 Il-porori loo-'l-Maasae oodamuni taata. — Masai ages which are now remembered.

E-murata e-tatene (Right-hand circumcision).	E-murata e-kedyanye (Left-hand circumcision).	Approximate data.
Il-Kinyōyo		
	Il-Tapari	1791 1799 } one generation.
Il-Kigiriyo		
	Il-Kisalie (the people of the plain)	1806 1814 } one generation.
Il-Kupai (the white swords)		
	Il-Kimirisho (those who drive away)	1821 1829 } one generation.

561 881 [1] When permission has been granted to hold the circumcision festivals (*vide* p. 296), one feast is held in each sub-district every year for four years in succession, and all those circumcised during these four years belong to the right-hand circumcision. An interval of about three and a half years then intervenes before another festival is held. All youths circumcised during the next four years belong to the left-hand circumcision. As an instance, a man born in 1872 would either belong to 'Our fleet runners' of the Il-Ñgarbut age or to 'The big ostrich feathers' of the Il-Kipōni age, i.e. he was circumcised in 1885 or 1889. Boys as a rule are circumcised when they are between thirteen and seventeen years old. Orphans and the children of poor parents frequently wait until they are twenty.

portant elders, and take a cow which has a calf, and a woman who has a baby; and the enemy do the same.

They then meet together at a certain spot, everybody present holding grass in his right hand, and exchange the cattle, the Masai taking the enemy's cow and the enemy the Masais'. The enemy's child is suckled at the breast of the Masai woman, and the Masai baby at the breast of the woman belonging to the enemy.

After this they return to their kraals, knowing that a solemn peace has been entered into.

Thus was peace restored between the Lumbwa Masai and the Masai proper[1], in the year of the sun[2], at the place called the Ford of Sangaruna[3].

Formerly when the Masai did not wish to make a solemn peace with the savages, they entered into blood brotherhood with them.

A Masai elder would sit down with one of the elders of the savages; each of them would then cut his left arm, and after dipping in the blood some meat of a bullock which was killed on the spot, would eat it.

When they had finished, the Masai went away, but they did not keep the peace.

[113] [1] Hobley (*Eastern Uganda*, p. 42) and Johnston (*The Uganda Protectorate*, p. 884) describe a similar ceremony after a war between the Masai and the Lumbwa or Kip-sikisi.

The divisions of the day[1].

The Masai have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (6 p.m.).

There is also the time called Nightfall, or the hour for gossip (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the buffaloes go to drink—this latter is the hour before the sun rises, (which the Swahili call *Saa kumi* (4 a.m.).

There is also the time called The blood-red period *or* When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (6 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands *or* is opposite to one (mid-day), The shadows lower themselves (1–2 p.m.), and Afternoon.

[171] [1] The Dinka divide their day in much the same manner as the Masai (Kaufmann, *Schilderungen*, p. 131).

'N-gataïtin oo 'l-apaïtin.	Seasons and months.
Etii 'n-gataïtin oñgwan oo 'l-apaïtin tomon o aare.	There are four seasons and twelve months [1].
'L-apaïtin lo-'l-oirujuruj:	The months of showers:
1. Kara-ōbo. Ninye ol-le-'n-gidipata e-'ng-aï oo-'n-Gokwa, o ol-oiter ol-ari.	1. June. This is the month after the rain of the Pleiades, and the first month of the year.
2. Kipern. Eiperno 'ñgorō-yok aajo meata 'n-gīshu kulle.	2. July. The women wrangle and squabble because the cows give but little milk.
3. L'-iarat. Etōito 'n-gujit, etaa 'iarat ake ooata 'n-gujit naanyori.	3. August. The grass having become dry, food for the cattle is only found in the valleys.
'L-apaïtin lo-'l-amēyu:	The months of hunger:
1. Pushuke. Ninye eitapukye 'l-käk, áibuñgu 'n-dapuka.	1. September. The trees flower in this month.
2. 'N-duñgus. Ninye oñgusurari aishunye pe esha eng-aï o-'l-tumurel.	2. October. This is the last month of hunger. When it is finished the lesser rains may be expected.
3. Ol-oiborare. Eibor ingatambo.	3. November. The clouds become white.
'L-apaïtin lo-'l-tumurel:	The months of the lesser rains:
1. Ol-gisan. Ninye ol-le-'m-bolos lo-'l-tumurel, nemeshaiki 'wējitin pôkin eitau 'l-orighaishi anaa 'l-kesen.	1. December. This is the month when the lesser rains fall in showers and the ground looks like stools or cloths for carrying children in.
2. Ol-ōdalu. Ninye edalunye eng-oloñg, eidipa ataaha eng-aï o-'l-tumurel.	2. January. The sun comes out again, and the lesser rains stop.
3. Loo-'n-gushu. Ninye olle-'n-gidipata e-'ng-aï o-'l-tumurel, nesuji 'n-gīshu 'n-daritik naaji 'n-gushu.	3. February. This is the last month of the lesser rains, when flocks of small birds (Buphaga?) follow the cattle.

[1] The Dinka have two seasons and twelve months (Kaufmann, *Schilderungen*, p. 131).

[171]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

805 821 'L-apaïtin le-'l-leñgon:

1. Kuj-orok. Ninye eshaiye eng-aï oo-'n-Gokwa, neroku keper too-'ng-atambo, neata e-rukenya, nēji kuju.

2. Ōäni - oiñgok. Ninye epushunye 'l-oiñgok, nēäni ti-añg meimin.

3. Loo-'n-Gokwa. Ninye edōyórie 'n-Gokwa.

Ore ten eidipayu ol-apa loo-'n-Gokwa, pe esha eng-aï naleñg, nějo 'l-Maasae: 'Etorikīne 'yook, elle-apa Loo-'n-Gokwa.' Naa, ten ēosh eng-oloñg, p' eidipayu ol-apa ōji ol-oiborare, nějo sii: 'Etorikīne 'yook, elle-apa Ol-oiborare.'

The months of plenty:

1. March. This is the month when the rains of the Pleiades commence. The clouds become black, and heavy mists hang about.

2. April. The bulls have to be tied up in the kraals to prevent their being lost.

3. May. The Pleiades set in this month.

Should the rains still continue at the beginning of June, the Masai say: 'We have forgotten, this is May;' and should the hot season not be over at the commencement of December, they say: 'We have forgotten, this is November[1].'

827 'N-alimen, o en-giōget o en-dasing, oo 'mweiyani.

Ten enya 'l-tuñganak oo-'l-Maasae 'n-alimen, nēji eata 'n-jo. Naa, ten enya en-gerai kiti, neibuñg ñgotonye too-'l-kimōjik en-gutuk enye, amu ōure mebaari aaku kitok anaa 'l-meek.

[856]

Ore ten eata 'l-tuñganak en-giōget, nēji einos in-giri.

Ten ēasing ol-tuñgani, nějo openy: 'Ol-tuñgani láipoto.' Nějo kulikae-tuñganak ootii: 'Mikitagolo (eng-Aï) el-lughunya,' araki: 'I'risha.'

753 Ten emweiyu 'l-tuñganak

Yawning, hiccoughs, sneezing, and illnesses.

When the Masai yawn, they are said to be sleepy. If a small child yawns, his mother grasps his mouth between her fingers to prevent it from stretching and becoming big like the savages' mouths.

If a person has hiccoughs, it is believed that he will eat some meat.

When a person sneezes, he says to himself: 'Somebody is calling me.' If other people are present, they say to him: 'May God make your head hard,' or: 'Have good health.'

When a Masai falls ill, it is said

[1] The thirteen lunar months of the solar year are doubtless thus accounted for.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

777 It is lucky to see a fish eagle (*ol korpellia*) sitting on a tree if it is facing the observer. It is unlucky to see a single wild pig, but lucky if a number of pigs cross the path from left to right in front of the traveller.

There are several other superstitions, but they seem to be held in little, if any, more importance than most of our own, *e.g.* seeing the new moon through glass, encountering magpies, spitting when a hare crosses one's path, etc.

514 576 *Spitting* is a greeting and brings good luck. One is asked to spit on a new-born baby. I have sometimes been spat on in a similar way by very old men and women—a somewhat trying ordeal which had to be patiently endured. Moreover, a Masai may spit on his palm before shaking hands in order to give an exceptionally warm greeting. It is then etiquette to follow his example.

173 *History.*—The Masai have little historical tradition. Some of it is given in Hollis, pp. 266–273. They are said to have come from a place in the North called by them *Endigir* a hundred generations (of 15 years each) ago. The generation names from the present time, working backwards as far as they are remembered, are:—*Il Tuati*, *Il Talala*, *'L Aimer*, *Il Nyangusi*, *Il Tuati*, *Il Kidotu*, *I Merishare*, *Il Tiegi*, *Il Salaash*, and *Il Meshopo*. Those before this have been forgotten. When they left Endigir there were no *Laibons*, so the elders arranged about the ceremonies. The warrior and age-group system was already in being, having been instituted by Naiteru Kop (*see* Hollis, p. 266). The customs of group marriage and of free love between the warriors and the girls were also in existence.

There were four tribes in Endigir—the Masai, the Dorobo, the Kikuyu and the Il Kunono (smiths). God gave the cattle to the Masai and the wild beasts to the Dorobo. He told the Kikuyu to go to the mountains and the place of many rivers and to eat grass. He gave iron to the smiths and provided them with stones to beat it with. These four tribes were all friends together.

262 *Restrictions as to Food.*—Besides those mentioned above as applying to warriors and junior elders, the following apply to all Masai:—

They must not eat the flesh of wild animals.

They must not drink milk soon after eating meat.

Women must not be seen eating meat or drinking milk by men of their husband's generation.

805 *Months and Days.*—The Masai divide the year into the following months:—

Ol Adaalo. Meaning unknown

Or'at = Grass in the hollows. (About February.)

O Ãnyi Oing'ok = When the bulls are tied up.

Ol o Doyoerie ol o Ingokwa = When the Pleiades are in the West.

Ol o Olepunyi Ingokwa = When the Pleiades are in the East.

Ol Guju Orok = The short black bristles. So called because it is the month of ceremonies, and therefore heads are shaved.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

805

Ol Oilokurukur = The Thunderer and 2nd month ditto.
Ol Oirujeruj = Light showers and 2nd month ditto.
Ol Tumuri. Meaning unknown and 2nd ditto.
Ol ol Aibor Ari = The month of the white water

The following are the days of the month :—

1. *Ol Kardet* = Full moon.
2. *Ol Oinyori* = When it rises green.
3. *Ol Onyuki* = When it rises red.
4. *Esobieh Naiturugu* = The beginning of the wane.
5. *Esobieh il Giporoon* = They wane the scars (?).
6. *Esobieh e Nadarhas* = The red wane (?).

The other days are not named. But one may refer to a day as, for example, "the eighth day of the moon," that is, counting from the time when the old moon disappeared. The dark days between old and new moon are called *Enaimin* = the darkness.

FIG. 2.

Hut-building.—The Masai frequently move from one place to another in order to seek the best grazing and water for their cattle. They are therefore constantly deserting old villages and building new ones. If time permits, after the day's march is over and before darkness sets in, each woman sets to work to build a hut, even if it is only to be occupied for one night. 361 342

She first cuts a number of straight sticks about 5 feet long and brings them to the place where she wants to build. She takes six of these sticks and marks out an oblong about 5 feet by 8 feet with them and places little blobs of cow-dung (*Emodio*) round it at 9 inches or 12 inches interval (Text-fig. 2). She then drives a hole in the ground through each blob of cow-dung to a depth of 12 inches or so with a pointed stake called *Enaunir*. The cow-dung lubricates the point of the stake and makes it easier to pierce the ground. The holes slope slightly outwards from bottom to top. She then drives an upright into each hole, after which she binds the tops of the uprights to a pliant wand which runs all round horizontally, leaving every fourth or fifth upright unbound. [237]

/156 cont./

802 192 As for fractional parts, the Masai have a special word only for a half, e matua, which at the same time also means half, for example, e matua eñ geteñ = half a cow. One designates parts that are smaller than the half of a whole with en duñoti, which, like os sadjati, means roughly "a piece, a strip of it." These pieces are distinguished according to their size: a large piece = eñ duñoti kitok, and a small piece = eñ duñoti kete. These words are probably only used in dividing up slaughtered livestock, since there is scarcely any other practical need for their use. En dunoti is used when the whole is divided crosswise; os sadjati, when it is divided lengthwise. With the help of these designations and the number words /157/ one forms fractions in the following manner: en duñoti uni (or es sadjati uni) means that the whole was divided into three parts; en duñoti uni n' aia (a contraction of nanu aia) aré eti nabo = the whole is divided into three parts, I take away two, that leaves one = 1/3.

• 805 The time of day is estimated according to the position of the sun, more rarely by the length of the shadows. The following times of day are distinguished:

Four o'clock in the morning: erton eto egéñjwa = not yet "early."

Five o'clock in the morning: egéñjwa = early.

Somewhat later is: eñ gagenja = the rosy morning sky.

Break of day, about half past five: elagua eñg oloñ = the sun is (still) distant.

Sunrise: etubúguo eñg oloñ = the sun appears a little, or elebwa eñg oloñ = the sun is coming up.

The time from eight to ten o'clock in the forenoon is called erton atad egéñjwa = still early yet.

Around eleven o'clock in the forenoon, one says: eto nito ebir' eñg oloñ = the sun does not yet stand straight overhead.

Twelve o'clock noon: ebira eñgoloñ = the sun stands straight overhead.

/157 cont./

• 805 Afternoon is designated in general with etuschugoti oibi, that is, the shadow is reversed; or tēlba. One also often hears this designation for the time from three to five o'clock in the afternoon. In particular the time from twelve to two is called ete gil eńg oloń = the sun is broken; the time from two to four erta tēlba = now afternoon; that from four to six, emutó = evening. Five o'clock in the afternoon is designated with erta doije eńg oloń = the sun is going down. The time during which the evening glow is still to be seen is called etimirua eńg oloń = the twilight follows the sun.

[513] With darkness setting in, the tárá begins and lasts until about eight o'clock, when one usually goes to rest.

Night is called eń gawarié; midnight, em bolos eń gawarié.

Today is called tǎda or tǎta, tomorrow taisēre or taisēri, yesterday ńgolé; the day before yesterday, as well as the day after tomorrow, is called eń aioloń. *The days reckoned beyond the day* before yesterday in the past and beyond the day after tomorrow in the future are designated as eńg aioloń edia matua, eńg aioloń e ungwan, etc. The latter is the fifth day from today reckoned both [193] in the future and in the past. The tense of the verb shows which of the two is meant.

With the help of these designations the days of the seven-day week (eń giruaha or eń giruascha, pl. eń giruaschat) are named. The names are the following:

First day = tǎda (today).

Second day = taisēre (tomorrow).

Third day = eńg aioloń.

Fourth day = eńg ailoń edia matua (more rarely eńg aioloń e uni).

Fifth day = eńg ailoń e uńgwan.

/158/ Sixth day = eńg aioloń e miēt.

Seventh day = guna l'oń Ile or essubat 'n oloń = the good day (1).

1. In this connection it should be noted that ósubat, fem. éssubat, means "good," "excellent," and uni, ungwan, miēt, Ile are the verbs for three, four, five, and six. H.

/158 cont./

• 805 [821] This week, according to the tradition of the Masai, once in the dim past began on a new-moon day. Since then its succession has run through months and years, without consideration of the moon.

The Masai reckon according to lunar months, which in ordinary life are taken as having 30 days. They differ very essentially from the lunar-month reckoning customary elsewhere in that they do not start with the day of the new moon, but rather this day is already the fouth one in the Masai month. The designations for the days are the following:

1st day: ebor ol aba nabo.
2nd day: ebor ol aba 're.
3rd day: ebor ol aba uní.
4th day: ertaduage duo ol aba, the moon is to be seen; more rarely also ebor ol aba uńgwan.
5th day: ebor ol aba oimiźt.
6th day: ebor el aba oile.
7th day: ebor el aba nabischana.
8th day: ebor ol aba issiźt.
9th day: ebor ol aba endorot.
10th day: ebor ol aba tomon ngera (2).

2. ngera from the verb-ger = to be silent.

11th day: ebor ol aba tomon-obo.
12th day: ebor ol aba tomon-are.
13th day: ebor ol aba tomon-uní (or tomon-oguní).
14th day: ebor ol aba tomon-uńgwan.
15th day: ebor ol aba tomon-oimiźt or ol gadet = the one looking across. The rising full moon looks across at the sun not yet set.
16th day: (ol aba) tomon oile or ol onjóri = the greenish one (3).

3. In addition to this counting, there also runs a second one, which, from the 16th on, counts the days of darkness (en aimen). In this, the 16th day is eschomó nabo en aimen, the 17th eschomo

/158 cont./

• 805 /footnote 3 continued/ 'ní en aimen, etc..
the 30th eschorró tomon-olmíñ en aimen.

17th day: (ol aba) tomon-obischana or ól enjógi = the red one.
18th day: (ol aba) tomon-olmíñ or es sobia naiturógi.
19th day: (ol aba) tomon-endorot or es sobia em beloo.
20th day: (ol aba) digitam naperra or es sobia nabaye or also en ekiborón.
21st day: (ol aba) digitam-obo or e' nge naiturugu.
22nd day: (ol aba) digitam-are or e' nge em beloo.
/159/ 23rd day: (ol aba) digitam-oguni or e' nge nabaye.
24th day: (ol aba) digitam ungwan or en aimen narok = the black darkness.
25th day: (ol aba) digitam-olmíñ or en aimen narok.
26th day: (ol aba) digitam-olle or en aimen narok.
27th day: (ol aba) digitam-obischana or en aimen narok.
Moreover, in a 29-day month, the:
28th day: (ol aba) digitam-olmíñ or eñ gartake ol aba or en aimen narok.
29th day: (ol aba) digitam- endorot or ewake ol aba or endghe en aimen.
In a 30-day month, the:
28th day: (ol aba) digitam olmíñ or en aimen narok.
29th day: (ol aba) digitam-endorot or eñ gartake ol aba or en aimen narok.
30th day: (ol aba) oseom naperra or ewake ol aba or endghe en aimen.

The day designation, however, is now by no means so common that every Masai would be able to determine it precisely on every day. Actually only the following days or groups of days are in more constant daily use:

The 1st day, as ebor ol aba nabo, as the beginning of the counting
(1984) and initial day of the eng ebor ol aba, the light of the moon: on this day no circumcision is undertaken.

The 4th day, as ertadoage duo ol aba, as new moon.

/150 cont./

• 805 The 10th day, as tonon ngeen, as the final day of the first decade.

The 15th day, as ol gadet and final day of the ning ebor ol ebe.

[977] The 16th day, as ol ongel; it is the unlucky day for war and the initial day of en simon (= the darkness).

The 17th day, as ol ongel; it is the most important unlucky day in daily life, but on the other hand, is regarded as a lucky day in war; on the ol ongel people do not change dwellings, do not shave their heads, and do not undertake any circumcision.

[999] [784]

The 18th day to 20th day, as en mbtale.

The 21th day, as en ekibedik, on which the boys belonging to the El kibedik lineage are circumcised, and as the final day of the second decade.

The 21st day to 23rd day, as ngeth.

[784] The 24th day, as initial day of the en simon ngeth; on it no sacrifices may be offered, and frequently too, just as on the subsequent en simon ngeth days, no circumcision is to take place.

The following days up to the end of the month, as en simon ngeth.

Within these days, the 4th, 10th, 17th, 24th, and 1st are again especially familiar.

805 821 132 Three months form a season; four seasons, the year (ol ad). The names of the seasons are

Ol dumerii, that is, the time of little rainfall, which precedes the great rainy season. This falls in the ek gabwa, named after the Pleiades, which then rise low on the western horizon.

/161/ Then follows the ol simdjaual, the season of the lighter after-rain, and then the ol ngeth, the period of hunger, of drought.

The months of ol dumerii are 1. ol gleen, in which the goats and sheep bring forth young; 2. ol ekilik, that is, the heat of the sun; 3. ol gaiae.

The months of en gabwa are 1. le ewe, formed from or ewe= green valley. The rain, which has fallen meagerly up to now, has been sufficient to cover with fresh green the valleys and deeper lying places in the otherwise still yellow, dry meppe. 2. en nomiau, the dark, gloomy one. The sky is cloudy, it rains a great deal, the days are gloomy and dark. 3. ol lenderua, formed from nemeri = fat; the cattle men become fat because of the young, fresh grass.

Lk Marker--232 G-8 (1895-ca.1908) 1910 FL12 Masai FL12

/[illegible] /

• 805 821 132 The months of the ol alaudjeroi are: 1. le loguenja alaudjeroi, also called olkai olaiok, that is, the tied-up bulls. As a result of the rich fodder of the recent months, they have become wild; in the pasture they would be constantly fighting with one another, hence they are separated. 2. loiloe (= middle) alaudjeroi, or also, but more rarely, called ol ole. 3. ledjeuk, that is, cold; cool weather distinguishes this month.

805 821 132 261 272 [illegible] The ol angit starts with the month kilele, that is, noise and strife. The pasture is sparse and as a consequence the cows give too little milk to satisfy all the people. Everyone tries to appropriate for himself some of the milk from the livestock of others, through which strife and brawls arise. Finally the milk no longer extends to necessitous satisfaction, and the majority of the warriors with a few [illegible] eating, which usually lasts not only through the entire month, but also even over the next month of ol dalgue or ol dalau or ol dalgauch, since even then the milk is still very scant. The name seems to be formed from the word ol gauchauch = food scarcity. Not until the beginning of the third month, of the lomhoogo, do they return to the kraals. From the abundant meat meals they feel very strong, and the heavy use of nerve-stimulating roots has affected their nerves to a high degree, and almost daily one or another has a fit of rage (1).

[illegible]

1. Cf. XIX, Nerve Allowers.

805 The Masai do not count years. Rather, they designate the year after the event seeming to them the most important one that happened during it, for example, after a livestock epidemic, a drought, the death of the high chief, a war expedition especially rich in spoils, etc. (1).

[illegible] 1. Just as the Babylonians, even in the 3rd millennium B.C., did not count the years, but gave each year a name after an outstanding event in it, especially after the deeds of the king. One proceeded similarly

/160 cont./

805 [171]

/footnote 2 continued/ in Egypt, as the so-called Palermo stone has shown (Vorderasiat. Gesellsch. Geschft. Mitt., 1905. II.)

Proceeding from the present year, one also designates, with the help of yesterday and tomorrow, etc., the next years in the past and future: ol arí le ńgolé otolomoje (ol ari = the year, ńgole = yesterday, otolomoje = /161/ elapsed), last year: ol ari l eńg aiolon otolomoje, the year before last: ol ari l oguni otolomoje, the last year but two. Furthermore ol ari taisere olotu (taisere, tomorrow, olotu = future), the next year: ol ari l eńg aiolon olotu, the year after next: ol ari l eńg aiolon edia matua olotu or, more briefly, ol ari l oguni olotu, the third year coming, etc. One very seldom hears designations going beyond the last and next year.

804 The only measure peculiar to the Masai is the hand span (en demata), measured, with outspread fingers, from the tip of the thumb to that of the middle finger. I saw only that the people measured with this the length of the spear blade, spear shoe, and sword blade, and heard how, upon ordering the parts named, they designated with so-and-so many hand spans the desired length to the smith.

XVIII.

000 Livestock. -- Cattle. -- Care. -- Castration. -- Donkeys. -- Goats. -- Sheep. -- Camels. -- Names for cows. -- Ownership marks. -- Brand scars for beautification and originating from the treatment of sickness. -- Cauterizing the horn attachments. -- Birth assistance. -- Sicknesses and their treatment. -- Cowbells. -- Tending the livestock. -- Drawing blood. -- Slaughter. -- Cutting up the animal and distributing the meat. -- Nomenclature of the livestock. -- Pasture in the steppe. -- Stockbreeding by the European settler. -- Useful and harmful fodder plants.

233 The Masai's greatest joy is the ownership of as much livestock as possible; all his thoughts and acts are directed toward preserving and enlarging the herds. The cattle are nebus (Bos indicus), among

/387 cont./

539 Moses is the founder of the seven-day week with the sabbath. That
773 the Israelitish week is completely identical with that of the Masai
171 and that the esubat 'n olori is the prototype of the sabbath needs no
121 further elucidation.

Moses, however, according to 3rd Moses /Leviticus/ 23, 24 and 4th Moses /Deuteronomy/ 29, 1ff. (5),

> 5. 3rd Moses /Leviticus/ 23, 24: In the seventh month, on the first of the month, shall ye have a holiday, a memorial of blowing of trumpets, a holy convocation. 4th Moses /Numbers/ 29, 1: And in the seventh month, on the first of the month, ye shall have a holy convocation: ye shall do no work occupation: it is to be a day of blowing trumpets unto you.

is also the founder of the new-moon sabbath, the new-moon day, to be celebrated as sabbath, of the seventh month, which has its prototype in the kinok 'n olori esubaté, which /328/ the ol aigwenani Gulale instituted, and to which the people are summoned by the sound of antelope horns that serve as trumpets -- the blowing of trumpets in the Pentateuch passages cited.

The question as to what may have determined the number 7 is
539 answered by the Masai division of the month, in which we find four
773 days especially distinguished: the fourth as new-moon day, the tenth
171 as the concluding day of the first decade, the seventeenth as an un-
121 lucky day in daily life and a lucky day in war, the twenty-fourth as
805 the initial day of the "black darkness" (en aimen nanki). A succession of seven more days ends, in the thirty-day month, with the first day of the following month. Accordingly there arise the following

/328 cont./

four series of seven days each:

4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30/1	1/2 (1)

1. The Chaldeans divided the first 28 days of every month, which began with the new moon, into four sections of seven days each; the last day of each section was regarded as an unlucky day, on which various performances were forbidden; cf. 2nd Part, XVII, concerning the similarity of the preceding with that of the Masai. The origin of the other, five-day Babylonian week and the ten-day one of the Egyptians, both of which start in each month with the first day of it, the new-moon day, we find again among the Masai in the division of the month by decades, which is distinguished here by the addition of nggera in the designation of the 10th, 20th, and 30th day of the month.

According to the tradition of the Masai, the very first week began with a new moon (that is to say, on the fourth day of the reckoning of the month); the first esubat 'n oloń therefore fell on the 10th, the tomon nggera. Now the next one would have fallen on the 17th, the ol onjugi, on which, however, as tradition expressly states, such a day was not supposed to be celebrated. Perhaps this, together with the circumstance that the end day of the fourth row in any case fell in the following month, was the reason for not stopping with the old, seven-day divisions, the first of which always began with the new moon, but to let the series run on, regardless of the moon. This explanation sounds very modest, but it conforms throughout with the mental quality of the Masai, which would scarcely justify a search for a more profound argument.

The eclipse of the moon.

When the moon dies (i. e. when there is an eclipse), all the old men and women, the warriors and children come out of their huts and collect together outside. One man then sings in a loud voice deploring the loss of the moon, and everybody present joins in the chorus.

They continue singing in this manner until the moon begins to reappear, when they all shout together as loud as they can:

'Moon, come to life again!
Moon, come to life again!'

When they see that the moon has returned to her normal state, they enter their huts and go to sleep.

They do the same thing when there is an eclipse of the sun, the

The stars.

There are three groups of stars with which the Masai are acquainted.

They know whether it will rain or not according to the appearance or non-appearance of the six stars, called The Pleiades[1], which follow after one another like cattle.

When the month which the Masai call Of the Pleiades[2] arrives, and the Pleiades are no longer visible, they know that the rains are over. For the Pleiades set in that month and are not seen again until the season of showers has come to an end[3]: it is then that they reappear.

There are three other stars, which follow one another like the cattle, called The old men[4], and again

[1] The Pleiades are seven stars (six of which are visible to the naked eye) situated in the constellation Taurus. They are above the horizon from September till about May 17. The coast people say: Kilimia kikizama kwa jua huruka kwa mvua, kikizama kwa mvua huruka kwa jua, when the Pleiades set in sun (sunny weather), they rise in rain; when they set in rain, they rise in sun.

Comets.

When the Masai see a comet, they know that a great trouble will befall them, the cattle will die, there will be a famine, and their people will join the enemies [2].

It is said that a comet was once seen before the Europeans arrived, and as some Masai children were watering the cattle at a pond after herding them, a creature resembling an ox but green in colour issued from the water. The children were frightened, and killed it. They then disembowelled it, and found that its body was full of caul-fat instead of blood. On returning to the kraal they related what had occurred.

When the medicine-man heard the story, he said: 'If we see another comet, people who are green in colour

[1] Lit. the star of the tail.
[2] The Dinkas have a similar tradition (Kaufmann, *Schilderungen*, p. 122).

The divisions of the day [1].

The Masai have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (6 p.m.).

There is also the time called Nightfall, or the hour for gossip (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the buffaloes go to drink—this latter is the hour before the sun rises, (which the Swahili call *Saa kumi* (4 a.m.).

There is also the time called The blood-red period *or* When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (6 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands *or* is opposite to one (midday), The shadows lower themselves (1–2 p.m.), and Afternoon.

[171] [1] The Dinka divide their day in much the same manner as the Masai (Kaufmann, *Schilderungen*, p. 131).

Seasons and months.

There are four seasons and twelve months [1].

The months of showers:

1. June. This is the month after the rain of the Pleiades and the first month of the year.

2. July. The [illegible] wrangle and squabble [illegible] the cows give but little milk.

3. August. The grass having become dry, food for the cattle is only found in the valleys.

The months of hunger:

1. September. The trees flower in this month.

2. October. This is the last month of hunger. When it is finished the lesser rains may be expected.

3. November. The clouds become white.

The months of the lesser rains:

1. December. This is the month when the lesser rains fall in showers and the ground looks like stools or cloths for carrying children in.

2. January. The sun comes out again, and the lesser rains stop.

3. February. This is the last month of the lesser rains, when flocks of small birds (Buphaga?) follow the cattle.

[1] The Dinka have two seasons and twelve months (Kaufmann, *Schilderungen*, p. 131).

753 Ten emweiyu 'l-tuñganak

Yawning, hiccoughs, sneezing, and illnesses.

When the Masai yawn, they are said to be sleepy. If a small child yawns, his mother grasps his mouth between her fingers to prevent it from stretching and becoming big like the savages' mouths.

If a person has hiccoughs, it is believed that he will eat some meat.

When a person sneezes, he says to himself: 'Somebody is calling me.' If other people are present, they say to him: 'May God make your head hard,' or: 'Have good health.'

When a Masai falls ill, it is said

[1] The thirteen lunar months of the solar year are doubtless thus accounted for.

According to Hollis, p.275,
/xvi cont./ the Pleiades are only six stars among
• 821 the Masai, likewise in the pictorial representations of South Arabian
171 tomb inscriptions (in contrast to the seven circles of the Babylonian
174 Nergal symbol); the name of the bearers of the religious tradition
192 of the Masai, el-kiboron, coincides strikingly with the expression for priest, kabîr, in the old Minaean inscriptions of Yemen (2).

[576] 2. Quite remarkable also is the correspondence of the Masai custom that when one is inside with her he plants his spear in front of the hut so that another will not enter (Merker, p. 109 and p. 158) with the similar custom among the southern Arabs (here only staff instead of spear) given by Strabo (Book 16). -- Also that the "speaker" stands at the head of the warriors is reminiscent of South Arabia (cf. kail, chief, actually speaker, as well as saijid, "master," probably has the same etymology, cf. Syrian sewîd, speech).

192 The specifically Ethiopian word dengel, "virgin" (originally prob-
197 ably "young woman" in general), is the same as the Masai en-
194 dangile, "young woman" (after the circumcision); tongs, el-garamet, is the Arabic el-kullîbat, and cowbell, eng-gurugur, the Arabic al-gulgul, en-abere, spear, perhaps the Arabic el-ibra, needle. The name of the liana species mogongora, from which the Masai take a fragrant wood for therapeutic purposes (Merker, p. 27 and cf. p. 196, ol-magirigiriemi, a vanilla-scented perfume), is very reminiscent of the South Arabian name for frankincense, mugr, just as in general the reiteration of the second half of a word, popular among the Masai (for example, gadardar, a /xvii/ tree name, airafarai, a shrub), is likewise in turn a peculiarity of Ethiopian, where it is used especially for the formation of color names (warakrik, gold-green : Hebrew jerakrak, hamalmîl, green, but also dabarbîr, backlike : hill, and the Tigre plant names gondefdafe, endufduf, amferfaro, and handugdug). All these
[114] are definite traces that make Merker's naming of the Masai as an originally Semitic and then, more specifically, an Arabian people seem fully justified.

/22 cont./

613 Masai, is foreign to them. God rewards them for their virtue by
[157] protecting their herds against predatory animals and thieves. It is
not supposed to have yet happened that one of their cattle was
613 killed by a lion or otherwise stolen. The El kiborón are particularly
789 esteemed by all the other Masai on account of their ability to cause
821 rain. The author one day saw such a rainmaker at "work" near a
Masai kraal. He was lying on the ground under a big leather apron
such as is worn by old men, so that one could see only a slight
movement of the arms and now and then hear a soft murmur. After
a while he stood up and explained that rain would "soon" come.
Since I had had rain during the preceding night in the camp six
hours away, it is very probable that here, too, it had not failed to
appear for very long and thus saved the reputation of that rain artist.

613 The only slight differences in the customs of the El kiborón
lineage compared with those of the other lineages will be discussed
in the individual sections.

/23/ II.

000 Kraal. -- Construction and arrangement of the huts. -- Stall for
the livestock. -- Types of kraals. -- Polygyny: the principal
wife. -- Property relations, exchange of wares, earnings: family
head. -- Expelling and separation of the family members. -- The
family kraal. -- Daily life. -- Work. -- Foods. -- Tobacco. --
Honey beer. -- Play. -- Household equipment.

361 In the vicinity of a few shade trees and a small brook the Masai
villages lie scattered in the burning hot steppes. They are circular
kraals (eng ân, ng aiñti or eng anâsa, ng anâs [Fig. 2]), which
are formed by a ring of huts (eng adji, ng adjidik) built close to
one another. A kraal contains 20 to 50 huts. At two places
opposite each other are found the entrances (eñ gischomi) three to
342 four meters wide. Since the Masai, as nomads, continue to live
361 in one place only as long as they have good pastures for their live-
stock, the huts are /Ill. 5 appears here/ built easily and casually
out of material available everywhere.

/158 cont./

805 • [821] This week, according to the tradition of the Masai, once in the dim past began on a new-moon day. Since then its succession has run through months and years, without consideration of the moon.

The Masai reckon according to lunar months, which in ordinary life are taken as having 30 days. They differ very essentially from the lunar-month reckoning customary elsewhere in that they do not start with the day of the new moon, but rather this day is already the fouth one in the Masai month. The designations for the days are the following:

1st day: ebor ol aba nabo.
2nd day: ebor ol aba 're.
3rd day: ebor ol aba unî.
4th day: ertaduage duo ol aba, the moon is to be seen; more rarely also ebor ol aba uigwan.
5th day: ebor ol aba oimîit.
6th day: ebor el aba olle.
7th day: ebor el aba nabiachana.
8th day: ebor ol aba isiît.
9th day: ebor ol aba endorot.
10th day: ebor ol aba tomon neggera (2).

2. neggera from the verb-ger = to be silent.

11th day: ebor ol aba tomon-ebo.
12th day: ebor ol aba tomon-are.
13th day: ebor ol aba tomon-unî (or tomon-eguni).
14th day: ebor ol aba tomon-uigwan.
15th day: ebor ol aba tomon-oimîit or ol gadet = the one looking across. The rising full moon looks across at the sun not yet set.
16th day: (ol aba) tomon olle or ol onjóri = the greenish one (3).

3. In addition to this counting, there also runs a second one, which, from the 16th on, counts the days of darkness (en aimen). In this, the 16th day is eschomó nabo en aimen, the 17th eschomo

/159 cont./

805 The 10th day, as tomon ngeera, as the final day of the first decade.

The 15th day, as ol gadet and final day of the eng ebor ol aba.

[777] The 16th day, as ol onjori: it is the unlucky day for war and the initial day of en aimen (= the darkness).

The 17th day, as ol onjugi: it is the most important unlucky day in daily life, but on the other hand, is regarded as a lucky day in war: on the ol onjugi people do not change dwellings, do not shave their heads, and do not undertake any circumcision.

[777] [784]

The 18th day to 20th day, as en nabiale.

The 20th day, as en ekiboshe, on which the boys belonging to the El kiboshe lineage are circumcised, and as the final day of the second decade.

The 21st day to 23rd day, as ngeshe.

[784] The 24th day, as initial day of the en aimen nanki: on it no sacrifices may be offered, and frequently too, just as on the subsequent en aimen nanki days, no circumcision is to take place.

The following days up to the end of the month, as en aimen nanki.

Within these days, the 4th, 10th, 17th, 24th, and 1st are again especially familiar.

805 821 132 Three months form a season: four seasons, the year (ol ari). The names of the seasons are:

Ol dameri, that is, the time of little rainfall, which precedes the great rainy season. This falls in the ol gukwa, named after the Pleiades, which then rise low on the western horizon.

/160/ Then follows the ol aiodjeroi, the season of the lighter after-rains, and then the ol ambi, the period of hunger, of drought.

The months of ol dameri are: 1. ol gimas, in which the goats and sheep bring forth young: 2. ol ekiliu, that is, the heat of the sun: 3. ol gulua.

The months of en gukwa are: 1. le ayai, formed from ayai = green valley. The rain, which has fallen meagerly up to now, has been sufficient to cover with fresh green the valleys and deeper lying places in the otherwise still yellow, dry steppe. 2. en nemian, the dark, gloomy one. The sky is cloudy, it rains a great deal, the days are gloomy and dark. 3. ol dariarua, formed from nemari = fat: the cattle soon become fat because of the young, fresh grass.

/101 cont./

805 The months of the ol sirelpmul ever 1. le lagurje sirelpmul, also called ollai oilak, that is, the tied-up bulls. As a result of the
• 821 rich fodder of the recent months, they have become wild; in the
132 pasture they would be constantly fighting with one another, hence they are separated. 2. Ialoe (= middle) sirelpmul, or alas, but more rarely, called ol ale. 3. Ialjerok, that is, cold; cool weather distinguishes this month.

805 The ol angki starts with the month ialak, that is, snow and
821 mile. The pasture is sparse and as a consequence the cows give too
132 little milk to satisfy all the people. Everyone tries to appropriate
241 for himself some of the milk from the livestock of others, through
242 which mile and bawle arise. Finally the milk no longer extends
(576) to necessitous relatives, and the majority of the women with a few cattle move into the forest for meat eating, which usually lasts not only through the entire month, but also even over the next month of ol dolgoe or ol dalaa or ol dolgorch, since even then the milk is still very scant. The name seems to be formed from the word ol gorchorch = food scarcity. Not until the beginning of the third month, of the lomkogge, do they return to the kraals. From the abundant meat meals they feel very strong, and the heavy use of nerve-stimulating roots has affected their nerves to a high degree, and almost daily one or another has a fit of rage (1).

(576)

1. Cf. XIX. Nerve Ailments.

805 The Masai do not count years. Rather, they designate the year after the event seeming to them the most important one that happened during it, for example, after a livestock epidemic, a drought, the death of the high chief, a war expedition especially rich in spoils, etc. (1).

[171] 1. Just as the Babylonians, even in the 3d millennium B.C., did not count the years, but gave each year a name after an outstanding event in it, especially after the deeds of the king. One proceeded similarly

/Text cont./

[315] [319] work. Every day they receive the best food in abundance. Here, however, in accordance with God's command, each one may marry only one wife. The other world, like the earth, is divided into individual lands, each of which is intended for the souls of one people, so that the person who arrives there will find his deceased relatives. Bad human beings are denied this paradise; they are driven into a barren, waterless desert. Those not so bad also gain entry into paradise through God's grace, though not to live in carefree happiness, but to do hard work.

[317] This is the Maual religious doctrine as it is handed down and taught by the old men. The supernatural explanation of natural phenomena has nothing to do with the religious doctrine. In them one sees only the works or expressions of God and therefore observes at least the more powerful ones with something like sacramental awe. It should be expressly emphasized that it is only a matter of this and not, say, demonstrably, the deification of personified natural forces.

[318] [321] The sun (*ulg ulat*) is regarded largely as a reflection of God, like the gloriously colored morning and evening sunsets. The clouds mask God before the eyes of mankind, they surround him. From them he looks down on the hustle of the earth. This seems to explain why the Maual call the redness of the morning and evening sky '*Ng ai sarigi*, the clouds '*Ng ai salen*, and the blue, cloudless sky '*Ng ai sarch*. These literally mean "the red God," "the white God," and the "black God," but should properly be translated as "the divine red," "the divine white," and "the divine black," for actually the people see in these phenomena no gods and nothing godlike or to be worshipped like him. It should also be mentioned here that God, who in ordinary speech is always called '*Ng ai*, is often called '*Ng ai sarch* or *Hui sarch*, that is, the black God, in the prayer songs to be discussed later. The Maual themselves do not know any explanation for these strange word-formations, and I have not been able to learn anything from them from which an interpretation could be derived.

/[319]/ More informant than the above explanation for the sun is the one that it and the moon are servants of God, whose duty is to illuminate the earth. In this the sun is regarded as feminine, the

/206 cont./

776 moon as masculine, corresponding to their word formation, eág eiob
821 and oi aba. That this view is not peculiar to the Masai, but was
[177] somewhat uncritically adopted by them is evident from the fact that to a question about the reason for it one is given a very childlike reply, if any at all. "The sun has to work all day, the moon only a few hours at night, consequently the overworked sun is probably a woman, corresponding to the earthly performance of work!" Others again have the sun and moon married; sometimes the former is the man, sometimes the woman in this marriage; it is only certain that both travel, one behind the other, toward the west, where the commoe hut stands in the clouds. Where the tendency toward personification
[177] of natural phenomena is peculiar to a people, one must expect that firm views exist at least about the most important and most frequent ones, and therefore the uncertainty in these explanations also shows that it is a matter of something that the Masai adopted, without having any understanding of them.

The first-born child of 'Ng ai, the girl Barsal, brings to human beings the greatest benefit, the rain, and thereby shows that God is satisfied with the doings on earth. His eldest son, Ol gurugur, announces through thunder and lightning that God is angry with human beings because of their bad behavior and at the same time admonishes them to improve. A rainbow is the sign that God is satisfied with the doings of the Masai and is therefore well disposed toward them. Wind and storm are the raging of a wrathful God. Hail announces coming
821 rain. A fireball (bolide) shows that now plentiful rain will fall and
787 that the people will be spared misfortunes, such as livestock epidemics and pox. A comet, on the other hand, means misfortune; sickness and death will befall human beings and livestock. Upon the appearance of a very bright comet in the eighties there soon followed the great livestock epidemic, rinderpest and tuberculosis.

821 The Milky Way is the path along which the children of 'Ng ai
776 wander as bright stars. From here they observe the doings of mankind and report on them to God. Other stars are his eyes; now and then one of them shoots forward from there toward the earth, in order to see more accurately -- a shooting star. Venus, which the Masai call en kilegen, announces rain through particularly bright

/206 cont./

• 821 light. The nebes minor and major /the two Magellanic Clouds/ are
[196] two lakes from which the cattle of 'Ng ai drink. The Pleiades
(ñ gaiwa), through their rising in the west, announce the onset of
the great rainy season named after them. In Orion λ and the two
small stars beside it form a constellation called 'ñ golia = the
widows. The stars δ, ε, ζ, θ and the two small stars on a line with
it form another constellation. In it δ, ε and ζ are three ol morop
who are about to marry three widows. /207/ This constellation is
called 'ñ gapiak = the remarried widows, in contrast to the three
[196] 'ñ golia, who stand alone. The two large stars in Centaurus (ol
orupe) and the four principal stars in the Southern Cross are boys who
[187] tend the cattle of 'Ng ai, which are represented by the small stars of
the Milky Way. A ring around the sun or moon heralds rain. For
the warriors on an expedition this phenomenon is regarded as promising rich spoils. Just as sun and moon have made a kraal for themselves, so will the warriors on their way have to lay out such a one for the captured livestock (1).

[823] 1. For the cardinal points (e' lubot Eng ai = the sides of God) the Masai have the following names: North = Kîpeklô or Kîpeklô, which also designates the land of the original home. South = e' mérei, i.e., the battle; it is the direction in which the Masai traveling south always had to endure new battles against the long-settled ol mgg. East = engilebunoto ebg oing = the sun rises. West = endoijeroto ebg olon = the sun sets.

782 In case of distress, danger, sickness, or other calamities, all the people pray to God. Otherwise the men say a prayer mostly only on special occasions, whereas the women pray daily, mornings and
[184] evenings. Children do not pray at all in some districts, in others only the girls pray, and in still others all children learn it at the age of
[823] six to eight, usually through their mother. In praying, one turns the face to the north, or in the morning toward the rising sun and in the

*132 Rainfall: Rainfall is relatively high in the neighborhood of Lake Victoria and becomes lower toward the east. The gradient in average annual rainfall is from around 40 inches in the west to about 20 inches near the Rift. Near Lake Victoria there is significant rainfall throughout the year and dry periods are relatively short. Throughout most of the rest of the study area there are significant dry periods, and rainfall is considered to fall in two periods, the "long rains" of March through May, and the "short rains" of November and December. However, examination of the records show that throughout the study area there appears to be one long but discontinuous rainy season extending from November through May, with peaks in March and April, and sometimes a decline in rainfall in January. [221] Possibly the reason for the widespread belief in two distinct rainy seasons, even on the part of residents in the area, is the nature of the rains. During the peak of the traditional long rains, in March and April, the cloud cover is general at least during the afternoons, when it amounts to a high overcast. For most of the rest of the year rainfall comes from less general storms or showers which pass quickly, or occasional general but brief storms. In the traditional short rains the overcast and rains are more widespread. During the period between the rains, late December

/48 cont./

585 her own. Where a jus primae noctis is customary -- frequent, but not general -- it belongs to one or two old comrades-in-arms of the young husband. One who does not grant the jus primae noctis when it is claimed is insultingly called ol alomõni or ol ɔmischo (formed from a-lõm, that is, refuse). He refuses others what they have a right to and must expect them to steal a few head of cattle from him in the next few days without his being entitled to raise a complaint about it. One who does not want to go along with this old custom, which is said to happen, has the wedding take place without any festivity, in order to avoid it. The bridegroom simply hands over the bride price, whereupon the bride, without any ceremony, follows [591] him into his already completed hut. This dwelling lies either in the kraal of his father or in the warrior kraal occupied by the young husband up to then and remains there until all his age mates are married: only then do the married couple build their own kraal.

/49/ After the married couple have moved into their home, the wife may not leave it for the next two days. It is customary for the husband to present her with three cows and a bull during these days, and on the third day she accompanies this livestock to the pasture, but does not stay there. During the next three days the wife does no work: not until the fourth day does she start it, and to be sure, with the milk- [822] ing of a plain black cow. According to the Masai explanation, the plain black is the symbol for quiet seriousness, whereas bright colors signify gaiety and lightheartedness. The woman is supposed to perform her duties with seriousness and not neglect them, lightheartedly rambling about, and make her husband angry by idle gossip.

768 587 If the marriage is dissolved by the husband's death, the widow may, if she is willing, become the property of his eldest brother or half brother: she may live with the former, whereas the latter may marry her legally after the expiration of three or four months. Upon 586 the death of the wife, the husband pays no compensation. A divorce may be brought about if the man drives out the woman or if the woman runs away from the man and refuses to return. In the first instance, the divorce is preceded by a family consultation in which the head of the family pronounces the divorce. The woman must

/76 cont./

561 701 According to this, the institution of the age classes together with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors. [703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 702 As soon as the circumcision wound has healed, the circumcised exchange the long apron (ol gelí, el gelíni) for the short skin-cape 561 (e megiti, /77/ megitin), again put on their ornaments, anoint their [291] bodies with red paint and, after they have once more shaved their [302] heads, set out as el barnot (sing. ol barnoti, formed from barno = [411] bald-headed), armed with spear, club, sword, and shield, into the bush to celebrate the ol geted l ol gutui. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect [342] a kraal of thorns for themselves or even build small huts out of leaves. 701 The festival consists of consuming large quantities of meat and noth- 702 ing but meat. For this each participant furnishes a fat ox obtained 561 from his father, which must be plain-colored, black if possible. [822] [822]

561 /77 cont./
701 Mixed, light colors are the symbol of fickleness, frivolity, flighty,
702 childlike, and childish sentiments; they are not proper for adult men
152 with a serious conception of life. The festival lasts about a month
865 as a rule. During it the youths practice handling the weapons, tell
[822] each other gruesome war stories, which they have heard from warriors or invented themselves, and thus stimulate their imaginations, just as the reading of Indian and pirate stories does this on occasion among
[276] European boys. They artificially make themselves positively wild, to which also the taking, still strange to them, of various roots and barks with a nerve-stimulating effect (which will be discussed later), which they add to the cooking meat, contributes a great deal. All their yearning is directed toward war and murder, everything in them is pressing toward killing an enemy, and enemies for them are all non-Masai. Each of them would like soon to be no longer an ebor alem -
[721] white, that is to say, not yet dyed with blood, sword. Not infrequently they turn against defenseless caravans if such happen to be in the vicinity. Whether or not spoils are to be taken in this is of no importance, only killing and murdering, they do not think any further. Many attacks on caravans have come about in this way. Such opportunities, however, are always rarities for individual troop of youths.
561 The rule is a war expedition against a sedentary tribe. After the
701 fighting, the el barnot again return to the paternal kraal to live there
702 a few more years. During this time they attach themselves more and
[721] more closely to the warriors, in order to learn from them and to improve themselves in the art of war. They accompany the warriors on their raids and now and then also take part in their forest meals. Nevertheless they do not gain admittance into the warrior kraal, which is just as wounding to their self-confidence as the circumstance that they are looked down upon by the warriors and treated almost like boys. The wish to be on an equal footing with the warriors grows ever keener in them. But they still lack two things for that: the name for their age class and the shield escutcheon.

561 In order to request the bestowal of the former from the ol oiboni,
[791] a gathering (eñ giguana) (1)

2. Any gathering for a consultation is called this.

/78 cont./

714 These[1] consist of curves, sectors of circles, lines and scallops,
53 which are painted on the shield's surface in three colors, Pompeian
[822] red, black, and gray (1),

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs
[386] stand out in sharp contrast. One uses for this the red earth mixed
[824] with blood or with the juice expressed from the fruit of the Solanum campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black,
[239] pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

714 Today considerable confusion in the shield escutcheons already
53 prevails. The rarer the war expeditions of the Masai become,
721 thanks to European domination, the more the old formalities of war-
178 fare are sloughed off, and ancient rules, which formerly were never
[648] transgressed, are today all too often ignored; their purpose has lost
[669] its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons in and of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 A shield escutcheon (Plate 1)[2] may contain 1. the red warrior-
531 emblem (os serat' onjugi), 2. the black emblem (os serat' erok) (1),

1. To which the rare gray also belongs.

3. the ornamental band (os segira i el oko), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

1. [i.e., the shield escutcheons--Analyst]
2. [See pp. 604-607--Analyst]

/124 cont./

151 proved by the fact that they prepare the ground plan of the huts, the
[804] wire spirals and wire rings serving for adornment, etc., without mechanical measuring devices. For the same reason one recognizes their sense of symmetry in their weapons.

151 Following the Holmgren zephyr-yarn procedures, I examined 87
125 Masai, and, to be sure, 46 men and 41 women, on their sense of color. The test showed that of all only one man had "weak color sense," all the others, on the other hand, had "normal color sense." Here too the symbolic significance of the colors should be considered:
[822] black = calm seriousness, red (blood) = war, green = peace, variegated, and, to be sure, especially in the combination of red and white, expresses joy, gaiety, but also frivolity and fickleness.

Photographs of objects known by them they perceived correctly, those of persons known by them not at once, but always only after longer observation. Often the perspective foreshortening of an object in the photograph was incomprehensible to them; they regarded such a one as incomplete.

153 Their powers of orientation in the region and their memory for
151 paths once taken or stretches of land traversed are excellent. Their
153 memory for numbers seems to be better than that of most tribes in the
802 interior of East Africa, since, unlike the latter, they do not use
[211] mechanical aids such as notches in sticks, knots in string, etc. Their power of conceiving numbers does not seem to go beyond five; only a few could recognize at a glance the correct number of more than five objects placed before them.

53 Their feeling for plastic art is shown by the rich and not unhand-
517 some adornment, the handsome forms of their weapons, the painting of the shields, the decoration with cowrie shells and beads on utilitarian objects and clothing. Representational art is unknown to them. A feeling for music is completely lacking: their singing is arbitrary and without rules, the main thing in it is the text and the alternation in the vocal execution. They do not have musical instruments, for the antelope horn of the summoner to legal proceedings serves only to attract the attention of the people through loud noises. The following is a
522 common song to accompany the dance.(1)

1. Recorded by Herr Stabsarzt /staff physician/ Dr. Sivodrki.

Caves[1].—The story of the cave in the mountain of smoke.

There is a cave in the mountain of smoke, or as it is otherwise called Donyo Erok, in which Masai live. If you stand near its mouth you hear the voices of people calling one another and also the lowing of cattle[3].

Women go to pray at this cave, and take with them gourds full of milk and honey and butter, which they leave there. The inhabitants of the cave come during the night and eat these things.

Barren women, however, do not go to the cave as their offerings are not accepted.

If strangers who do not know about the cave cut a tree near it, blood is seen to issue from the wood.

The story of the cave of the Athi River and the Lumbwa Masai.

There is a cave near the River Athi, which river is called by the Swahili the Hippopotamus River. It is believed that when Naitero-kop brought the Masai in olden days from the district round about Kenya, and they arrived at Donyo Sabak,

[1] There are numerous traditions connected with the caves which exist in Kamiland. The stories here related are examples.

The refuge[1].

If the Masai men beat their wives, some go and seek refuge elsewhere, whilst others suffer and stop at home.

Should a husband beat his wife, but not badly, she will seek refuge in the house of a member of her husband's age.

When the man with whom she has taken refuge returns her to her owner, the latter does not beat her again, for he fears that he will be cursed by the members of his age.

If a woman commits a serious crime, and knows that she will be beaten in consequence, she goes to her father's kraal, and is given an ox, which she takes to her husband and begs forgiveness.

Death.

On the death of a child, or a warrior, or a woman amongst the Masai, the body is thrown away[2], and the person's name is buried, i.e. it is never again mentioned by the family.

Should there be anything which is called by that name, it is given another name which is not like that of the deceased.

For instance, if an unimportant person called Ol-enana (he who is soft, or weak, or gentle) were to die

[586] [1] Divorce appears to be unknown amongst the Masai.

[2] The body is always taken to the west of the kraal, towards the setting sun. It is laid on the left side with the head towards the north, so that the face looks towards the east. The legs are drawn up to the chest, the left hand supports the head, and the right arm is folded across the breast.

[823]

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

was not even put through the horrors of the tub. Sometimes, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

And so life went on, and he was promoted to the rank of a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder, leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on these occasions conveyed their household gods, though his mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and rice-land in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngai (God, or the heavens). He heard also that the place of Ngai was among the eternal snows of Kilimanjaro, or that the thunders of Donyo Ngai (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the whence, whence, and whither of life. We can imagine him appeal-

/103 cont./

619 After a battle of the Masai among themselves, the conclusion of
728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called etabachage megiria — exchange of skin capes.

726 The length of the stretches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers,
[702] however, that the training of warriors consist only of marching, that,
[276] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the caravan people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they
271 compare the physical performances of the Masai with those of the Europeans in the tropics. The unsuitableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a good bottle of water on their
701 long migrations. The Masai, however, knows perfectly every little
182 spot of the steppes, he knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[323] water. Where water has collected in old hollow trees, and especially in baobabs, this is accessible to him through a series of steps made
[324] out of foot-long taps bored in horizontally. Finally, there are a num-
ber of water-rich roots and tubers, which, chewed, are very well suited
701 by their water content to quench thirst. They serve him, /104/ just as
183 the wild honey, not infrequent in the steppes, also serves as food on the
222 march. A curious bird, the honey indicator (Cuculus indicator, called
[325] el jakonot by the Masai), leads the Masai to the concealed honey holes.
[326] *As soon as it sees human beings it calls with a strident sound and then* flies slowly to the nearest honey place, to which the people follow it
[325] in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

en ubem en ger, sheep that has not yet dropped young;
ol balalo l en ger, male lamb;
em balal' en ger, female lamb.

233 The far greater part of the steppes offers excellent pasture; only
311 smaller or larger isolated stretches are quite unsuitable for this. The
[123] Masai know these precisely and scrupulously avoid them. What makes
them unsuitable is first of all the occurrence of grasses that bring about
digestive disorders and the lack of salt in sufficient quantities, through
[135] which a similar effect is brought about. In good pastoring places one
always finds salt licks. The rain water standing in a depression in the
[125] ground has leached out the very saliferous earth and, after evaporation,
has left behind a more or less strong, gray crust of salt. It is self-
evident that one avoids those places about which the presence of the
above-mentioned harmful insects is known. It is striking, however,
that ticks are not feared at all.

561 When the pasture around the kraal has been grazed off, a change
233 of dwelling is decided upon, which takes place as soon as a new
pasture grounds has been chosen by a few people sent out. Then there
is activity in the kraal long before daybreak. After the cows have
been milked, the cattle moves off as the first party. Then the herds
of goats and sheep follows, and after these /177/ the calves. Young

/206 cont./

821 light. The nubes minor and major /the two Magellanic Clouds/ are
[176] two lakes from which the cattle of 'Ng ai drink. The Pleiades
(ñ golwa), through their rising in the west, announce the onset of
the great rainy season named after them. In Orion λ and the two
small stars beside it form a constellation called 'ñ golia = the
widows. The stars δ, ε, ζ, θ and the two small stars on a line with
it form another constellation. In it δ, ε and ζ are three el morue
who are about to marry three widows. /207/ This constellation is
called 'ñ gapiak = the remarried widows, in contrast to the three
[176] 'ñ golia, who stand alone. The two large stars in Centaurus (el
ereno) and the four principal stars in the Southern Cross are boys who
tend the cattle of 'Ng ai, which are represented by the small stars of
[187] the Milky Way. A ring around the sun or moon heralds rain. For
the warriors on an expedition this phenomenon is regarded as promi-
sing rich spoils. Just as sun and moon have made a kraal for them-
selves, so will the warriors on their way have to lay out such a one
for the captured livestock (1).

[123] 1. For the cardinal points (e' lobor Eng ai =
the sides of God) the Masai have the following
names: North = Kipeldñ or Kipeldñ, which
also designates the land of the original home.
South = e' mpost, i.e., the battle; it is the
direction in which the Masai traveling south
always had to endure new battles against the
long-settled el mpg. East = engilebunoto eng
olol = the sun rises. West = endoijanno eng
olon = the sun sets.

782 In case of distress, danger, sickness, or other calamities, all the
people pray to God. Otherwise the men say a prayer mostly only on
special occasions, whereas the women pray daily, mornings and
[184] evenings. Children do not pray at all in some districts, in others only
the girls pray, and in still others all children learn it at the age of
[123] six to eight, usually through their mother. In praying, one turns the
face to the north, or in the morning toward the rising sun and in the

/3o7 cont./

782 evening toward the setting sun. Both the original home of the Maasai
• (823) and the paradise where the souls of the deceased live lie in the north.
Every prayer, as a rule, begins with 'Ng ai panai or 'Ng ai atomuno
or 'Ng ai atasia, i. e., Dear God, I pray, I plead. Following this a
praying woman thanks 'Ng ai for having protected her and hers and
prays to him further for protection, for the preservation and increase
of the livestock, and that many children may be granted her. During
the prayer she extends her arms toward the sky. During this she holds
bunches of grass in both hands or only one in her left hand, while she
has tied several blades around the right upper arm. With every prayer
the woman offers a little milk to God. Either she squeezes a few drops
out of her own breast -- and, to be sure, the right one -- or she pours
a little on the ground out of a gourd bottle. She offers a similar
sacrifice morning and evening during the milking, in that she lets a
little milk flow to the ground both from the udder and from the milk
vessel.

As has already been mentioned, men in general only rarely pray.
(813) The married men belonging to the Il kiteno lineage, who often pray
morning and evening, form an exception. I must leave it undecided
as to whether all do this regularly, since I met only a few old men of
this small and now very dispersed lineage. Among other married men
there are also individual ones who pray to God every morning to keep
them and their healthy and to give them a goodly number of wives,
children, and livestock. /3i0/ But these are exceptions. As a rule
they concern themselves with greeting God, in the morning after
having left the hut, by spinning several times in a northerly direction,
sometimes also in the direction toward the rising sun. The prayer
of the old men runs 'Ng ai panai, tatishage ai nam, ojaga e
magilé - Dear God, also protect me, give me strength! The younger
men, the warriors, pray in the morning, before they set out for a
meat meal in the forest, and during it in the morning and in the
evening. Furthermore, on a war expedition they pray daily, early
in the morning before marching off and in the evening after arrival
in camp. In doing so they squat close together, while a leader (ol
oigwenani) and a benefactor (o gerusia) go through the group.

hoo a cow, which he looks after and tends, it leaves, and by so doing enables him to live, for he can marry, and have children, and thus become rich.

Now cattle feed on grass, and the Masai love grass on this account.

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God.

If a warrior beats a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign.

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them.

Thus, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle.

Again, if a man who is proceeding on a journey sees a tree which has

fallen on the road, he pulls up some grass, and throws it on the tree; otherwise he fears that his journey will not be successful.

The Masai love grass very much, for they say: 'God gave us cattle and grass, we do not separate the things which God has given us.'

Whenever Masai women milk their cows, they take some milk from the gourd and pour it away, for they say: 'God likes this.'

The brand-marks and ear-cutting of cattle, sheep, and donkeys.

The brand-marks which the Masai use for their cattle are not alike.

For each clan and family there is one principal mark, and all the cattle belonging to the various members of a family are branded in a special way.

There are also small marks by which the actual owner can be recognized.

Besides branding, each family has a special method of slitting the ears of their cattle, sheep, and donkeys.

They likewise have smaller marks for each individual owner.

If therefore a cow is seen, it can be recognized as belonging to the *Aiser* clan, for instance, and also to such and such a person.

the ceremony is started by his being shaved, after which a sheep or bullock is slaughtered, which is called The (animal) that has caused him to be taken out (from the boys' ranks). 88|

On the second day the boy sallies forth to cut a tree called El-latim[1], which is carried by girls to the kraal, where it is planted at the door of the hut.

The next morning the boy goes and sits down outside the kraal to get cold. He also washes himself with water in which a fern called *Father's spear*[2] has been soaked. 88| 304 [824]

When the sun is some way above the horizon, his mother opens the gate of the kraal, and fetches an ox-hide which she puts on the ground by the right-hand door-post.

The boy then takes his place on the hide, and the operator, a Dorobo, comes together with the man whose duty it is to hold the boy.

The man who holds him straightens out his legs, and the boy sits between them and is circumcised[3].

If the boy winces during the operation, his mother is beaten with sticks; and if the boy's parents know that he will behave like a coward, they go away and hide themselves.

As soon as the operation is over, the

[1] This tree is generally called Ol-ollaiai (*Rhus* [illegible], Willd.), but it is called El-latim during the circumcision festivities.

[2] *Aspenium* sp.

[3] The circumcision of the Masai has been described in Thomson's *Through Masailand*, in Johnston's *The Uganda Protectorate*, and in *The Journal of the Anthropological Society for Great Britain and Ireland*, June, 1902 (Buggy). [113]

When the fire is dying down, the warriors standing outside are called, and told that, 'it is finished.' 622 574

They all run towards the spot, racing to get the horn.

The one who arrives first puts his hand in the fire, and, taking out the horn, stretches out his arm. He shows it to the others, and cries out: 'I have finished it.'

With this the E-ɛnɛta feast terminates.

Ɛɛwɛrɛi ɛl-ɛɛnɛɛi ɛɛ-ɛɛnɛɛdɛ ɛ ɛl-ɛigwɛnɛi ɛɛɛi ɛpa ɛkɛ ɛɛɛn ɛɛɛ ɛɛwɛrɛi.

The *Aɛnɛi*, or chief, is shewn on the same day together with the *Aigwɛnɛi*, or Counsellor, who was elected before the feast of circumcision. 622 302

Ɛɛwɛrɛi ɛi ɛɛɛjɛ 'l-kɛlikɛɛwɛrɛa ɛɛ-'ɛ-gɛlɛɛ-ɛɛdɛgi.

Afterwards the warriors may be shewn whenever they wish.

Ore ɣ' ɛɛlɛpi ɛɛɛnɛa, ɛɛyɛdɛgɛkɛ 'l-ɛnɛrɛa, ɛɛɛnɛi 'l-ɛpɛɛlɛa ɛɛdɛgwɛa ɛɛa ɛɛyɛɛi, ɛɛpɛa ɛn-jɛrɛ ɛɛji Ɛn-ɛn-'ɛ-ɛɛwɛi ɛɛɛki Ɛn-ɛ-'ɛnɛta.

When the warriors have elected their chief, they slaughter cattle, and wait for four or five months, at the expiration of which they proceed on a raid. This is called The (fulfilment) *of the vow or* The (*selection*) *of the chief.* 721

Ɛɛɛkɛɛ 'l-kɛrɛɛk ɛɛji ɛɛ 'l-ɛɛwɛi, ɛɛpik il-ɛrɛɛk.

They wear *native clothes*[1], called The vow[2], on which are sewn the seeds of the *ɛɛɛkɛɛkɛ* tree[3]. [292] [294]

Ɛɛpik ɛɛ 'ɛ-gɛk ɛ-'ɛɛɛɛ 'ɛɛɛɛ ɛɛji 'ɛɛɛɛgɛk, ɛɛ'ɛɛ 'l-kɛlikɛa 'l-kɛɛɛɛgi lɛ-'l-kɛɛɛɛa ɛɛɛki 'l-ɛɛɛɛk lɛ-ɛɛɛɛa.

They also wear necklaces made of twigs of the *ɛ-ɛɛɛɛ* tree[3], and called *Ɛɛɛɛgɛk*, and some carry their fathers' snuff-boxes or fans with them. [301] [324] [293]

[1] Before native clothes were introduced, dressed skins sewn together were worn. 'E-ɛɛwɛi garments are worn like the Spanish poncho, a slit being made in the middle for the head to pass through.

[2] A raid undertaken after a long peace is also called ɛɛ-ɛɛ-'ɛ-ɛɛwɛi. Any warrior who shirks his duties on an occasion of this sort can be put to death, and his murderer will not be punished. [286] [287]

[3] *Euphorbia tenuissima*, R. Br.

[4] *Acalypha fruticosa*, Forsk.

Games.

Small Masai children collect pebbles or berries, with which they play at cattle and sheep. They also build huts and kraals in the sand, and they make spears out of bulrushes. *Little girls make dolls of the fruit of the mango-tree*[1]. 959 [924]

Big boys play shoot in the herds of cattle. They choose a quiet animal, and pretend it is a lion. One boy stands by the cow whilst the others go and hide. When the latter return, the one who is standing by the cow chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; anybody who manages to escape and touch the cow has won. This game is called ilamkwan.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called 'a-dato. This game is called en-gudoi. 924 [919]

The warriors also play this game, but they do not care about it much. They have no boards, and make holes in the earth.

Peace.

If the Masai make peace with other people, whether enemies or other Masai with whom they have fought, the warriors seize two in- 925 [926]

The following medicines are used as fever medicines:

1. *Cassia* (?). The crushed bark mixed with milk or blood and water is drunk by a fever-stricken person. It is very hot, and when chewed tastes like pepper.

2. The roots and fruit of *Solanum campylacanthum*, Hochst., are mixed with hot milk and drunk.

3. *Acacia albida*, Delile. The bark is stripped off and boiled. The patient drinks this and vomits, after which he recovers.

4. Blood and hot milk are drunk.

5. *Zanthoxylum* sp. Babies are given a piece of the bark to chew as a preventive against fever, for the Masai say: 'The fever is afraid of this tree.'

The medicines used to cause vomiting:

1. *Lippia* sp. soaked in boiling water.

2. A goat is slaughtered and the undigested food from the intestines is taken by the patient.

3. *Harvisonia abyssinica*, Oliver. The roots are put into hot water which is given to the patient.

4. Leaves of a tree[3].

5. *Fernandoa* sp. Sick people are given the leaves to chew.

The medicine for nerve complaints: *Boehmeria cylindrica*, DC. The

bark or roots are mixed with hot milk and drunk. Old men are very fond of this medicine.

Medicine for the spleen:

1. *Maba* (?). The roots are boiled, and the medicine is mixed with hot milk, which is drunk.

2. *Rubus fruticosus*, Hiern. The boiled roots are mixed with honey.

3. *Lowandina* sp. The roots are mixed with soup.

The medicines used by the warriors in their slaughter-houses:

1. *Acacia abyssinica*, Hochst. When Masai warriors slaughter a bullock, they make a medicine out of the bark and roots of this tree. This they mix with soup and drink out of the stomach of the bullock. Warriors who have been wounded are also given this medicine in water to quench the thirst.

2. *Pappea capensis, forma foliis monoribus*, Radlk. Warriors like drinking water in which some of the crushed bark of this tree has been soaked. The water becomes blood-red in appearance and the warriors gain in courage.

3. *Acacia* sp. Warriors also become brave when they drink a medicine made out of the bark of this tree.

4. 5. *Croton* sp., Wild., and *Croton membranaceus*, Müll. Arg. A strengthening medicine is obtained from the roots of these trees, which is mixed with mutton soup.

[1] *Acacia Elatior*, Oliver, is also called Ol-kiliriti.

How fire is obtained.

When the Masai move and go far*, the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

[134] Ɛɛŋɛ 'l-Ɛɛnɛna il-gɛna il-ɛɛ ɛ ɛɛ-ɛlɛnɛ ɛ-ŋgɛrɛtyɛɛ ɛɛŋɛ.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

[134] Ɛɛr 'l-kɛjɛ ɛɛlɛnɛŋɛkɛ il-gɛna il-ŋgɛlɛlɛ ɛ ɛŋgɛna ɛɛ-ɛ-gɛna; ɛɛr 'l-kɛjɛ ɛɛlɛnɛŋɛkɛ ɛɛ-ɛlɛnɛ 'l-kɛjɛ pɛlɛa ɛɛnɛa 'ŋgɛ-ŋgɛjɛ, ɛɛnɛa il-ŋgɛŋɛ, ɛɛnɛ ɛ-wɛlɛ, ɛɛnɛ il-ɛɛnɛ.

The hard sticks are cut from *Ficus sycomorus* and *Elaeodendron* sp.; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

* When the journey is a short one the women carry fire with them.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngai, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngai. My lamp was Ngai. Ngai was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngai. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their ● 834 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the drum, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—cleanliness being ensured by wooden. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

855 Mowan found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time homeward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

545 In time Mowan's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the 764 day dawned for both of them, and one after the other, they formed the subject of horrible hyenas' laughter. Those have

561 Soon after the endorgore ceremony, the ilkiro take three or four of their charges to visit the "medicine man." They take with them three or four new gourds as presents for the "medicine man," who is called el-ukoni. They must also take with them the bark and root of a tree called inoikanyore. I have not been able to identify the tree; it is said to be scarce and is not found in the Loitokitok area. The root and bark are ground to powder and used to make a medicine named enaako ainu, an ingredient used in the preparation of a wide variety of charms. The ilkiro inform the "medicine-man" that they have broken the fire-stick and present the boys to him and say "Ol piron lang olir, kiva nabi"—"This is our fire-stick, we are one."

561 624 [537] On their return home the boys' leaders seek one of their number to appoint as their spokesman called Ol ai parmuni. They make no special efforts but during the many debates, to which they devote much time, they note those who show special ability; but ability to speak well is not in itself sufficient; there are other considerations of far greater importance.

There are certain families whose sons must not be chosen for they would certainly die if elected; again, the counsel of other families has an evil reputation and must be avoided. Nor would it do to select a spokesman from the Endipagi or medicine-men section or from the clans reputed to be unlucky.

The chief l'aiparmuni is one born of Masai parents in Masai country of a family from which l'aiparmuni of former age-groups have been chosen. He should be wealthy if possible and a member of a lucky clan, must be energetic, not given to favouritism, and known to be fond of his tribe. That he should be an outstandingly good speaker matters not, provided that he satisfies the other conditions. It is said that his efficiency in debate will improve after he is appointed.

The names of possible candidates are submitted to the ilpiron ilkiro for consideration; the ilkiro do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves. It is particularly a matter for the leading boys of whom there are probably several by this time. They are called ingopior, and are those who have shown ability and strength of character during the many debates already held. [564]

Usually a l'aiparmuni is chosen from among these ingopior. They discuss the matter secretly amongst themselves leading off one of their number on some pretext in order to be able to discuss him freely. When a decision is made the boys call some of the ilpiron ilkiro and send for the boy chosen. When he comes the ingopior say to him: "Ipo kiriaa el'aiparmuni"—We make you our aiparmuni. If he

561 hands. They are followed by the moran and the women who set both to mark where the elder has walked. When the circle is demarcated, they set to work to build a thick thorn fence to enclose the village. By the time the work is finished, it is evening. A special piece of olive wood is brought in readiness. The log used in a recent ceremony is described as being four to five feet long, and of the thickness of a man's thigh. It had been part of the trunk of a tree, not a branch. A tree leaning in the direction of the rising sun had to be found. When it was cut, it had not to be allowed to fall to the ground.

In the evening before the cattle return, the olive log is brought and one end is placed in the fire. The word is ——— and as the log burns away it is pushed further into the fire. The mothers of the moran each come with four small pieces of olive wood to light at the fire; this they take to their temporary hut made of kibe to start their fire. No other source of fire may be used. Great care must be taken that the log is burnt completely. A close guard is kept over it to prevent the cattle from disturbing it and to prevent evil-wishers from taking away the log to make black magic. The moran guard the log through the night and the morning.

[714] In the morning all the moran come and form a circle round the fire; they bring their spears, and wear lion-mane and head-dress. Four elders of known good character, with wives and children, then walk round the moran; two walk one way, two the other. One of each pair has a gourd of milk, the other a gourd of honey wine. As they walk they fill their mouths with milk or honey wine and blow it on to the sitting moran.

561 534 184 Each girl has a slipper of green grass which when removed is held in the left hand, the gourd in the right. As the liquid is sprayed, so is the green grass waved toward the moran. As they walk the elders call down the blessing of the Engare-Narok.

THE COIFFEUR OF THE MASAI WARRIOR

By H. F. I. Elliott

309. It is surprising to find that in Hollis' standard work on the Masai there is no precise description of the head gear of the 'morani' or warrior. No doubt the fashion has been described somewhere, but some details of present day practice in Tanganyika Masailand may perhaps be put on record here.

Of all the distinctive features of the Masai, this is the one which attracts most attention from the casual traveller and invites references to 'Roman Centurions', 'Red Indians' and the like. Its advertisement value is certainly considerable and not ignored by the Masai in their amateur or unconscious efforts to preserve their identity. Certainly removal of the coiffeur and its accompliment red ochre has a surprising effect in obliterating Hamitic characteristics of feature and bringing out those derived from the now liberal admixture of 'Bantu' blood.

310. It is still an customary for youths after circumcision to adopt the traditional garb, even though they may be sons of progressive parents and themselves have been to school, that there might well be an 'old school pupil' for graduates of the Masai school. It is by no means unusual to hear a pair of pigtailed and ochred 'morani' discussing their performances in some inter-house football match of their school days, while leaning on their spears in the precincts of a cattle market.

311. There are many variations of head gear to be found in Tanganyika, one, two, three or more pigtails, the 'ridged helmet' style, heavily plastered and heavily braided styles, but it seems to be purely a matter of fashion and not linked with clan, section, age set or even locality (except in so far as fashions naturally tend to be localised). The construction of all is basically the same and the result is covered by the single term 'Olmakie'.

The materials used in the head gear are as follows:

(i) a length or lengths of plant but straight stick one foot to fifteen inches long, cut from the tree known as 'Gutati' (*Tamarindus indica*) L., the name is also applied to the shrub (*Croton*) which may serve the same purpose at highland altitudes.

(ii) a strip of the inner skin of a sheep or inch wide and two or more feet in length.

(iii) several feet of fine string made from sinews or tendon.

(iv) a foot or two of cord made from the 'olomani' tree. This tree is, I think, correctly identified by Hollis with a species of fig, *Ficus Sycomorus*, the cord being prepared from the aerial rootlets. But there is some doubt in the matter which perhaps a reader of this note may get an opportunity to clear up. For Settlements

(Common Trees and Wood Plants of Kenya Colony) gives the Masai name of F. Sycomorus as 'Ol-ebel' and identifies 'Ol-ewal' (the name used by my informants) with a small tree growing on highland forest edges called Mawa, lowlands Ponk.

(v) Fat, sheep fat for gentlemen, but otherwise the best bovine rib fat.

(vi) Red ochre (el Kewal).

(vii) Ornaments, usually comprising a metal clasp, wire bangles usually strung with coloured beads (englak) and double-lobed copper weights (emberwa).

The method is as follows: The hair is grown until it hangs on the shoulders, that is, about nine inches long. This it does naturally and only in exceptional cases has to be shed out with cow hair. During the growing period the hair usually remains in a mop, but commonly is braided into short pigtails.

As soon as the necessary length has been reached, the hair is parted transversely across the top of the head, that is at right angles to the European fashion. The larger portion, that at the back of the parting, is painstakingly twisted by hand into braided strands which are then grouped round the end of the 'stick' stick or sticks (according to the number of pigtails to be worn) and lashed on with the gut string. The stick and hair ends are then bound neatly with the sheep skin strip so as to taper to a point.

The hair in front of the parting is divided into three equal portions and braided. The ends of each portion are bound together with gut string. The two side pieces which fall in front of each ear are then tied together by a cord under the chin, tight enough to hold them flat against the face. The central 'forelock' is finished off with a metal clasp.

If the warrior wishes to wear the ultra-smart 'helmet' style, the single pigtail is brought forward over the top of the head and its tip bound to the tip of the 'forelock' but as the pigtail stick is short and would therefore pull the forelock up, the latter is bound down by a further cord, passing across the forehead and tied at either end to the tips of the 'side-locks', which as we have already seen are firmly tied down to the face by the chin cord. As soon as the pigtail is securely fastened in the ridge position, the whole surface is liberally coated with fat, tinted with red-ochre, and the 'helmet' effect is complete.

The wire bangles with coloured beads pass through the top of the ear, and the copper weights are of course suspended from the earlobes, which have been carefully lengthened during many years of youth — usually by the insertion of wooden plugs. To overcome cases the ear lobe has been so stretched that if it is desired to get it out of the way, it can be trodden right over the crown of the head onto the opposite ear!

13 Huntingford E-4 (no date) 1953 FL12 Masai FL12

953 and then old men. If a boy has not previously received a name, it may have been
952 called by the name of his father's father; but at the naming ceremony it receives a
name which may be that of its father or a name not connected with any relative.
951 People are also given nicknames relating to their physical or other peculiarities.
There is much uncertainty about Nandi names; but every man has a patronymic,
consisting of O-le, "son of," preceding his father's name; this he appears to assume
after circumcision. Girls after circumcision may be referred to as E-ne, "daughter
of," preceding their fathers' name. At marriage, the husband gives his wife a new
name. The practice of teknonymy is a regular feature. Before the circumcision of
his eldest son, a man becomes known as "the father of" Se-ond-ei, i.e., if his son is
called Sondeu, he becomes Moyo Sondeu; his wife similarly becomes Gete Sondeu,
the mother of Sondeu.

955 The name of a dead child, woman, or warrior is not spoken again, and if the
54 name is an ordinary word, that word is no longer used by the family. Thus, if a
man called Chemwa, "the gentle one," died, on his death the word *mwa* would
be replaced in his family by some such word as *pulpul*, "smooth."

Circumcision (2 months)

958 Boys' circumcision ceremonies take place at intervals of about three years, and
959 the circumcision period is "open" for about four years. Though the operation may
be performed on boys singly or in small groups, the whole number of those circum-
[75] cised at the same time throughout Nandiland forms an associating group correspond-
ing in some degree to the Nandi *mat* (see pp. 20 and 48). Judging by the published
accounts, circumcision was a much less prolonged and ceremonious affair than among
the Nandi. Before a boy can be circumcised, the father must submit to what is called
ne-ibiroto e-ais, "the passing of the knife." After making honey-wine, he stays
alone in a small hut outside his kraal, dressed as a warrior. After four days, some
elders bring him back to his kraal, where he is told to remove the warrior's clothes
and become an old man. He can now then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the
afternoon after this has been done an ox or sheep is killed and eaten by the warriors
and elders of the neighbourhood. On the second day, the boy cuts a tree called at
[D2] this time *e-ldon*,* which the girls of the kraal carry to the door of the hut (in which
the boy sleeps?), where it is planted. On the third morning the boy gets up early
and sits outside to get cold, after which he is circumcised, the operator being often
a Dorobo. From the fourth to the seventh day he remains at home, and then goes
out, shooting with blunted arrows at the girls, and with other arrows at small birds
[D3] which he wears hung from his head. This is his occupation till he has recovered;
[D4] during this time he is known as *e-ngidin* and wears the dress of a married woman,
including the *e-ewata* earrings, and an ostrich feather on his head. After recovery
he is shaved, given weapons and warrior's clothes, and becomes *el-kamak*, "the
shaved one," i.e., a junior warrior. Till his local company forms *ne-mayata*, he
lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There
are no special times for this. No ox or sheep is killed before the operation. During
the period of recovery they are known as *e-ngidin*, and wear on their heads a wreath
of the Hyphaene palm, *el-mwiaan*, or of grass, instead of an ostrich feather.

Age-sets

964 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear
type, that is, they do not work in recurring cycles and do not come into existence
till they are required. Nevertheless, it is clear from the lists of Krapf (1860), Hollis
(1905), and Fosbrooke (1948), as well as from the Twenty age-sets (Hollis, 1901),
that some at least of the names are fixed and recur. In 1938 the seven O-Kimala

* *Erythrina tomentosa*, normally *ol-t-i-ldon*.

/10 cent./

Fig. 5. Road on the steppe between Kilimandjaro and Meruberg.

out of material available everywhere. Like every task in the bush, hut construction is the duty of the women. After the site for the individual hut (Fig. 9) is cleared of grass and brush and then leveled, the spiral-oval ground plan is undertaken in that the women scratch it on the ground with her toes. They do not use any auxiliary means for measuring it: measuring by eye is sufficient for the women who, even as a child, helped her mother with this work. Into the ground plan, at four-long intervals, poles (ol ḱmi, el ḱmi) about 1 1/2 meters long are stuck in the ground and joined lattice-like with thumb-thick cane-switches (ol gemmi, el gemmi). Then in the longitudinal diagonal seven to eight supports (ene ḱmiki) are dug in, over which a longitudinal bar (ol ewelenu, el ewelenuni) is put from one end of the hut to the other. Over this the poles are arched and the opposite ends lashed together with papyrus grass (ne ṱulia). By interlacing finger-thick switches (ne jaeiki, e jaeiki) with /ne/ and reed we make tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters high, 4 to 5 meters long and 3 meters wide. Sears' skins served primarily for roofing before the cloth-like rugs among the Dorobeek around the year 1900. Now, /Figs. 1 and 3 appear here/ when the blood lands have become receding small in contrast to former times, the switch framework is first packed with a layer of dry, long-bladed grass (ol gulinie or el gulinie) 15 to

/[illegible]/

small pole built beside or on the hut. The door opening of the hut is closed off at night by means of a mat's skin hung over it or a thorny branch dragged in halfway.

/[illegible]/ The individual huts are very close to one another. The space between two of them amounts to scarcely half a metre, so that in the evening the entire ring of huts seems closed except for the entrances. For protection against wild animals and monsters, the kraal is surrounded by a stout barricade of thorny acacia branches, with which the entrances are also cleared after the livestock has returned from pasture. In the place enclosed by the huts one finds a ring-shaped thorn barricade in which the livestock stays during the night: large livestock, calves, and small livestock

Ill. 1. Masai hut. Fastened with cattle dung.

/34 cont./
are separated from one another by thorn barricades, and the huts are often protected from damage by the cattle by means of thorny branches placed around them.

One distinguishes between kraals for the married (olog ai el morian) and such for the warriors (el moujata). In the former live the married men (el morian, el morian) with their families, in the latter the warriors (el moujata, el moiran) with their mothers and the half-grown, uncircumcised girls /37/ (en dim, e dojo). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moran kraals. A dense thorn-barricade extended around the entire kraal complex.

The married man on the average has five to six wives, wealthy men have in addition also a few secondary wives to whom they are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

276 adds some natron salt and beef fat, frequently also pulverized bark of ol amóra (Ocimum suave Wild.), and mixes the whole by further grinding. Small boxes (en dulet -- 'n duleta) made out of wood, bamboo, cattle or sheep horn, or even out of the horn of the Rhinoceros bicornis, which often are quite attractively carved and decorated with beads, serve as snuffboxes (Fig. 6). They are worn around the neck on thin chains made out of iron wire.

[415] [237] [531] [136] [273] [415]

Fig. 7. (1/2) Vessel for the preparation of honey beer.

273 Another luxury, also intended only for married men, is a kind of honey beer (en alacho namga) (Fig. 7). One dissolves honey in water and adds a piece of the root of the meppe aloe, ol sugumi, /36/ or a peeled and cooked piece of the root of the so-called liver-sausage tree (1) [824]

1. Named after the resemblance of the fruit to a liver sausage.

(ol darbol -- Kigelia aethiopica), both as a taste corrective and to hasten the fermentation. The mixture is allowed to stand and ferment three to five days in a warm place, say, in the vicinity of the hearth fire. Before it is drunk, one often puts in a few bunches of leaves from the ol gonjet bush, I suspect in order to stop the vinegar fermentation. The honey beer is quite strongly intoxicating, so that a drinking bout usually ends with complete drunkenness. Other brews, which the sedentary Negroes bring to the Masai for sale and which are made out of bananas and Eleusine, maize, or sorghum, are milder. The Masai do not distinguish these with names, but rather call them generally ol márua. [824] [439]

/<u>38 cont.</u>/

412 goat or sheep. Other shapes consist of such a piece of a thin tree
[237] trunk, which bears on its lower end a wreath of branches, or also
of a wooden handle on whose lower end, in slits placed crosswise,
[326] six two short cross-sticks. The blacksmiths make an and knife.
372 A little board (ng <u>ŋaŋkin</u>) /<u>ni</u>/ of soft wood and a twirling stick
• [324] (ni <u>kiŋk</u>, ni <u>kimuki</u>) of hard wood (1)

1. Especially from the ni <u>lakiki</u> (<u>Ficus ferruginea</u>) and ni <u>demegik</u> (<u>Parkia Dumeriliii</u>).

serve as fire-lighter (Fig. 16). To make fire, one holds the little board firmly on the ground with both hands, while another kneels below it and, twirling on it with the stick, produces the necessary
[237] friction. After approximately half a minute, when the fine shavings rubbed off the board smoke, one shows on some dried cattle-dung. As soon as this starts to glow, one puts kindling on it. Once the fire is burning in one of the huts, the people come here from the others, a stick of firewood in hand, in order to fetch fire for themselves.
415 With the household equipment also belong the large leather pouches
482

372 ←

415 →

415 (Fig. 16 /<u>sic</u>: see Fig. 17/) (ni <u>benna</u>, ni <u>bennia</u>), which in
482 former times were loaded only on donkeys, but now are also carried by the women on their backs, just like the leather bags (e <u>mogge</u>, <u>moggeni</u>), when they set out to buy vegetables.

[illegible]

[illegible] Thus consists of curves, series of circles, lines and scallops, which are painted on the shield's surface in three colors. Pampaites red, black, and gray (1).

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /[illegible]/ serving as the background color for the shield's surface, from which the colored designs stand out in sharp contrast. One uses for this the red earth mixed with blood or with the juice expressed from the fruit of the *Solanum campylacanthum*, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black, pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

Today considerable confusion in the shield escutcheons already prevails. The more the war expeditions of the Masai become, thanks to European domination, the more the old formalities of warfare are dropped off, and ancient rules, which formerly were never transgressed, are today all too often ignored; their purpose has lost its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons to end of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

A shield escutcheon (Plate 1) may contain 1. the red warrior-emblem (*ne ayer' enjogi*), 2. the black emblem (*ne ayer' enaki*) (1).

1. To which the rare gray one belongs.

3. the ornamental band (*ne engira i ol ebek*), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

1. [i.e., the shield escutcheons--Analyst]

[illegible]

After a battle of the Mawri among themselves, the conclusion of peace is that the spectators, in the presence of a number of warriors of both parties, exchange their skin capes and medal things. This is called [illegible] or exchange of skin capes.

The length of the marches covered on war expeditions, in comparison to that of their neighbors carrying on agriculture, is often astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers, however, that the training of warriors consists only of marching, that, aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry troop. The tales of the caravan people relate miraculous things about the speed and endurance of the Mawri warriors, and even European travelers have contributed to the spread of this legend in that they compare the physical performance of the Mawri with those of the Europeans in the region. The unreliableness of such a comparison is obvious. One also often hears how the Mawri are admired for their alleged ability to be able to give up the drinking of water on their marches. Personally this rumor arose from the fact that these people, in contrast to other tribes, never carry a good bottle of water on their long migrations. The Mawri, however, know perfectly every little spot of the steppes, he knows every rocky basin, every tiny spring, he also knows where an apparently dry brook bed carries subterranean water. Where water has collected in old hollow trees, and especially in bushels, this is accessible to him through a series of steps made out of foot-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited by their water content to quench thirst. They serve him, [illegible] just as the wild honey, our subsequent in the steppes, also serves as food on the march. A cuckoo bird, the honey indicator (Cuculus indicator), called [illegible] by the Mawri, leads the Mawri to the concealed honey holes. As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

charcoal [illegible] gilim, [illegible] gaki. The charcoal, to give the height of a oven, is burned out of the wood of the trees [illegible] (Diospyros [illegible]), [illegible], [illegible], and a few others and then carried to the smithy in this sacks. A dome (or anvil : dome of forging) serves as an anvil. The hammer [illegible], [illegible], Fig. 31 (12)

1. See p. [illegible].

has the shape of a pestle, the lower end of which is somewhat compressed. Working with it is pounding, not hammering. The tongs [illegible], [illegible], Fig. 32 (1) /two features I shown/ consist of two parts that are joined by a pin mechanism. Their grip arms are long, the grasp arms short. The small striking chisel (Fig. 32 (2) /two features I shown/) [illegible], [illegible] has the usual shape. The bellows [illegible], [illegible] is [illegible] represented in two forms. The one very widespread in Central Africa, which consists of two central bags made of sheepskin or goatskin (Fig. 34), is the most common. In the lower end of each bag is stuck a wooden plug, like a stopper, through which projects an iron tube 30 centimeters long. In place of the latter there is also often a wooden tube, or for both bags together a forked branch hollowed out like a tube. On the upper, wide end of the bag two sticks are sewed on with small thongs so that they form the opening in a rib. The one using the bellows -- usually an old man or a woman -- grasps with each hand one of the two bags at the upper end, so that they, spread with the stretching of the bellows by spreading out the hands, let air enter. With the following pressing together of the bellows, by squeezing the sticks together, /Figs. 32-33 appear here/ one presses the air from sitting back again and drives it through the lower iron tube. Both iron tubes open into a clay tube [illegible], [illegible] lying in the fire. The two bags of the bellows are constructed in such a way that with the stretching of one the other one is squeezed together at the same time. The other type (Fig. 35) consists of a wooden bowl -- covered with skin for durability -- upon which is tied, astride, a leather bag that has a round hole on top. In using the bellows, one inserts here the thumb of the right hand and with it stretches the bag upward. With the compressing of the bag the hole is closed with the palm of the hand. Below at the side of the wooden bowl is found the air tube.

/108 cont./

[102] (without, however, one's being able to speak of steatopygia), robust
[103] hips, deep umbilical cavity. The lips must not stand out, either by form or color, so that thin and dark lips are considered beautiful. The tongue and gums an artificial black coloring is regarded as beautiful: [101] for this one uses the juice of Chrysobalanus icacaros (1).

[104]

1. Of women, girls of girls.

Prominent muscles in the upper arm and calf or a fat belly are regarded as ugly and are contemptuously compared with the like characteristics of the Negroes, or one also speaks mockingly of club arms, or calves with a goat muscle mark in them, or of a /109/ diseased swollen abdomen. Among girls one places value on small hands, small, narrow hands and feet, as well as even, hemispherical breasts. By means of painting with red earth one seeks to enhance [102] the dark skin color by the contrast of colors.

IV.

108 Weapons. -- Spear. -- Sword. -- Scabbard, belt, shield. -- Club. -- Bow. -- Arrow. -- Firearms.

41 The foremost weapon of the Ewoni is the well-known, beautiful, large spear /Ill. 41 appears here/ (Fig. 37, see pp. 108 ff.). It constitutes all the pride of the warrior, who would sooner part with anything but that. The spear consists of three parts: the /107/ upper iron blade, the middle wooden shaft, and the lower iron shoe. At the lower end of the blade and at the upper one of the shoe, respectively, one finds a socket by means of which these parts are [41] [42] stuck on the wooden shaft. The ancient spears had blades 70 centimeters long and 30 centimeters wide, with short sockets, a long wooden shaft, and a short shoe. Gradually the socket of the blade was lengthened up to 40 centimeters, and the shaft was shortened in the same proportion. Such spears are still to be found only rarely today, and then the blade on them has been ground more or less narrow in the course of the years. Later, fashion lengthened the

[TEXT CONTINUED ON PAGE 168]

/191 cont./ The beautifully worked scabbard (el tlacolín, A tlacolín) (Fig. 51 c and 51f) is made from gamuza or deer's hide and dyed with the red juice of the root of the herb of gravedoño (ra ñuu [illegible]).

2. Plumage ornaments

on the back side is found a longitudinal middle seam and on the front side a corresponding longitudinal fold. Twelve centimeters from the upper edge /192/ of the scabbard there sits on the front side an oblong eyelet (el ñlach, el ñyuuchi) through which the belt (el ñlachi, i ñlachi) (Fig. 51 b) were around the hips is stuck. The latter is made of deer's skin and decorated with several longitudinal folds. There is a hole (ra ñukuu, a ñukuu) at one end, and at the other one a small leather strap (ñiy ñuu, ñy ñuu). The sword is worn on the right side and drawn with the right hand. Left-handed men wear it on the left side. This carrying method serves to point to the fact that formerly the people did not carry swords, but daggers, for a sword can be drawn with the right hand better from the left side, whereas a dagger is more quickly ready for a thrust from the right. Moreover, the sword, even today, is also frequently handled like a dagger.

According to the traditions of the people, the original Mixtec shields were very small (shield = el ñlah). They had a circular, flat shape, a round undue in the center, and a diameter of 30 centimeters. The grip stick was fastened on the back side with small straps, which were drawn through the shield. The very light shield was carried with two fingers at the grip stick. Accordingly, the hollow of the undue was very small. Gradually the shields became larger, and the reason for this may be sought in the frequent conflicts of the Mixtec with peoples carrying bows and arrows. Since in its original shape, the shield, with its enlargement, lost firmness, this was increased in that a wooden frame (el dawiñ, el dadio) was sewed around the outer periphery with strips of goat or sheep skin, the shield was bellied out, and, to preserve the longitudinal concavity, two straps (a ñuchuu)

/139 cont./

were drawn from each end of the grip stick to the grip (Pl. 34). The present-day shields, like the former ones, are also made out of buffalo or giraffe skins. For better protection of the hand, the centre is lined with a round patch of the same skin, and, on top of that, in order to prevent the cleaving of the finger knuckles, with a piece of soft dorsphide. The shields now in use, measured with the curvature, are 1-1.10 metres long and half as wide. The ornaments is painted on the front surface of the shield, whereas the reverse side often -- not always -- bears the lineage coat of arms.

On the march the warrior carries the spear with one hand, the shield in the other one. With arm hanging down, the hand grasps the shield grip so that the smaller diameter of the shield is vertical and the painted surface is turned outward.

The club (si ghaka, si ghaka [Fig. 32]) is now made out of one piece, generally out of ordinary hard wood, especially from the tree si ciraka and si ulhorhawk (1):

1. Dregea rubicunda K. Sch.

only the clubs of the speakers, which serve solely for gesticulating, are made out of ebony wood or dracaena here. The old clubs /139/ consisted of two parts: the spherical head, into which the stickhandle handle was stuck through a central hand-hole. The club does not actually serve as a weapon of war; except for accompanying a speech, it is used almost exclusively in fights and -- to break narrow bones of slaughtered livestock. The present clubs are about 40 centimetres long, their head has a diameter of five to six centimetres. A clubhandle ruhgai (si ulhe), especially out of the wood of si galaniar (1).

1. Ochna kirkii Oliv.

often takes the place of the club. The club is worn in the sword belt; it sticks to it as a rule close to the sword, with the head upward.

/[illegible] cows./

28.1 The other skins, after they have been well dried and /[illegible]/ detached by scraping with a sharp ex, are covered by a vigorous rubbing with
• [illegible] a running scraper. The back of Tyrannosaurus Rexus rex. (Ancient Reg). (or hogs) is pounded and made into an scraper by being boiled in water. The finished leather is soft and pliable.
[illegible] Leather dressing is women's work. The scraped-off cattle hair is carefully hidden in the dung heap of the kraal, so that the cattle do not eat it and become sick from it.

29.1 The sole article of clothing of the warriors is the skin cape
[illegible] (a cape), (angkin) it consists of calf skins sewed together into a strip approximately 110 centimeters long and 64 centimeters wide. The entire strip of skin is folded over once crosswise, and of its four corners the two top ones, lying one on the other, are sewed or tied together. One puts the cape on by sticking the head and left arm through the hole lies on the right shoulder, chest, back, and left hip are covered, left shoulder and right hip leave the latter so that
[illegible] the sword found there is free. The spotter cape is the only article of clothing that is never dakoiled. The hair side is worn on the outside and, if carefully chosen to color, is often quite attractive, since only the silky-hairy skin of clover calves or a day or two old are used. Often the upper
[illegible] and lower edges of the cape are sewed with one or two rows of small red or white beads. Only very rarely is it also made
[illegible] of other skins than, the mother are two made out of that of the dark-green long-eared monkey(Cercopithecus ellipsiceph. Boys and men wear tied over the seat to the sword belt a three-cornered piece of leather to sit on (Fig. 30) (or gobona, or gobonati), made of ram's hide or cowhide, for protection when sitting, against the thorns and prickly spikes of the grasses scattered everywhere in the veldt. Boys wear a very short cape (or [illegible], a [illegible]), covering only the belly and back

Fig. 30

/[illegible] cont./

[301] [304] In order to make the ears suitable for holding ornaments, their lobes are pierced in early childhood with a strong wooden thorn and dilatated by the insertion of larger and larger wooden plugs. The

[314] [316] plugs (Fig. 40 a and b) are mostly made out of the wood of the

[316] red gulaschka tree (Cichus [illegible] ciliq), often quite beautifully

[illegible] carved. The weight of the ornaments enlarges the lobe will soon, so that they often hang down extended ten centimeters. In the same

[301] time the upper edge of the ear is also pierced in one or two places. In these the women wear bunches of five to eight small chains to 30

[319] centimeters long (Fig. 40c) the men wear just as many of simple

[314] (Fig. 41 [illegible]), a clock-key-shaped ornament made out of tin (Fig. 40 a and c) or out of brass wire (Fig. 40 b), often also a pear or a wire ring, a polished enamel disk, which ornament /[illegible]/ is called [illegible] (Fig. 40), or a wooden stick 10 centimeters long ([illegible]), [illegible] (Fig. 47, upper part)), or a quill of the porcupine (white or [illegible]). Around the lower part of the enlarged ring of skin of the ear lobe the men wear a tube four centimeters long ([illegible] (Fig. 47)), wound out of thin iron wire. /(Figs. 47-51 upper bend' shown and rods are wrapped with copper wire, while on the end of the rods usually hang small chains 8 to 30 centimeters long ([illegible]). If these are only short, they are on a rule glued together with red paint (Fig. 40). In place of this ornament one also often wore an oval,

[301] perforated tin disk ([illegible]) and other things, or a nut-shaped ornament that /[illegible]/ is carved out of the nut of the Hyphaene palm (Fig. 40). 302 714 couples, whereupon the ends of the strands are wrapped with bast to the length of an inch. The back hair, lengthened up to 24 centimeters, is placed around a four-long stick and on this wrapped tightly with bast or goat leather wrapped thin, so that it forms a stiff braid (si dalpa) reaching to the waist. Over this braid one not infrequently finds one to three smaller ones. Often the ends of the little couple beside (mag. si balanda si balaud | ml gaeche) are joined with that of the little forehead braid (si balanda | ml gamum) and the former tied together under the chin with a string (tanda of fibers) (1).

[P21]

[P51]

1. This hair style has the purpose of protecting the head from the harmful influences of the sun's rays. For that, one first let the hair grow long and, since the long strands fall annoyingly into the face at every movement, put it together into braids. The Toraja helped themselves more simply, in that they shaved the front part of the head and left the protection of the thick padding of hair at the back part of the head.

[P71]

302 The hair is often perfumed with the rose powder of si lo tindoka (Cassia spec.). /141/ /Fig. 43 and 51 appear here./

• [P24]

/142/ The white facial painting of the newly circumcised has already been mentioned. Younger people, especially warriors and young girls, on all festive occasions, smear the entire body (under as it is not clothed, with red paint, which they like to perfume with the pulverized leaves of si magirigiriki (Lagerstroemia Rich.), which smell like vanilla. With one finger the warrior then often scrp it off the skin lesses in serpentine lines (si bigeeka, si bigeeka), so that a kind of drawing is produced. One who has killed an enemy in war paints his body at the following dance festivals with white and red earth in stripes (Fig. 67). This painting is called ss /Figs. 67-69 appear here/ ginulgual. At festivals one also often sees on the face of the warrior a red triangle, its apex starting at the alae and widening out up to the middle of the cheeks (Fig. 68). When boys

302 (951) and girls, warriors and women (men, however, old men and women) come into a region in which they have not yet been, they paint their faces and chests with its earth as protective magic against (531) sickness and misfortune in this new land. The women paint the face on both sides with two concentric rings on the cheeks, or with two or three lines running parallel, which run from the corners of the mouth vertically to the eyes, then go around these in an outward curve, /151/ and turn vertically upward over the outer corner of the eyes (Fig. 63 a and b). One uses for this the juice of the root of si gwenadun: or dojo-plant (Plumbago ceylonica), mixed (314) (316) with Fresh Blood.

/[illegible] cows./

[illegible] A little manual help is given. As soon as the cow has been, due to hard labor by a few people, where grasp the legs of the calf coming forth and pull it out. Then is a drink against the belly of the cow a few times, so that "she will love it," and then drink on the forehead with the palm of the hand, so that "it will quickly go to the udder and eat."

[illegible] Swellings on cattle, for healing, are smeared with the glowing ashes of an [illegible] of goat (Solanum spec.).

[illegible] Injuries to the feet of the cattle and goats are treated by a thorough washing with hot water and subsequent anointment with cattle urine, as is a sort of foot or leg pulley, which /[illegible]/ frequently appear when the cattle stand for a long time in mud and dirt during the rainy season. One tries to cure ailments of donkey heels by placing the hoof on a stone heated very hot and holding it there for a few moments.

In describing the general ailments of livestock I am relying chiefly on the statements of the Masai, since only occasionally did I have an opportunity to make observations on cows, [illegible], etc.

[illegible] For coughs (dry [illegible]) the cattle are given a thin soup consisting of milk and pulverized, charred [illegible]. Of chicken [illegible] cures diarrhea in cattle. The infusion of a decoction of of [illegible] bark (Sesbania sesban) for cattle acts beneficially on the stomach and cavitively on the birth organs. To loosen the afterbirth after a miscarriage, one gives the cow an infusion of a root decoction from the of [illegible] of [illegible] (a Euphorbia).

For eye inflammation one spits milk into the eye of the cow and rubs it in it, or one drips into the eye the juice of the of [illegible] [illegible] (Helianthemum [illegible] Vitis).

An epidemic disease among young calves, which is supposed to lead rapidly to death, is called of [illegible] or of [illegible] by the Masai. As the cause of the ailment they cite the eating of a certain bush as well (Pennisetum ciliare) and as symptom swelling of the lymph glands, which they often try to heal by cauterization (1).

1. In all the meat and fatty parts of the sacrifices

/[illegible] cases./

For the leaf and mouth disease of cattle (or [illegible]), which is recognized by sores on feets, in the mouth, and on the tongue, one [illegible] known to cousing the leaf sores in the manner described above.

A useful description of the feets — of [illegible] sickness — the blood cases to the fact that the dirty animals have sores the of [illegible] feet (Complete [illegible]). In the fat sewers this feet dries up, and the cattle do not eat it any more, whereupon then the ripe of the feets are said to drop off sees by themselves.

For coughing (dry cough), gram and dung are given a decoction of [illegible] feet to drink.

The eye or [illegible] (eng ge = [illegible] tongue, [illegible] = feet) of gram and dung is a disease rapidly leading to death, whose symptoms are fever, cough breathing, and a distended belly. No remedy is known. The microscopic examination (3)

1. By [illegible] /[illegible] /Dr. Brown.

of blood slides showed that it is a cases of pulmonary edema caused by the infestation of dust containing anthrax spores.

One time to case — usually to rain — a [illegible] rain of gram and dung (eng ge sawa) by means of red hoard stones that go from the sun along left side of the body to the sun. With dissection parasite stones are found in the stomach.

With eng ge ek gatth (or gatth in any small envelope), which affects only gram, the eyes stand out strangly. For the case are [illegible] between in the receptae and ripe fat for into the eyes. Popular belief arises concerning the cause that the animals, during [illegible] exercise for fodder plants, had breathed in the dried excrement of these envelopes.

For sewer Eardsawa, from which gram and dung also suffer after an excessive eating of fresh grass, one punctures the belly with a sewing owl to let out the gases.

[illegible]

233 The foliage of the of pot | of dogs-tree (*Cornus florida*) 234 that is, one of the dockeys, is regarded as poison for dockeys. 235 Besides a benefit, of grubs | of vegets. Thus when how the 236 dockeys horses in the pasture are stricken beyond recovery, the blood 237 also fear for dockeys and cattle the cause by (*Cimetes monteiroi*) which they call as dockiles. The horse is allegedly only dangerous 238 to cattle if a hole flies in the ey of the tongue. One seeks a cure 239 by sweetening the ipse horses, but the result is very doubtful.

For getting rid of fleas, use cotton-pining livestock with an extract from the crushed plants of of white goat (*Asclepias geyeriana* L.) or from of shot (*Asclepias tuberosa* spec.).

The powdered root of of goat (*Asclepias perennis* WIDE.) is blown into the nose of calves and small livestock, in order to drive out the maggots of the dosse fly /*cuterebra fly*/.

233 234 Cowbells (Fig. 77) in the farm relationship in Europe are found generally, but here they are hung especially on cows and only on those cows that do not tolerate their calves. Smaller bells, often

Fig. 77. Fig. 78.

of wood or sheep horn with wooden clappers, are worn by castrated 233 sheep and goats. An adornment one hangs around the neck of castrated calves clapper-shaped pieces of ivory (Fig. 78) or, for especially handsomely developed cattle, a leather band or a cord stitched with cowrie shells.

[illegible]

that I give a gentle rub with a bendible medium of the index finger into the scapt of the child."

[illegible] In order to hasten the exit of the afterbirth, one of the assisting women tries to procure labor-pain activity by tickling with a feather the palate of the woman giving birth. This manipulation is also used in rare cases during the periods of the preliminary and of the actual labor pains. During the afterbirth period the child's umbilical cord is removed. In that the umbilical cord (ta ikmal) is first cut close to the body with a cord of bark bast and then cut at a place on tath away from the body with the instrument otherwise serving as a razor, the ol [illegible]. A navel bandage is unknown. The afterbirth, which is not the object of superstitious customs, is [illegible] into the livestock bowl by the midwife in some disregard, buried there or right in others.

The newborn child is cleaned by a rubbing with liquid fat. According to statements of the people, this treatment, however, is supposed to represent not so much a cleaning as a strengthening and comfort. Then the child is laid beside its mother on a soft leather skin freshly greased. As soon as the latter has recovered from the birth act, she chews few grains of ol odoe (Monna lanceolata) and gives the child an extract of these as a purgative. On the following day the newborn child is given its first bath, consisting of a rapid extract of the twigs of ol gaiwuat (Phyrella minima L.) and the stalk of nig ahwuiyi (Commiffora spec.), to which is ascribed the action of a protective magic against sickness. Cold baths, say, for the purpose of hardening, are unknown. The child remains unclothed.

The woman in childbed leaves her hut on a rule as soon as her condition permits, which is usually already the case on the following day. The medicinal treatment consists first of all in the administration of laxatives, for which in this case a mixture made out of liquid fat, honey, engpe salt, and a few pounded ol odoe corns, as well as a leaf infusion of ne ainti (Grewia bicolor Juss.), is especially prized. Furthermore, she is given a leaf soap seasoned with ol ejiele bark (Calotrop mitotica Brongn.), as well as a decoction of ol gabaw i o gaiwa (Sphaeranthus microcephalus), a leafy sweep plant, or a leaf infusion of ol odoat (Spatha gerlegina) or also a decoction of

(Cont cont.)

353 bring back the milk secretion by a copious drinking of liquid deep fat. Meanwhile the child is nourished with cow's milk.

797 For pain in the breast (at gonad) and in the vestige (or uterus), or chill the woman drinks a rare decoction of of [illegible] (Cercis [illegible]).

To induce an abortion, the one concerned drinks a decoction of dried gear [illegible] or a strong decoction of [illegible] (Cercis [illegible]) or of [illegible] root. During the subsequent two or three days of convalescence she takes a weak decoction of of [illegible] back or one of the back of of [illegible] (Cotyledon [illegible]).

163 Concerning fertility, the relationship of the sexes, and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 17. The 97 old women questioned had given birth to 848 children all together, which gives an average of 8.8 confinements for one woman. Of these, 395, therefore 46.5 per cent, were boys, 373, therefore 43.8 per cent, girls. Before their circumcision 36.7 per cent of the children died, including the stillbirths.

It should also be mentioned that the realization of a twin pregnancy is regarded as having arisen through one conception.

/208 cont./

782 bestrew the individuals with the blades of a fodder grass prized for cattle, and say the prayer. This runs: 'Ng ai pasinai, nja ijōk ñ gischu, jo ijok ñ gischu kumok, ninĝua ijōk ĉiolonga = may God give us cattle, give us many cattle, keep us healthy. While driving the captured livestock together, they sing a song of praise, which begins with the words: Hai narok, oho, Hai kindera ije oh = black God, oho, we hurry near, oh!

In sickness, both the patient and his relatives pray for health for him. In serious cases of illness a black ram or a black ox is slaughtered, and part of its blood is poured on the floor as an offering to God. If the sick person is an old man or an old woman with numerous descendants, one slaughters a likewise black, gravid cow, whose calf is left lying outside the kraal for God, after the place has been sprinkled round about with the amniotic fluid.

796 Both in order to honor God and at the same time to supplicate
782 him for something, the Masai celebrate feasts at approximately monthly intervals; these usually take place on moonlit evenings, more rarely they start in the morning or early afternoon.

One of the most frequent supplication feasts (ol ogŏr = the supplication feast) is the ol ogor l ol geretti, which during some periods and in some regions is celebrated almost every month, in others at considerably greater intervals, by the married men and the boys together, in order to supplicate God for the preservation of the health of human beings and livestock. In the kraal a large fire is kindled
[372] with dry wood (from the ol oirien tree), upon which green wood with
[824] leaves (from the os segi tree) (1)

1. Cordia quarensis Gürke.

is tossed, so that a strong development of smoke comes about. A
[824] powder made from the wood and bark of the ol mogoñgora liana, which smells like incense, is sprinkled in the fire. The thick column of smoke climbs toward the sky and takes the fragrance to God. Now one leads up a large black ram, washes it carefully
[824] with honey beer, and sprinkles it with the powder of the e matañguju tree. Then it is suffocated, drawn, and cut up. /209/ Each of the

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always: I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. [272] [237] [415] [824] [539] The people of the kraal gather in the evening and, from a buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

/211 cont./

789 amatory adventures. The powder also serves as love magic, in that
[832] the woman sprinkles herself and the man with it, through which his love for her is heightened. If a woman loses her first child soon after birth, she hangs in the doorway of her hut during her next pregnancy an amulet that consists of a few cowrie shells sewed on a small piece of leather and a little bag, made by the ol goiatiki, containing sawdust to protect the expected child from sickness and death. The
[824] plants preferred by the ol goiatiki for the manufacture of his magic medicines are: en gaitetojai (Commelina Merkeri K. Sch.), ol kioge (Courbonia virgata), en gujene (Cyathula Merkeri Gilg), ol assassiai (Osyris tenuifolia), os segi (Cordia quarensis), ol debbe (Acacia Merkeri Harms), en gadardar (Ochna Merkeri Gilg).

754 The belief in the evil eye, which makes human beings and livestock sick, is also generally widespread. One afflicted with the evil eye (erta gonjek) may not let himself be seen in the vicinity of the kraals. He is anxiously avoided by all people and therefore builds a kraal of his own, in which he lives alone with his family. If he ventures to enter a strange kraal, he must be prepared to be killed. If a human being or a head of livestock suddenly falls sick or dies without one's being able to explain this by natural causes, it is often believed that the reason for it must be sought in the doings
[784] of an evil sorcerer (ol osukutoni). Only if such a one has not been in the vicinity for a long time is the misfortune traced back to a punishment from God.

/352/

Appendix I.

824 "Masai pharmacological" and other notes about the plants regarded by the Masai as having therapeutic, useful, harmful, or other effects.

1. ol ɣbaí (Microglossa spec.). To get rid of fleas, cattle, especially calves, are washed with an extract of the leaves.

2. ol ɣbɪlɪsɪs (Dodonaea viscosa L.). The chewed end of a small piece of twig serves as toothbrush.

3. en aboloña (Eragrostis tenuifolia Hoch.). A grass particularly valued as rich fodder for sheep.

4. ol ɣdɪbɪ (1)

> 1. In abyssinia the ripe fruits are dried, powdered, and then used as soap; in the dialect of the Tigre province the plant is called schiptí.

(Phytolacca abyssinica Hffm.). The leaves of this shrub serve as fodder for small livestock.

5. ol adjai. Fodder for small livestock.

6. ol agaramöni (Crossandra nilotica Oliv.). The chewed herb is placed on swellings and is supposed to act as a resolvent. The juice is dripped on lues sores to heal them.

7. ol aibɛriai (Cyperus spec.). The grass is used to cover the huts and is regarded as middling cattle fodder.

8. en aibɪrɔ ń gob (Portulaca quadrifida L.). Good fodder for small livestock.

9. ol aibɪro ń gob (Ocimum spec.). Good fodder for small livestock.

10. en aibor buguri (Oldenlandia capensis L.).

11. en aiñoñondgo (Melothria tomentosa Cogn.). It is popularly used as padding for the bed, since the smell of the plant keeps bugs away.

12. en aigusugus (Tricholaena rosea Nees). Good fodder grass for cattle.

/352 cont./

824

13. eng airascharasch (Crotalaria striata D.C.)

14. ol airascharasch (Crotalaria labumifolia L.). The consumption of this plant is supposed to produce a morbid elongation of the feet or hoofs among cattle and donkeys.

/353/ 15. ol airascharasch l eñ gare (Desmodium paleaceum Guill. et Perr.). The consumption of the plant is supposed to have the same effect as that of the previous one.

16. ol airascharasch l os sobugo (Crotalaria spec.).

17. ol airembai l eñ gare (Lemna spec.). The duckweed to be found everywhere in ponds and pools.

18. ol aisai (Cyathula Lindoviana Vlks.). The dried and pulverized root, stirred in water, is taken as an emetic for the fever of colds (ol oirobi).

19. ol aisegerai, also ol aisegirai and ol aisigirai (Heliotropium zeylanicum Lam). For eye inflammation the expressed juice of the plant is dripped into the eyes of cattle. Fodder for small livestock.

20. ol aisegerai kitok (Heliotropium Steudneri Vtke.). Is used like ol aisegerai.

21. ol aisegerai l eñ gare (Verbena officinalis L.). To hasten healing, the juice is dripped onto minor wounds, especially cracks, etc. on the feet.

22. ol aiseramai (Toddalia aculeata Pers.).

23. eñg aitetojai (Commelina Merkeri K. Sch.) (1).

1. Described by K. Schumann.

Commelina (Eucommelina) Merkeri K. Sch. n. sp.; gracilis parce ramosa caulibus sulcatis pilosulis, pallidis; foliis angustissime linearibus attenuato-acuminatis minute pilosulis vagina valde ampliata laxa; inflorescentiis pluribus, spatha acuminata basi rotundata ciliata et extus villosa haud clausa suffultis, paucifloris; floribus longe pedicellatis violaceis; sepalis oblongis; capsula trivalvi loculis ventralibus dispermis, dorsali monospermo, fragili papyracea; seminibus applanatis trilobis pallidis.

/353 cont./

• 824

The plant is about 40 cm. high, the dried stalk is not even two mm. in diameter, is yellowish gray. Like-colored are the leaves, 6-13 cm. long and two mm. wide; the sheath is 2-3 mm. long, 5 mm. in diameter, and at the base has deep violet running over it. The spathe is two cm. long and eight mm. high. The blossom has a stalk three cm. long. The fertile stamens are 11 mm. long; the twisted pistil, violet at the tip, measures 1.5 cm.. The yellowish seeds are three mm. wide and 1.3 mm. long.

Masai steppes: south and west of Kilimandscharo and Meru (Merker).

Native name: eńg aitetojai.

As the nature of the seeds shows, the plant is merely related to C. trilobosperma K. Sch.; but it is distinguished by still narrower leaves, by broader, not long tapered, and hairy spathes.

An ingredient of the secret medicine of the ol oiboni. Adults drink water in which the pounded herb has been steeped, as protective magic against illnesses of all kinds, and sprinkle it on children's faces for the same purpose. With the same intention one places the stalk of the plant in the first bath water of the newborn child. For colds, people drink a diaphoretic tea made out of the stalks. The plant is also valued as fodder for small livestock.

24. eńg aitetojai kete (Aneilema Johnstonii K. Sch.). Used in the above way.

/354/ 25. eńg aitetojai kitok os sobugo (Aneilema aequinoctiale Bth.). Fodder for cattle and small livestock.

26. ol alili (Acacia nov. spec.). Two handfuls of bark are leached out cold; the extract is drunk as desired by the warriors at the ol bul meals, on account of the digestive effect attributed to it.

27. ǎlǒmǒ (Senecio discifolius Oliv.);

28. ol ama (Ximenia americana L.). One eats the fruits, which

/354 cont./

• 824 are very sour, but pleasantly refreshing on marches through the steppes. For diarrhea one drinks goat-meat broth in which pieces of the root of ol ama have been boiled. For the same purpose one also drinks a cold extract of the root bark. A root decoction is added to the liquid fat (of cattle, sheep, and goats) particularly popular as a tonic for the sick, in order to prevent the diarrhea that the consumption of such quantities of fat easily causes.

29. ol amai. The decoction of six finger-sized pieces of root bark are drunk for severe diarrhea.

30. eńg ambalagai (Schimdtia quinqueseta Benth.). This grass is feared because the livestock is said to become with diarrhea and loss of hair after eating it.

31. ol amboschi (Momordica cardiospermoides Kl.). The juice of the large above-ground tuber is drunk as a diaphoretic remedy for the fever of colds (ol oirobi).

32. ol amelǒki (Cadaba farinosa Forsk.). Fruits edible. The bush is regarded as harmful for cattle, but as good fodder for donkeys. To cure anthrax carbuncles the goat-ulcer-sickness of the Masai (eńg ęa ol dododoi l en dare), one drinks a root decoction to which some fresh blood or honey is added as a taste corrective.

33. ol amemǵrua (Fribulus terrestris L.). The plant is feared for the feet on marches, because of its thorns.

34. ol amerǒri. A root extract, mixed with a little milk, is drunk for diarrhea.

35. ol amǒra (Ocimum suave Willd.). The leaves are sometimes mixed in with the chewing tobacco; snuff is often mixed with the pulverized bark.

36. ol amriake. Fruits edible. The unripe fruit is eaten as medicine for bronchial catarrh.

37. ol amulul (Faurea arborea Engl.). Cattle sick with e' bujańgat are given an infusion of cold leaf-extract of this parasite plant as a means of cure.

38. ol andanogi (Hoslundia verticillata Vahl.). Fruits edible.

39. ol añer 'n jaua l ol dorut (Panicum colonum L.). The grass is regarded as excellent milk fodder, which is expressed in its name, through the comparison of the udder (= en jaua) with a pool (ol dorut).

/355/

824 40. ol ĩnjaru (Cyperus). The three-edged sedge is regarded as good cattle fodder. Children eat the roots.

41. ol araba (Sporobolus festivus Hochst.). Good fodder grass for small livestock.

[302] 42. ol ĩr kidoñoi (Croton.). It is popular to sprinkle the hair with the fragrant root powder.

43. ol ǎsǎjĕt (1)

1. Also called ol aduerai.

(Withania somnifera [Z]. The root is chewed as an emetic for snake bite. For conjunctivitis one drips into the eye a cold extract of leaves previously crushed.

44. ol asambalan (Scilla Hidlebrandtii Bak.).

45. ol asasiai (2)

2. ol asasia l os subertai is also mentioned because of its healing effect for rheumatism.

(Osyris tenuifolia Engl.). Secret medicine of the ol goiatiki. In some places a decoction of ten finger-sized pieces of root, mixed with milk, is drunk for gonorrhea. For rheumatic pains in the back one drinks a root decoction that is sweetened with honey. The woman in childbed, soon after delivery, is given a root decoction, to which fat is liberally added, as a tonic and to promote milk secretion.

46. ol aseramai. The fruits are edible.

47. ol atu ischu (Barbacenia tomentosa Pax.). If it is believed that the cow has pain in the udder, the latter is smoked with glowing twigs.

48. ol aiischǎn (Grewia spec.).

49. ol ǎuhĩ (Adenia Volkensii Harms).

50. em bǎ ol ñodjine (Andropogon contortus L.). Good fodder grass, but feared for the eyes of cattle during the blossoming stage, because of its sharp, stiff spikes.

/355 cont./

824 51. em balagai (3)

3. Panicum maximum Jacq. is also called this.

(Panicum laetum Kth.). Good fodder grass for cattle, especially valued for calves.

52. em balagai nadua (Panicum and Digitaria). Regarded as not as good a fodder grass.

53. em balagai os sobugo (Panicum and Ptychophyllum). If cattle eat the grass, they become sick with eng ɛa oñ godjit.

54. ol baña (Plantago palmata). Fodder for small livestock.

55. em bañgalɛ́ (Cardamine africana L.).

56. ol bararuai (4),

4. Derris violacea (Kl.) Harms was also designated as ol bararuai.

also called ol bariroi (Lonchocarpus Bussei Harms nov. spec.). A mouthful of bark bast is chewed morning and evening as a means of loosening catarrh. For the same purpose a decoction of the bast in meat broth -- especially of goat's meat -- is drunk.

57. ol bau (5)

5. ol bau and the e' sube os sobugo mentioned later are different local forms.

(Andropogon Sorghum var. effusus Hack.). Reedlike, thick, /356/ good fodder grass; valued especially in the dry season, because it stays fresh a long time.

58. em bɛ̀mbɛ́. Good fodder for small livestock.

59. em bere e baba (Asparagus africanus). On the day of circumcision, before the operation, the boys wash off their bodies with an extract of the leaves of the climbing species of Asparagus. I did not learn anything certain about the reason or purpose of the custom.

M /356 cont./
• 824

60. em bere ei gob (Adiantus hispidulum Sw.).

61. el beres (Panicum horizontale Meg.). Good fodder grass.

62. ol beres l ol obe kidoṅoi. Good fodder grass.

63. em berěsí (Pappophorum abyssinicum Hoch.). Good fodder grass.

64. ol berěsí (Chloris virgata Vw.). Good fodder grass.

65. em berěsí l em bugúi (Panicum spec.). Good fodder grass.

66. ol berěsí l en diamutu (Sporobolus robustus Kth.). Good fodder grass.

67. ol berěsí l eñ gare (Panicum spec.). Good fodder grass.

68. ol berěsí l e' rube (Chloris virgata Sw.). Good fodder grass.

69. ol beresí ol obe kidonoi (Sprorbolus indicus [L] R. Br.). Good fodder grass.

70. ol beresi 'ajugi (Andropogon ischaemum L.). A very good fodder grass, which is valued so highly that the people often actually regard it as a preventive against sicknesses of livestock.

71. ol beresí was (Chloris myriostachya Hochst.). Good fodder grass.

72. ol bibiai. Reed mace.

D
[824]
73. ol bibiai ado (Leonotis mollissima Gürke). Honey plant valued by the El dorobo.

74. ol bibiai kete (Leucas Neuflizeana Courbon.). (1).

1. Also called en dialoṅo.

Likewise.

75. ol bibiai l ol muáte (Leonotis nepetifolia [L.] R. Br.). Likewise.

76. ol bíli (Commiphora spec.). The honey pots (ol ulul) are made from the wood of this tree.

77. ol boboṅi. Candelabrum euphorbia.

78. ol bolboli is the designation for Oncoba spinosa Forsk. and Cucumis methuliferus E. Meg.

79. ol bolboli kitok (Sphaerosicyos sphaericus Cogn.). The plant commonly grows in abandoned kraals.

/356 cont./

• 824 80. ol bomboi l en dare = goat bean (Vigna /one species is the cowpea/). Goat fodder.

81. em bos togoia (Heliotropium stirgosum Willd.). Fodder for small livestock.

82. ol bugoi (Terminalia Brownii Fres. var. Merkeri Engl.). The decoction of two handfuls of bark, without any additive, is drunk for diarrhea; with a strong addition of fat, for dysentery. The [281] pulverized bark is further used as tanning bark for tanning.

/357/ 83. em bugui (Dactyloctenium aegyptiacum Willd.).

84. em burengele (Orthosiphon australis Vtke.). Regarded as rich fodder for sheep.

85. ol burtian kitok (Plectranthus panganensis Gürke). Very succulent and hence thirst-quenching fodder for small livestock.

86. ol burugoi. Bows are made out of the branches.

87. ol burugoi l en gob (Sida ovata Forsk.). Good fodder for livestock.

88. ol buruguai l en gob (Hermannia spec.). Fodder for small livestock.

89. en dagulgdi (Gomphocarpus lineolatus).

90. ol damau (Asclepia Phillipsiae N. E. Br.).

91. en damedjoi = ol adjai. Fodder for small livestock.

92. en dinewis (Conyza stricta W.).

93. ol debe (Acacia Merkeri Harms and Acacia hebecladoides Harms nov. spec.) (1).

1. Described by H. Harms.

Acacia hebecladoides Harms n. sp.; ramulis molliter tomentello-pubescentibus; foliis breviter petiolatis, petiolo communi nec non pinnarum rhachi breviter hirsuto- vel villosulo-puberulis, pinnis 4--7-jugis, foliolis circ. 10--20-jugis, anguste oblongis, nervo medio subtus prominulo fere centrali, obtusiusculis vel acutiusculis, fimbriatulo-pyberulis usque subglabris; spinis stipularibus brevibus paullo recurvis, tomentellis;

/357 cont./

824 /footnote 1 continued/ pedunculis numerosis fasciculatis, breviter villosula-puberulis, involucro infima parte pedunculi affixo; capitulis subglobosis, calyce margine brevissime fimbriatulo.

Twigs with loose, short, somewhat feltlike, soft hair. Leaf spindle 4-8 cm. long, with loose, = squarrose hair; pinnae 2-4 cm. long. Capitulum stalk 2.5--3 cm. long.

Masai steppes (Merker 1902).

Native name: ol débe.

The variety is obviously (Since the involucrum is at the base of the pedunculus) closely related to A. hebeclada DC. and A. abyssinica Hochst.; only when the pods are known will one be able to state more exactly its position with regard to those two species.

A. Merkeri Harms n. sp.; ramulis glabris, cortice subflavidulu-cinereo obtectis; foliis breviter petiolatis, petiolo communi nec non pinnarum rhachi sparse adpresso-puberulis usque subglabris, pinnis 3--4-jugis, foliolis circ. 8--15-jugis, anguste oblongis, glabris; spinis stipularibus brevibus, glabris; pedunculis paucis 2--3 fasciculatis, argenteo-sericeo-villosulis, satis brevibus, involucro sericeo infra medium pedunculi affixo; capitulis subglobosis, calyce argenteo-sericeo.

Only one twig is available; it is bare, with light, yellowish-gray bark. Leaf spindle 4--5 cm. long, pinnae 2.5--3 cm. long, small leaves 5--6 mm. long, 2--2.4 mm. wide. Capitulum stalk approximately 1--1.5 cm. long.

Masai steppes (Merker 1902).

Native name: ol débe.

M
824

/357 cont./

/footnote 1 continued/

This species is striking because of the silky sheen of the hair of the capitulum stalk and calyxes.

Inflamed eyes of cattle are washed with a decoction of extract of the bark bast for healing. Furthermore, secret medicine of the ol goiatiki.

94. ol darboi (Kigelia africana Bth.). The paste obtained by boring out scrapings of fresh young fruits is placed on wounds. /358/ A small piece of boiled fruit is placed in the fermenting honey beer to hasten fermentation.

95. ol děbělěgi (Grewia spec.).

96. ol deběsi (Acacia verrugera Schwfth.). The decoction of a hand-sized piece of bark (dose for one or two days) is drunk for gonorrhea until a cure is produced.

M
[301]

97. ol degǒm (Cardiospermum halicacabum L.). The black, almost pea-sized seeds are strung on a string like beads and worn by the women as an ornament around their necks.

98. ol degoṅ.

99. en děliěmět (Sesamum angustifolium [Oliv.] Engl.).

100. ol děmělůů (Solanum setaceum Damm., Solanum Schumannianum Damm.). The decoction of about ten finger-sized pieces of root is mixed with meat broth and drunk to cure the ol dododoi l en dare sickness.

101. en děmĕschŏ. Warriors like to drink a bark decoction in meat soup as an aid to digestion.

102. en děmůmůů. Good fodder grass.

103. en demunjua (Pennisetum spec.). Good fodder grass.

104. ol děrĕgĕll (Strychnos heterodoxa Gilg). The decoction of a square inch of bark is taken to get rid of taeniae and ascarids.

D
[824]
[231]

105. en děrĕwĕnj (Setaria verticillata P. B.). The burs are used by the El dorobo to make tight beehives that have become leaky.

106. en děrĕwĕnj ol godjita. Good fodder grass, especially for cattle.

107. en děrĕwĕnj on gēg.

/358 cont./

• 824 108. en dĕrĕwĕnj os sobugo (Triumfetha rhomboidea Jacq.).

109. ol dĕsa (Microglossa oblongifolia Hffm.). Arrow shafts are made from the branches. The inflamed eyes of cattle and the ulcers caused by horseflies -- especially also by Dermatobia noxialis -- are washed out with an extract of the leaves.

110. ol dĕsĕgon (Pluchea Dioscoridid Dec.). A grass feared for the eyes of the livestock because of its sharp spikes.

111. ol dĕsĕgon kĕtĕ (Vernonia brachycalyx O. Hffm.).

112. ol dĕsĕgon l eñ gare (Laggera alata D.C.). The twirling sticks (ol biron, el biroñdo) of the fire lighter are made from the branches.

113. ol dĕsĕgon olbor (Microglossa volubilis D.C.). Same use.

[271] 114. ol dĕwŏ (Sarcostemma viminale). The Plant is chewed as thirst-quenching on marches.

115. en dĭăgŏlĕ (Lactuca capensis Thbg.). Fodder for small livestock.

116. en dĭăměschŭ. Warriors like to use the branches to make bed padding on marches.

/359/ 117. en dĭăměnjŭă or en dĭăměnjŭă (Pennisetum spec.). Good fodder grass, especially for cattle.

118. en dĭăměŭtŭ (Sporobolus marginatus Hochst., Sporobolus spicatus Kth.). Good fodder grass, especially for cattle.

119. en diăti osila (Amaranthus viridis L.). Fodder for small livestock. The El kuafi, as well as the Negroes, prepare a spinach-like vegetable from the young leaves.

120. ol diăti l eñ gine (Jussiaea acuminata Sw.). Fodder for small livestock, especially for goats.

121. en diăti naibor (Chenopodium nuwale L.). Fodder for small livestock.

122. en diăti os sobugo (Trianthema pentandrum L.). Livestock fodder.

123. ol dibiligwa (Psychotria spec.). The shrub is regarded as harmful, its fruits as immediately poisonous for small livestock.

124. ol dibiligwa ate (Pavetta spec.).

125. ol dimuai (Commiphora spec.). Rubbing with the oil of this tree is used for the parasitic skin eruption called el bebedo.

/359 cont./

824 [252] 126. ol dimigomi (Pappea capensis Eckl. et Zeyh.). About seven finger-sized pieces of the bark are boiled with the meat and fat of a fatty tail (of sheep); the warriors in particular drink the broth as Tonicum roborans /strengthening tonic/ and beautifying agent.

[252] 127. ol dinjai (Cissus quadrangularis L.). About ten finger-sized pieces of the vine are cooked with goat-meat broth. The broth serves as a stimulant.

128. en dobogi (Helichrysum foetidum [L.] Cass.).

129. en dodoio (Loranthus).

130. ol dirgoian. Edible root.

131. ol dogir (Cycnium). Fodder for small livestock.

132. ol doldoliai or ol doldoliin or also ol dondoliin (1)

1. Plectranthus panganensis Gürke was also pointed out to me as en dondolian.

(Blepharis linearifolia Pers.). Fodder for small livestock.

133. ol donjai (Senecio longiflorus D.C.). Fodder especially prized for goats.

134. ol donoroiñoroi (Poinciana elata L.).

135. en doroniki. The decoction of a fist-sized piece of root is drunk as a stimulant, that of a hand-sized piece of bark for severe intestinal catarrh.

136. ol dorotua (Rhoicissus erythrodes [Fres.] Pl.). The expressed juice is dripped into fresh arrow and spear wounds for healing purposes.

137. en dulie (Senecio subscandens Hoch.).

138. en dulele (Solanum campylacanthum Hochst.). The decoction of a fist-sized piece of root is given to the malaria patient as a diaphoretic remedy. To someone wounded by a poisoned arrow one give gives as an emetic /360/ a mixture of the juice of the fruits and the amniotic fluid of a gravid sheep.

139. en dulele en gare (Solanum). One smokes swellings on cattle with the glowing stalks of the plant to heal them.

140. ol dungul (Harrisonia abyssinica Oliv.). Edible fruits. The decoction of a handful of bark or root is used as an emetic for fever. The juice is dripped into suppurating wounds to heal them.

/360 cont./

• 824 141. ol dŭrgŏ (Cordia gharuf [Forsk.] Ehrenb., Cordia quarensis Gürke). The inflamed eyes of livestock are washed out with a decoction of root or bark. About three finger-sized pieces of the [847] root are chewed to induce abortion. The roughly pea-sized vermilion [262] fruits, called en gŭlŭlŭ, are edible. At times of food shortage they constitute the chief food in some El kuafi settlements, for example, in Nguruman, where this large shrub occurs very abundantly. The European, after eating a few berries, feels as though his lips were stuck together.

142. ol ĕbĕrĕtĭ (Phyllanthus kilimandscharicus Volkens). A person who has stolen a head of livestock anxiously avoids breaking off a twig of this shrub, since it is believed that otherwise the one robbed would soon recognize the thief as such. The twigs are used as goat fodder.

143. ol ĕbĕnĭŋ (Cassia obovata Coll.). A decoction of the plant serves as a remedy for stomach-ache for children.

144. ol ĕbĭtĭrŏ (Dolichos kilimandscharicus Taubert). Named after ol bitĭr = the wild pig, which likes to eat the plant. One washes young livestock with an extract of the leaves to get rid of fleas.

145. ol eboloña (Vernonia).

146. ol ebuloña (Eragrostis superba Peyr.). Rich fodder for small livestock.

147. ol ĕbŭlŏt (Bridelia cathartica Bert.). An extract of the pounded root is used as an aid to digestion and is therefore regularly drunk by the warriors at the ol bul meals.

148. en ĕdĕrĕgĕ (Psychotria fuscula K. Sch.). The sword scabbard is made out of the wood.

149. ol ĕdĭrangŏn (Pedicellaria pentaphylla L.). Good fodder for small livestock.

150. ol ĕdŭrŭt (Epaltes gariepina). During the first days after delivery, the woman in childbed is given a decoction of the plant, to which is attributed a favorable effect on the recovery of the birth organs.

151. ol ĕgĭsĭkŏn (Cissampelos Pareira L.). Pieces of root are worn [751] as amulets, mostly on the neck ring, for all possible illnesses, and, to be sure, both to prevent them and to cure them.

/360 cont./

• 824 152. ol ĕgŏgoia (Hibiscus micranthus L.). Shield hoops are made from the branches.

153. ol ĕgŏlĭa (Phyllanthus maderaspatensis L.). Good fodder for small livestock.

[262] /361/ 154. ol egororom (Duvernoia interrupta Lindm.). The berrylike fruits are eaten.

155. ol ĕgŭrŭgĭ = en dĕmĕschŏ.

156. ekum (Spilanthus Acmella L.). If the noses of little children, especially babies, become sore because of the flies that during the day are almost always sitting on the nostrils, the mother chews the herb and smears the sore spots with the chewed-out juice. The plant is chewed as a loosening agent for coughs. Moreover, the mother gives the baby afflicted with feverish bronchial catarrh the extract obtained by her from chewing a small piece of the pungent root, mixed with milk, to drink.

157. ol eleschua (Tarchonatus camphoratus). On account of its fragrance, ropelike neck rings are made from various parts of the plant, smelling strongly like vanilla.

158. ol ĕmbŭrĭasch (Andorpogon intermedius R. Br., var. punctatus [Roxb.] Hack.). The livestock in general does not like to eat the grass, which, according to the statements of the Masai, is not harmful.

159. en ĕmĕrĕgĕsch (Eragrostis superba Wawr. et Peyr.). Good fodder grass, especially for sheep.

160. ol ĕmŏrăn (Ocimum canum Sims.). The peppermint-like herb is powdered and used as snuff in the absence of tobacco.

161. ol ĕmŭdŏnol (Pelargonium multibracteatum Hoch.). Good fodder for livestock.

162. ol ĕndănŏgĭ = ol ăndănŏgĭ.

[262] 163. ol enda 'njugi. The fruits are eaten.

164. ol ĕngĭjĕbĕ (Duvernoia interrupta Lindm.). Good fodder for small livestock.

/ 361 cont. /

• 824 165. ol ěnjǒrio (1)

1. Designation of the El kuafi at Meruberg /Mt. Meru/.

(Pentas zanzibarica [Kt.] Vtke.). Older men drink a root decoction as a cure for rheumatism.

166. ol eňoroň (Orthosiphon Merkeri Gürke) (2).

2. Described by M. Gürke. Orthosiphon Merkeri Gürke n. sp.: caulibus erectis, 20--25 cm altis, ramosis, pubescentibus; foliis brevissime petiolatis, lanceolato-ovatis, basi acutis, margine crenato-dentatis, apice obtusis, utrinque pubescentibus, 10--15 mm longis, 5--10 mm latis; spicastris laxis, terminalibus, 6--10 cm longis; verticillastris 4--6-floris; floribus 5--8 mm longe pedicellatis; calycis extus puberuli labio superiore rotundato, marginibus subdecurrentibus, dentibus lateralibus triangularibus acutis, inferioribus longioribus, anguste-triangularibus, setoso-acuminatis. Masai steppes (Merker). Native name: el eňoroň.

[825] The herb, smelling strongly like peppermint, is burned on the hearth fire or in the hut doorway to repel the mosquitoes feared as fever-carriers.

167. en ǒoilín (Cycnium Herzfeldianum Vtke.). Fodder for small livestock.

168. ol ěrǎgǒdj (Toddalia aculeata Pers.). Fodder for small livestock.

169. ol eraĭ (Acacia cfr. arabica Willd.). The decoction of two handfuls of pounded bark is drunk as desired for diarrhea and is rightly regarded as very constipating because of the very high tannin content.

/362/

• 824 170. eng ĕrámrĕm (Senecio longiflorus D.C.). Fodder for small livestock.

171. ol ĕramrĕm (Cissus Oliveriana [Engl.] Gilg.). Fodder for small livestock.

172. ol ĕrbat (Achyranthes aspera L.). Fodder for small livestock.

173. ol ĕrbat kĕtĕ (Achyranthes spec.). Fodder for small livestock.

174. en ĕaĕrĕrimi (Cuscuta ontusiflora A.B.K.). Fodder for small livestock.

175. ol ĕsŭbĕnĭ (Helinus mystacinus [Act.] Hemsl.).

176. ol ĕtĭnŏk (Hoslundia verticillata Vahl.). Edible fruits.

177. ol ĕlĭgurŭrŏnĭ (Pavonia Kraussiana Hoch.). Fodder for small livestock.

178. eń gĕbĕlĭsĕs (Boscia coriacea Pax.). Edible fruits. The Shrub is regarded as prized fodder for donkeys.

179. eń gadardar (Ochna Merheri Gilg). Secret medicine of the ol goiatiki. Clubs and ear plugs are carved out of the hard, beautifully marked wood.

180. eń gallowai (Commiphora spec.). Fodder for small livestock.

181. eń gairĕtuai (Physalis minima L.). A few twigs are placed in the first bath of the newborn child as protective magic against sicknesses of all kinds.

182. eń galĕdjol (Oxygonum sinuajum [Hochst. et Std.] Bth. et
[291] Hk.). Fodder for small livestock. These sorrel leaves are eaten along the way as thirst-quenching.

183. eń galĕdjol ĕrĭtĭ eń gĕre (Oxygonum sinuatum). The stems
[291] are chewed as thirst-quenching.

184. eń gaisedjoi kitok (Rumex abyssinicus Jacq.). Livestock fodder.
[291] The leaves are eaten along the way as thirst-quenching.

185. eń gaisedjoi os sobugo. Use like the above species.

186. ol gĕlĕ (Phaseolus aff. Schimperi Taub.). Fodder for small
[262] livestock. Children eat the roots.

187. eń gĕlĕechŏ (Oldenlandia Schimperi T. And.). If cattle have fever, they are given the plant, sprinkled with wood ashes, to eat.

188. eń gĕmĕrĭlĕlĭ. As protective magic against lions, the person
[789] [825] spending the night alone in the open steppe or in the bush ties a twig on a stick and plants this in the ground beside him.

• 824 /362 cont./

189. ol gĕrĕachĕ. Ropes are made out of the bast.

190. ol gĕrmĕlĕsĕai (1)

1. The red blooming Talinum cuneifolium Willd. and Talinum caffrorum (Thbg.) Eckl. u. Zeyh. are likewise designated as ol garmalasia.

(Portulaca oleacea L.). Yellow blossoms. Good fodder for small livestock. El kuafi and impoverished El masai eat the leaves as a spinachlike vegetable.

[262]

191. eń gauri. Good fodder grass, especially for cattle.

192. eń gĕwĕmĕ (Cluytia kilimandscharica Engl.). The leaves are chewed in the case of throat catarrh and are supposed to have a loosening effect.

193. en gĕwĕrĕ (Sporobolus cordofanus Hoch.). Good fodder grass, especially for cattle.

194. ol gĕbĕrnja (Combretum spec.). /363/ Cattle sick with ehg ga om benek are given an infusion of an extract of the pounded leaves and fruits in a strong laxative.

195. ol gĕbĕrĕ l ĕ gĕmĕ (Sphaeranthus microcephalus Willd.). An extract of this herb is added to the first bath of the newborn child. During the first days after the delivery, the woman in childbed drinks a decoction of this plant, to which is attributed a favorable effect for the recovery of the birth organs.

196. ol gĕbĕrĕ l ĕ gĕmĕ ol sirgon (Sphaeranthus suaveolens D.C.). Popular fodder for donkeys: it has the advantage that it only rarely dries up, even in the driest period.

197. eń gĕdjŭ nĕbĕ (Enicostemma verticillatum [L.] Engl.). Gravid goats are said frequently to miscarry after eating this plant.

198. eń gĕgĕń gĕwĕ = ol ebereti (Phyllanthus kilimandscharicus Volkens).

199. ol gĕlĕ (Teclea unifoliata Engl.). The decoction of approximately ten finger-sized pieces of root is drunk unmixed for gonorrhea, mixed with milk and fresh blood as a tonic for the wounded.

/363 cont./

M
• 824 200. eṅ gĕlĕn gĕlĕ (Casia mimosoides L. and Sesbania punctata D.C.). Regarded as rich fodder for goats.

201. ol gĕtălăstĭ (Myrica kilimandscharica var. macrophylla Engl.). A decoction of four finger-sized pieces of root is drunk with beef broth as a stimulant. A smaller dose acts as Tonicum roborans /strengthening tonic/.

D
[752] 202. eṅ gĕrĭgŭs (Jatropha spec.). On bruises or sprains the El
[824] dorobo make incisions and drip into these the juice or rub in a powder of the charred twigs of the plant.

203. ol gĕrĭ l ol sibolio (Cleome diandra Burch.). Good fodder for goats.

204. ol gĕwăgĕt (Schrebera Holstii Gilg).

205. ol gibumbu. Good fodder grass.

206. ol gibumbul (Panicum spec.). Good fodder grass.

207. eṅ gidoṅ on dare = eṅ gaisedjoi.

208. eṅ gĭjăbŏrĭ (Indigofera suaveolens Jaub.). Good goat fodder.

209. eṅ gĭlŏgĭrgĭr (Sonchus asper Vill.). The milky juice of the plant is dripped into the patient's eye for eye inflammation.

M
[751] 210. eṅ gĭlŏlĭŏ (Pterolobium lacerans R. Br.). Secret medicine of the ol oiboni. He makes an amulet out of the powder of various parts of the plant, which is supposed to protect one against all kinds of illnesses.

211. eṅ giloṅo. If the noses of small children, especially of babies, have been made sore at the nostrils by flies, the mother chews the herb and smears the sore places with the chewed-out juice.

212. ol gĭlŏrĭtĭ (Acacia abyssinica Hochst.). At the meat meals the warriors cook two handfuls of the bark in approximately 15 to 20 liters of water and drink the nerve-stimulating decoction as desired.

/364/ 213. ol gĭnĕ (Scilla spec.). An extract of the pounded bulb is given to calves to drink for fever.

214. ol gĭnjĕ (Euclea fructuosa). Edible fruits. A root decoction is drunk for spleen pain. The handle of the bow is made from the wood.

215. eṅ gĭnjŏnjŏrĕt. The El kuafi give the small livestock, for diarrhea, a mash made of the pounded leaves and water, with the addition of steppe salt.

/364 cont./

• 824 216. ol giramatian (Enteropogon monostachyos [Vahl] Pilger). Good cattle fodder.

217. eṅ gĭrárŏ (Erucastrum leptopetalum [DC.] Engl.). Good [262] goat fodder. The leaves are also eaten as a vegetable by the el kuafi.

218. ol gĭrénĭ (Olinia Volkensii Gilg.). The simple dose of this nerve-stimulating remedy consits of the decoction of a piece of bark approximately five square inches in size, which is drunk as desired in the course of the day.

219. ol girgiri (Pterclobium lacerans R. Br.). Shield hoops are made from the twigs.

220. ol giriabori (1)

1. Here and there Indigofera Bankeana Vtke. was also called this.

(Tephrosia anthylloides Hoch.). Goats are said to die if they eat a great deal of this.

221. ol gĭrĭăn (Aristida adscensionis L.). In general good fodder grass, but cattle do not like to eat it when it blooms, because they dislike the smell of the blossom.

222. ol gĭrĭăn oibor. Good cattle fodder.

223. ol gĭrĭgĭr (Acacia pennata Willd.). The wood is used to make bows and shield hoops. Root powder is blown into the noses of calves and small livestock to drive away the maggots of the warble fly.

224. eṅ gĭschŏngĭ (Micromeria biflore [Ham] Bth.).

225. ol gĭtĕndĕ (Haemanthus nov. spec.). The extract of a cut-up, approximately fist-sized bulb is one of the means of inducing the em boschona sickness. The use of this drug is not as common as that of the other stimulants.

[271] 226. ol gĭs ărĕmbŭa (Stathmostelma globuliflorum K. Sch.). The large tuber is eaten to quench thirst on the march.

227. ol gĭtĕlĕgĭ (Clerodendron Hildebrandtii Vtke.). To cure the e' bujaṅgat sickness the cattle are given an infusion of leaf extract mixed with some milk.

/364 cont./

824 228. ol gŏbĕrĕsai. Fodder for small livestock.

229. eṅ gŏbŏnĭ. The leaves are chewed as a loosening remedy for coughs.

230. ol gŏdĭt ŏnjŭgi (Andropogon schoenanthus L.). After /365/ eating this grass, calves are afflicted with severe diarrhea, which often leads rapidly to death.

231. ol gŏdjĭt (Eragrostis spec.). Good fodder grass, especially for cattle.

232. ol gŏdjĭta ŏnjŭgi (Themeda Forskahlii Hack.). The grass, growing very thick, remains fresh in its lower part even during the dry season and for this reason is particularly valued as cattle fodder, though it is regarded as only middling in its goodness.

233. ol gŏdjŭk. The decoction of five finger-sized pieces of root is mixed with beef broth and is a stimulant often consumed at the meat meals of warriors.

234. eṅ gŏgĭ (Lycium cf. arabicum Schwfth.). A root decoction, mixed with milk or meat broth, is drunk to cure the ol dododoi l en dare sickness.

235. ol gŏgŏrĭsĭai. Babies are given an infusion of a root decoction if their behavior makes one think of illness and one is uncertain about its nature.

236. eṅ gŏgŏ mŏtŏnj (Boerhavia spec.).

237. ol gŏgŭrŏi (Berkheyopsis diffusa [Oliv.] O. Hffm.). Good fodder for small livestock.

[262] 238. ol gŏiăṅĕne (Ipomoea spec.). Children eat the roots.

239. ol gŏisĕrărĭĕ (Kedrostis spec.). Fodder for small livestock.

240. ol gŏlĭlĭ (Ficus spec.). The bast is used for binding the switches in the hut construction.

241. eṅ gŏlŏschŏ (Capparis galeata Fres.). An extract of the pounded shrub is given to feverish children to drink for curing purposes. The orange-colored, figlike fruit is edible.

242. eṅ gŏmăni. A decoction of a piece of bark half a square foot in size is drunk as a nerve stimulant and is said to make it possible for the warrior to cover great stretches in rapid march.

/365 cont./

• 824 243. eṅ gŏmbĕt (1)

1. Also called eṅ gamba.

(Eragrostis megastachia Link.). It is regarded as the very best fodder grass, especially for cattle and is therefore also called e' rube Eng ai.

244. ol gŏṅgŏrŭă (Orygia decumbens Forsk.). Good fodder for small livestock.

245. eṅ gŏnĭn (Sida Schimperiana Hochst.). Good fodder for small livestock.

246. eṅ gonini. A secret medicine of the ol oiboni, who gives it as an amulet against fever.

247. eṅ gŏnĭni os săgărăram (Dyschoriste Hildebrandtii). Fodder for small livestock.

248. ol gŏnjĕl (Rhamnus prinoides l 'Hérit.). Older men drink a decoction of the wood to cure muscular rheumatism.

[273] /366/ 249. ol gŏnjĕt. A few twigs with leaves are put in the honey beer, first -- so it seems -- to prevent acetic fermentation, and then because there is attributed to this decoction an effect driving away taeniae and ascarids.

250. eṅ gŏrbŏbĭt (Euphorbia sparsiflora Vlks.). One fears the milky juice, which, as soon as it gets in the eye, produces a rather painful inflammation.

251. eṅ gŏsŏ mŏtŏnj (Cycnium Meyeri-Johannis Engl.). Fodder for small livestock.

252. eṅ gŭjĕnĕ (Cyathula Merkeri Gilg) (1).

1. Described by E. Gilg.

Cyathula Merkeri Gilg n. sp.; suffrutex humilis caule subterraneo lignoso apice ramos numerosos erectos iterum paullo ramosos emittente, ramis parce hispidis; foliis oppositis obovato-oblongis usque oblongis, apice subrotundatis, apice ipso breviter apiculatis, basin versus sensim in petiolum brevem angustatis, membranaceis, integris, parce

M 824 /366 cont./

strigosis; floribus argenteis in apice caulis in capitulas parvas sphaericas densiusculas dispositis; inflorescentiis partialibus 3-floris, floribus partim hermaphroditis, partim masculis, partim sterilibus; tepalis 5 lanceolatis, rigidis; staminibus 5 semper cum pseudostaminodiis 5 ovato-triangularibus teneris alternantibus; ovario ovato, stylo longissimo.

Plant 20-25 cm. tall. Leaves 1.5 cm. long, 8-10 cm. wide. Leaf stalk 3 mm. long. Capitulum approximately 1 cm. in diameter. Perianth leaves 7-8 mm. long, 2-3 mm. wide.

A secret medicine of the ol oiboni and ol goiatiki. A root decoction is taken as a diaphoretic agent for fever.

253. ol gŭlǎngŭlǐ (Caesalpinia Bonducello Roxb.). From the powdered leaves the ol oiboni makes an amulet against fever. The hard, ball-shaped fruits are used as stones in the board game (en dodoi).

254. eṅ gŭlɛ́lŏ (Harrisonia abyssinica Oliv.). A small piece of bark is cooked with beef broth as spice for it.

255. eṅ gŭlŏ́ilŏ. Fodder for small livestock.

256. ol gŭm. Edible fruits. A leaf extract is used to wash out inflamed eyes.

257. ol gŭmi (Vangueria edulis Vahl.).

258. ol gurmajek (Barleria spec.). Fodder for small livestock. D [824] The twigs are popularly used as bed padding in the hut. The El dorobo value it as a good honey plant.

259. ol gurschaschi (Barleria mucronata Lindau). Small-livestock fodder. Numerous punctures with the very sharp thorns of the plant are made around a snake bite, in order to facilitate pressing out an abundant quantity of infected blood. A decoction of stalks and roots is used as an emetic.

/366 cont./

• 824 260. ol gurschaschi 1 os subertai (Barleria cephalophora Lindau (2).

2. A new species.

A root decoction is drunk to treat muscular rheumatism.

261. ol gŭschŭrĕ (Farsetia stenoptesa Hoch.). Fodder for donkeys.

[271] 262. eṅ gŭsŭăgĕ (Rivea kituiensis [Vtke] Hall.). The tuber is chewed en route on marches to quench thirst.

/367/ 263. ol ĭăsŭrĭă (Anticharis linearis Bth.). Fodder for small livestock.

264. eṅ ĭăsŭrĭă 1 ol asurai ṅĭro 1 ol jaṅit subugi (Barleria mucronata Lindau). A person bitten by a snake is set over a wood fire on which are thrown leaves of the plant, together with sheep hair, to cause him to perspire profusely from the smoke thus created.

265. ol idoṅdoṅ on dare = eṅ gaisedjoi.

[751] 266. eṅg ischoṅgĭ. From the plant the ol oiboni makes an amulet against fever.

267. ol iogĕno (Boerhavia plumbaginea Cav.). Good fodder for small livestock.

268. ol ĭŏgĭŏnŏ (1)

1. Designation of the Masai.

(Pentas zanzibarica [Kl.] Vtke.). Older men drink a root decoction as a remedy for muscular rheumatism.

269. en jăbŏrĭ (Tephrosia aff. Uhligii Harms). Good fodder for small livestock.

270. en jăĭĕgŏi (Grewia spec.). Good fodder for small livestock.

271. ol jănĭ ănjŏ (Turraea Volkensii Gürke).

272. ol jănĭ ĕrŏk (Bersoma Volkensii Gürke). The warriors like to use the soft twigs for making bed padding on marches.

273. ol jănĭ ĕmŭnj (Glossonema Revoili Franck.). Good livestock fodder.

274. ol jănĭ 1 ol sirgon (Cadaba farinosa Forsk.). If donkeys eat a great deal of this, it causes severe constipation, which is said to be frequently fatal.

/367 cont./

• 824 275. ol jánĭ 1 oń guăr (Dichrostachys nutans Bth.). The hunter seeking game in vain thinks he will quickly find it after breaking off a twig.

276. ol jánĭ 'njŭgĭ (Embelia Kilimandscharica Gilg.). Acts as a laxative and, in larger doses, is regarded as an agent for driving away taeniae and ascarids. The cold extract of two handfuls of bark is warmed and mixed with fat, meat broth, or milk before being taken.

277. ol jánĭ oibor 1 ol ogunja (2)

2. The plant is also called em bos 'l ogunja.

[789] (Heliotropium strigosum Willd.). Small-livestock fodder. The person spending the night alone in steppe or bush likes to toss a few plants into his campfire as protective magic against all kinds of dangers.

278. en jărū (Pennisesum ciliare Link). Good fodder grass for cattle.

279. en jĕnĕ ĭmălăsĭ (?). Good fodder for small livestock.

280. ol jerai (Acacia seyal Del.). It is one of the milder stimulants taken at the forest meals of the warriors. A piece of bark approximately a handbreadth wide and 20 cm. long is powdered and then steeped in cold water. This quantity is the simple dose per person per day.

281. ol jĕrtŭjăn (Euclea spec.).

282. ol jŏgĭ kĕtĕ (Euphorbia velutina Pax.). Small-livestock fodder.

283. ol jŏgĭ 1 el aijok (Euphorbia spec.). In order to simulate
[826] a circumcision, boys smear the glans with the milky juice. The glans swells /368/ because of this and prevents the drawn-back foreskin from slipping forward.

284. en jŏgĭ ol aiteri (Cluytia spec.).

285. ol jŏgĭ săbŭg (Euphorbia Schimperi Presl.). Regarded as poisonous.

286. ol jŏgĭr. Good fodder for small livestock.

287. ol jŏgŏlĭăn (Rauwolfia inebrians K. Sch.). The scabbard of the sword is made out of the wood.

/368 cont./

• 824 288. ol jorai = ol jerai (Acacia seyal Del.).

289. ol jorioi os sobugo (Disperis Merkeri Schlechter).

290. ol joroi ate (Acacia arabica Willd.).

291. ol kioge (Courbonia virgata Brogn. and Maerua Grantii Oliv.). Secret medicine of the ol goiatiki.

292. ol legemojik. Collective name for ferns.

[751] 293. ol legemojik l os soito (Actinopteris radiata Link). From the root the ol oiboni makes an amulet against all kinds of sickness.

294. ol legileña = ol gitende (Haemantus nov. spec.).

295. ol magaragara (Vitex Strickeri Vtke. et Hildebr.).

296. ol magaragara 'l osugo (Justicia uncinulata Oliv.). Fodder for small livestock.

297. ol magiñgi (Moschosma multiflora [Hoch.] Bth.). Adults drink a cold extract of the leaves for abdominal pain. For children a decoction of the leaves is regarded as an emetic.

298. ol magiñgi kětě. Use like the preceding.

299. ol magirigireni (Lippia asperifolia Rich.). The leaves, which smell like peppermint, are powdered and then added to the fat with which one rubs the head.

300. ol mairirgireni oibor. Small-livestock fodder.

301. ol magutian (Sporobolus Rehmanni Hack.). Good fodder grass, especially for cattle.

302. ol magutugut (Clerodendron discolor [Kl.] Vtke.).

303. ol mame. Fodder for small livestock.

304. ol mandaidet (Loranthus). A parasite, found on twigs of ol gamarlasis. It is used like this latter.

305. ol manera ñ gonjek (Triumfetha flavescens Hoch.). Fodder for small livestock.

306. ol mañgulai (Grewia villosa Willd.). The woman in childbed, during the first two days after delivery, is given a decoction of approximately 20 finger-sized pieces of root, to which is ascribed a favorable effect for the recovery of the birth organs.

307. ol mañgulai l eñ gob (Melhania ferruginea A. Rich.). Is used like ol mañgulai.

308. ol manuai. Edible fruits. A decoction of approximately ten finger-sized pieces of root is given for feverish gastric catarrh.

/369/

-824 309. ol marbait (Croton Elliottianus Engl. et Pax.). The decoction of an approximately hand-sized piece of bark is mixed with fresh blood and, as a strengthening soup, given to the patient who is weak or recuperating.

310. ol marigireni (Lantana salviifolia Jacq.). The extract or decoction of an approximately fist-sized quantity of stalks and leaves is given to goats and sheep as an infusion for diarrhea.

311. ol mariroi (Combretum splendens Engl.). For the en gutuke on janit sickness of cattle, which, in the view of the people, arises because the stricken animal has eaten grass polluted with uterine blood and hair from the birth of a gnu calf, a decoction of approximately two liters of minced root bark is given as an infusion.

312. ol masaba. For diarrhea cattle are given an infusion of a decoction of this shrub's root.

313. ol masambrai (Tamarindus indica L.). Fruits are edible.

[825] 314. ol masiligi (Calotropis procera R. Br.). One likes to use it in the bed padding, because it is said to keep insects away.

315. ol mata (Thespesia Garckeana F. Hofm. u. Dombeya reticulata Mast. vel aff.). The extract of an approximately hand-sized piece of bark is popular as an aid to digestion in connection with the forest meals of the warriors.

316. ol matasia (Clausena inaequalis [Spr.] Bth.).

317. ol mesigie (Rhus villosa L.). Edible fruits. The one wounded by arrow or spear drinks an extract or decoction of approximately ten finger-sized pieces of wood. The effect ascribed to this medicine is that the wound ceases to be moist, becomes dry, and, as a consequence, heals more rapidly.

318. ol mesigie kete (Rhus spec.). Use like that of the preceding Rhus species.

319. ol mesigioi kitok.

320. e' meta (Melasma indicum Wettst.). The woman in childbed, during the first days after her delivery, is given a root decoction of this plant, to which is ascribed a beneficial effect on the recovery of the birth organs.

321. ol meta (Indigofera kilimandscharica Vlks.).

/369 cont./

824 [301] 322. ol mogoṅgora, a liana not infrequent in the river forests. The root bark, smelling strongly like vanilla, is twisted, ropelike, and worn by men and women as a neckband. It also finds use as a secret medicine of the ol oiboni and the ol goiatiki.

323. ol mokotan (Albizzia anthelmintica Brongn.). One or two hand-sized pieces of trunk bark or root bark are pounded with a club into fibers and held for a few minutes in boiling meat broth for steeping. This soup is used by warriors as a nerve stimulant, by [832] women as an aphrodisiac. To cure gonorrhea, one adds a small amount of honey to the broth before drinking it. An extract that is made with double or /370/ triple the amount of bark is used to get rid of taeniae and ascarids, or also as an emetic for bilious fever. The fresh bark bast is chewed for constipation.

[262] 324. ol momoi (Solanum nigrum L.). Children eat the berrylike fruits.

325. ol mŏrǎn (Ocimim suave Willd.). A root decoction is used as an emetic.

326. ol moridjoi or ol morijoi (Acocanthera abyssinica). The arrow poison is obtained from the roots and wood by boiling.

327. ol marok l on dare.

328. 'mtaṅguju (Maerua rigida Oliv.). From the powdered root [751] the ol oiboni makes an amulet that is supposed to protect one against colds and fever.

329. ol muguti kitok (Caralluma spec.). The soft, fleshy twigs [271] are eaten by warriors on the march, by boys tending cattle, to quench thirst.

330. ol muguti l ol ňodjĭnĕ (Euphorbia spec.). Hyenas allegedly eat this plant.

331. ol muguti l ol ugaru.

332. ol mŭmŭnj (Acacia abyssinica Hoch.). Fodder for small livestock.

333. ol munjagara (1)

1. Also called eṅ gĭtŭmbŭ.

(Acalypha indica L.). Good fodder for small livestock.

D /370 cont./
824 334. e' mundéja (Phyllanthus spec.). The ol dorobo places a
825 twig of it close beside the slain game as protective magic to
789 prevent birds from circling above the animal and thus attracting other people.

335. ol mundéja (Veronica cinerascens). This plant serves the el dorobo as protective magic against lions.

M 336. ol murgéa (Phyllanthus). Shield hoops are made from the
• 824 branches.

337. é' murua. Milk fodder for cows.

338. ol ñaňboli (Ficus sycomorus L.). A decoction of two hand-sized pieces of bark is drunk for diarrhea.

339. ol ñéandus (Euphorbia spec.). Goats are said to die after eating this plant.

340. ol ñeriandus l en doje (Plumbago zeylanica L.). The ornamental scars on the faces of women are produced by cauterizing with the caustic root juice.

341. ol ñeriandus l on jahuri (Thumbergia alata Boj.). The sword scabbard is dyed with the red root juice.

342. ol ñjaligwa.

343. ol ñonomi (Cyperus spec.). Fodder grass for small livestock. The onionlike roots are eaten with special liking by guinea fowl.

344. ol ñonomi l el sirgon (Kyllingia alba Nees.) is a good fodder grass that is especially valued for donkeys.

/371/ 345. ol ñonomi l os sobugo = en ɛoilín.

346. ol obe kidoňoi (Sporobolus indicus R. Br.). Good fodder grass.

347. ol óbéréti = ol ébéréti (Phyllanthus).

348. ol obereti kete.

349. ol obereti kitok.

350. ol óbito (1)

1. The Masai also called Stephania abyssinica A. Rich. ol obito.

(Glycine javanica L.). Good fodder for small livestock.

/371 cont./

• 824 351. ol ŏbĭtŏ l ol bŭrgĕl (Rhynchosia caribaea D.C.). Good fodder for small livestock.

352. ol ŏbŏnĭ (Erythrina tomentosa R. Br.). Approximately six finger-sized pieces of wood are cooked in goat-meat broth. The soup is drunk as a cure for gonorrhea.

353. ol odoa (Maesa lanceolata). One chews several (approximately six to ten) of the pungently spicy grains for constipation. The frequent consumption of the pounded grains in beef blood acts as a nerve stimulant for the warriors.

354. ol oduerai = ol asajet.

355. ol odun ginowi. If children eat the root -- mistaking it for the ol dirgoian plant -- they have pains in the rectum.

356. ol ogildia (Coleus kilimandscharicus Gürke). The juice of the peppermintlike-smelling leaves is dripped into the eyes of cattle to cure inflammation.

357. ol ogildia ate. The cow is given a leaf decoction to hasten the expulsion of the afterbirth, if this takes an abnormally long time.

358. ol ŏgĭnŏ (Boerhavia diffusa L.). A root decoction is drunk for articular rheumatism.

359. eng ŏgĭrĭsĭăi (Justicia flava Vahl.).

360. ol ogor l oinok (Pennisetum spec.). Good fodder grass, valued especially for bulls.

361. ol ogoreno. Good fodder grass.

362. ol oguldim.

363. eng oibarasĕj (Ampelocissus abyssinica Pl.). The blue, grapelike fruits are edible.

364. ol oibor benek (Dregea rubicunda K. Sch.). The root bark, together with that of ol mogongora, is used to make neckbands. Powdered root is sprinkled in the hair as perfume. A root decoction is popularly added to the honey beer as a taste corrective. It is also regarded as loosening for catarrh and, for this, is drunk with meat broth, or, as a laxative, between the consumption of milk and meat.

[301] [302] [273]

365. ol oiborgeba = ol oiborkeba (Tricholaena rosea Nees) is a good fodder grass.

/372/

• 824 366. ol oiborgeba 1 os sobugo (1)

1. In places Aristida adscensionis L. and Eragrostis Schimperi (Hoch.) Bth. are also called this.

(Dinebra retrofleya Vahl.). Good fodder grass.

367. ol oibor ňariat (Aerua javanica Bl. Juss.).

368. ol oidj' erok (Sanicula eureupaea L.).

369. ol oidju (Vernonia pauciflora Jess.). Small-livestock fodder.

370. ol oidubului.

371. ol oigĕro (Ormocarpum Kirkii S. Moore).

372. ol oigĕro kĕtĕ (Pteridella viridis [Forsk.] Uech.).

373. ol oigĕro kitok (Pteris longifolia L.).

374. eňg oigimĕgi (Hibiscus crassinervis Hoch.). Fodder for small livestock.

375. ol oigororomi (Hibiscus calyphyllus Cav.). Shield hoops are made from the branches. The switches for building huts are bound with the bast.

376. ol oigororomi kĕtĕ (Abutilon hirtum Don.). Use like the preceding.

377. ol oigoromi oibor (Abutilon indicum [L.] Don.).

378. ol oigururōni. Fodder for small livestock.

379. eňg oija basēj (Wedlia abyssinica Vtke.). Fodder for small livestock.

380. ol oija basēj (Wedelia [mossambiciensis Oliv. ?]). Good fodder for cattle.

381. ol oijawijab (Croton macrostachys A. Rich.).

382. ol oijesai (Pupalia lappacea [L.] Mog.).

/372 cont./

• 824

383. ol oilale (2)

2. The Masai also called Zizyphus Jujuba Lam. ol oilale.

(Colubrina asiatica Brongn.). During the first days after delivery, the woman in childbed is given a bark decoction mixed with beef broth, to which is ascribed a beneficial effect for the recovery of the birth organs.

384. ol oile (3)

3. Euphorbia Schimperi Presl. is also called this.

(Euphorbia Tiruculli). One glues the spear shaft into the sockets of blade and shoe with the heated juice.

385. oiri (Grewia populifolia Vahl.). Small-livestock fodder. Edible fruits.

386. ol oirien. Clubs are made out of the beautifully marked wood. Foul-smelling gourd bottles are smoked with the wood.

387. ol oiriroi (Maerua Eminii Pax.). Edible fruits.

388. ol oiriroi roñgai. The board game (en dodoi) is made out of the wood.

389. ol oisugi (Fargara Merkeri Engl.). The mother gives the baby the extract obtained by chewing a piece of bark the size of half a finger, mixed with milk, to drink for coughs.

390. ol oitebereg (Chenopodium opulifolium Schrad.).

/373/ 391. ol oitero eñ ñijaba (Clerodendron ternatum Schinz). The herb is chewed in order through that to blacken the gums, tongue, lips, and palate.

392. ol oitero 'gischo 'el ñijaba = ol oitero eñ ñijaba.

393. oñti (Acacia mellifera Bth.). The thorny branches are used with special liking for the construction of the barricade of branches around the kraal. The cold extract from a piece of bark about the size of five fingers is a vigorously acting emetic, which is taken for fever, etc.

/373 cont./

M
• 824

394. ol oja basẽj = ol oija basẽj.

395. ol ojeńgalāni (Sesbania aegyptiaca Poir.). The decoction of a piece of bark approximately ten inches square in size is given the cow to hasten the expulsion of the afterbirth, if this is protracted for an abnormally long time.

396. ol okitẽni. The decoction of an approximately fist-sized piece of bark is regarded as loosening for catarrh.

D
[824]

397. ol omej. Masai sometimes, El dorŏbo often, stick a branch of this on either side of the hut door as protective magic against predatory animals.

D
M
[825]
[789]

398. ol ŏmŏ. Valued by the El dorŏbo as a good honey plant.

399. ol ońorua (Maesa lanceolata Forsk.). A nerve-stimulating agent of the warriors. They drink the decoction of approximately seven finger-sized pieces of the pungent-tasting root at the ol bul meals, as desired.

400. ol ońoroń. The berries are edible.

401. ol ŏńŭ (Andropogon Schoenanthus). The livestock do not like the grass, because of its lemon smell. In places the grass is used to make a diaphoretic tea that is given for fever.

402. ol ońuńoi = ol gitende (Haemanthus nov. spec.).

403. ol ŏrŏk olele (Justicia matamensis). Good fodder for small livestock.

M
[825]

404. ol ŏrŏndŏ (Cissus Paraguensis Gilg). Warriors en route and especially during the forest meals like to put the vines into the bed padding, because they are said to keep away insects.

M
824
301

405. ol orowil kete (Justicia calcarata Hochst.). Fragrant neckbands are twisted out of the bark bast, smelling like vanilla.

406. ol orowil kitok (Justicia Fischeri Lindm.). Use like that of the preceding.

407. ol orowil l el aijok (Ageratum conyzoides L.). Use like that of the preceding.

D
824
301

408. ol orowil l el dorŏbo (Neuracanthus sacani Kl.). The El dorŏbo make fragrant neckbands out of the scraped bark.

409. eńg osida kitok. Good fodder for goats.

M
824
D
824

410. eńg osida gutok (Barleria ventricosa Nees.). El dorŏbo make arrow shafts from the branches.

/373 cont./

824 411. ol osidja gutok (Asystasia gangetica [L.] T. Amd.). One washes young goats and sheep with an extract of the crushed plant to get rid of fleas.

/374/ 412. ol osigiria l en djoi. If a cow has fever, one ties a twig on its tail, with which it then whips its body. The milk of such a cow is drunk by pregnant women, since it is believed that through that the child expected will not be susceptible to fever.

843 272

413. e' rano 'l ogunja (Pentanisca uranogyne S. Moore). Fodder for small livestock.

414. o' rarait (Cissus rotundifolia [Forsk.] Vahl). The leaves are placed on wounds as a plaster. A root decoction mixed with bull-meat broth is drunk for muscular rheumatism.

415. o' remit (Salvadora persica L.). The pieces of twig chewed to resemble a brush are used as toothbrushes. A paste of powdered root takes the place of our mustard plaster. A decoction from about five finger-sized pieces of root to be drunk is regarded as a cure for gonorrhea and cystic catarrh.

416. e' rikáru (Andropogon papillosus Hochst.) is a good fodder grass (1).

1. On the southern end of Lake Natron a Panicum species was also called e' rikaru.

417. o' rikáru (Cynodon dactylon Pers.) is a good fodder grass.

418. o' riroi, also called o' riroi l om bɪ (2)

2. Eulophia Shupangae Krzl. was also called this.

(Gladiolus nov. spec.). The juice obtained by chewing the bulb serves as glue to fasten the feathering on the arrow.

419. o' ropande (Commiphora spec.). The extract or decoction of a piece of bark the size of two or three hand-palms, mixed with meat broth, is taken as a remedy for abdominal pains. Since its effect is considerably milder than that of similar remedies, it is preferred by pregnant women.

/374 cont./

• 824 420. o' rŏs oibor. Fodder for small livestock.

421. o' rosua (Celosia trigyna L.). Fodder for small livestock.

422. e' rube. Very good fodder grass, especially for cattle.

423. e' rube Eñgai = eñ gombet.

424. e' rube kitok. Good fodder grass.

425. e' rube loñ gischu (Panicum and Ptychophyllum). Good fodder grass.

426. e' rube os sobugo (Andropogon Sorhgum Bros. var. effusus Hack). Good fodder grass, especially for cattle.

427. e' ruguni (Hydnora). An extract of four finger-sized pieces of the rhizome, mixed with milk, is given as an infusion to babies for diarrhea.

428. es sabai (Indigofera). Small-livestock fodder.

429. os sadjĭlo. The livestock does not like to eat the grass in the blooming period, because the smell of the blossoms is unpleasant to it.

430. os sagararam (Bauhinia reticulata D. C.). A piece of bark two feet long and approximately as broad as a hand is pounded and cooked in beef broth. The broth, which old people drink mixed with milk, is regarded as a remedy for gonorrhea and urine retention.

/375/ 431. 'sambaragaiĕt (Indigofera Garckeana Vtke.). Small-livestock fodder.

432. os sĭmbŭgŭbĕs (1)

1. Harrisonia abyssinica Oliv. was sometimes also called this.

(Albizzia maraguensis Taub.). Ax handles are made out of the wood.

433. os sambururoi (Glinus latoides L.). The pounded plant is placed as a plaster on burns.

434. os sanañgururi (Oncoba spinosa Forsk.). Fruits are edible.

/375 cont./

• 824 435. os sańgasch (Pennisetum ciliare Link) is a good fodder grass. The name os sańgasch also designates various thick grass and reed species; from one of the latter, in the primeval age, according to the myth, people made a reed splinter, which served for cutting the umbilical cord of the newborn child.

436. es sǎs (Leucas glabrata [Vahl] R. Br.).

437. os sĕgi (Cordia quarensis Gürke). A pile of this wood is burned at the ol ogor l ol gerĕti feast. Quarreling people are separated by placing an os sĕgi branch between them; one who would step over this would be punished by God. The girl who has [847] become pregnant chews approximately four finger-sized pieces of root to induce an abortion, whereupon the foetus is said to die quickly and to be expelled. For pains in the leg one ties a small piece of the wood around the ankle.

438. os sĕja = various species of reed.

439. os sĕjai (Cyperus spec.). Good livestock-fodder.

440. os sejai l eń gare (Cyperus spec.).

441. os sejai l ol sirgon = ol ńonomi l ol sirgon (Kyllingia alba).

442. os sembereměruĕt (Indigofera kilimandscharica Vlks.).

443. os senetoi (Cassia obovata Coll. and Cassia didymobotrya Fres.). A decoction of roots or leaves with the addition of some milk or butter is drunk as a remedy for pain and swelling in the spleen.

444. os sialti (Acalypha psilostachyoides Pax.). From the branches the boys make the shafts of the small arrows used by them.

445. os sialti ado (Acalypha fructuosa Forsk.).

446. os sialti oibor. Small-livestock fodder.

447. os sialti l os sobugo (Acalypha psilostachya Rich.). Small-livestock fodder.

448. os sialti l os sobugo oibor (Acalypha ornata M. Arz.).

449. os sida gutok (Asystasia rostrata).

450. es sida gutok kete (Justicia diclipteroides Lindau).

451. os sigiria l en djoi (Ormocarpum Kirkii S. Moore). A decoction of approximately 20 finger-sized pieces of wood is given to donkeys as an infusion for coughs.

/375 cont./

824 [751] 452. os sinande. Secret medicine of the ol oiboni; ingredient of amulets that are supposed to protect one against wounds, sickness, and accidents.

453. os sinóni (Lantana salviifolia Jacq.). With the wood, /376/ whose smoke smells pleasant, one fumigates the gourd bottles to remove the unpleasant odor arising in them through use.

454. es sisiñí (Corchorus trilocularis L.). Good fodder for cattle, goats, and sheep.

455. es sisiní (Schwabea esboliolides Lind.). Small-livestock fodder.

456. os siaiwet (Ocimim filamentosum Forsk.). Women like to use the bush as padding for the bed, on account of its pleasant peppermint-like smell.

457. os siteti (Grewia bicolor Juss.). Fruits are edible. The straight, long, and very thin sticks that older men always carry with them are made from the branches. Pregnant women drink a tea made from the leaves, which has a laxative effect.

458. os sobugET (Dombega).

459. os sodio (Euclea fructuosa Hiern). Approximately one tablespoon of scraped root bark, mixed in honey beer, is taken as a strong laxative for pain and swelling of the spleen.

460. os sogonoi is an older large tree, which, in the younger stage, is called en doroniki. Its bark is used like that of the last one, but its effect is less vigorous.

[301] 461. os songoio (Indigofera spec.). The warriors make fragrant neckbands out of the bark bast.

[862] 462. os suguroi (Aloe). If the child is to be weaned, the mother smears on her nipples the bitter juice of the fleshy leaves and thus makes the breast repugnant to the baby. People who like to drink a great deal of honey beer steep in it two pieces of wood a hand-span long which has been previously pounded with a club. This addition is supposed to prevent both the indisposition from carousing and an upset stomach. A piece of root is put in the fermenting honey beer for hastening the fermentation.

463. os sugurtuti = ol dinjai (Cissus quadrangularis L.).

464. os sumatégi (Embelia kilimandscharica Gilg). Edible fruits.

/976 cont./

• 824 465. ol uai (Acacia spirocarpa Hochst.). The extract of an approximately fist-sized piece of bark is drunk as a remedy for diarrhea in human beings and animals.

466. ol ugunonei (Heeria cf. pulcherrima Schwfth.). The extract of approximately two handfuls of bark is regarded as a remedy for diarrhea. One spending the night alone in the steppes chews some bark and spits it out all around on all sides, murmuring uscho-uscho. Then he lies down to sleep, feeling safe from the attack of nocturnal predatory animals.

[789] [825]

467. Tsche. The ol daschöni, before returning to camp, lays a few branches beside his hunting booty and through that regards it as protected from being devoured by birds and predatory animals.

[825]

468. ol wäiñ (Adenium obesum [Forsk.] Roem. et Schult.). The plant is regarded as poisonous for donkeys.

123 824 Our use of the capture gun to capture and mark wild animals was of particular interest to the Masai. They would often come up to watch us. Masai are famed

123 461 824 for their refusal to carry out manual labor of any sort hence are regarded in East Africa as poor helpers on safari. However, labor, where it involves animals, is another matter. Sometimes Masai would come up and voluntarily help us handle captured animals, and this they did very well. We even experienced Masai coming to our camps to talk about our capture work that they had observed from a distance.

123 262 609 When we had extra meat from animals that we collected, we took it to the nearest Masai village. Most writers have reported that Masai will not eat the meat of most wild animals. We found, however, that they gladly accepted it in most cases. They always wanted to know what animals were involved. In several cases, when we first approached a village those who came out to meet us would refuse the meat. Then someone who knew us or knew of us would appear and accept the meat, explaining that the others did not know us.

123 757 Virtually all visitors to Masailand are regarded as a sort of travelling dispensary by the Masai. This is true throughout the world for most people who do not have

*233
231 We had the feeling, however, that donkeys just as other
554 livestock are a measure of success and security, and regardless of the need some donkeys would be maintained.

*136 These donkeys are small animals whose weight
231 is probably less than half that of a wildebeest (i.e.
*233 under 200 pounds). They are quite independent. We often saw the small herds of donkeys leave a boma unherded and go to a water hole, then graze back to the boma. This practice probably would not be followed in areas where predators were common, but in the peripheral areas it appeared to be the rule.

178 Large numbers of donkeys appear to have been
231 the rule for some time. Joelson in a general discussion
*233 of East Africa in 1928 referred (p.61) to the "Masai, who graze immense herds of cattle, small stock, and especially donkeys..."

*233
182 Burning
232 The Masai burn grass whenever it is dry enough
• 824 to ignite. The reasons they give for burning include the following: It produces a flush of new grass that is particularly palatable, nutritious and easily available for their livestock. It clears the woody growth and makes new grazingland. It clears or reduces ticks, tsetse fly, and disease.

(22 177 372 (182) easier to light more fires are lit, just as in the case of hunting tribes who have received firearms; with game easier to kill, more game is killed. Control in these matters appears to be enforced by availability of tools and difficulty of accomplishment, not by any conservation ethic.

132 We questioned Masai, other Africans, and Europeans about lightning fires and never found the slightest evidence of lightning causing fires in the savanna country. There is no doubt that it ignites some fires in [illegible] rim-rock or mountain areas, but we never even saw a lightning-struck tree in the study area. All the lightning we observed in storms was high, it occurred in heavy rain storms, or it was low in the region of Lake Victoria.

182 232 • 324 *233 There does not seem to be any discipline or organization to the burning by the Masai. Fires are started in dry grass when herds leave an area, but they are also lit when herds arrive in an area, if the grass is dry enough. They are even lit in pauses during rain storms.

The forest country on the hills is also burned at

*233
182 every opportunity. There the purpose is primarily to
232 clear new grazing land. During the 30 months of our
• 824 major study period, we were in sight of the Mau forest (at the foot of the Mau Escarpment) at least twice a month, often in the rains, and only once did we not see smoke from a fire burning in the trees or brush.

*13 Relations with Wildlife
648 The most significant influence the Masai have exerted upon the wildlife is their protection through
[171] excluding hunting tribes from Masailand. The Wanderobo are an exception, but there are relatively so few Wanderobo that they have little effect. The areas of East Africa where the finest assemblages of grassland wildlife still exist are those in Masailand.

224 The animals Masai hunt or have hunted include
[237] buffalo for shields and possibly food, eland for food and
[714] the hides, giraffe for hides and tail hairs (to ornament gourds and dresses,
[531] according to Millais, 1920), lions and sometimes leopard
[825] for defense and for lion manes, and rhinoceros for horns and to spite national park authorities (particularly
*[233] in the past decade). In times of drought the Masai may spear various animals for defense or to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

FL12 Masai FL12

Naa, ten ëä en-ginyi-kerai, neitau 'ñgotonye ake 'n-dökitin.

If a baby dies, its mother only lays aside her ornaments[1]. 765

Il-tauja oo 'l-meneñga[2] loo-'l-tuñganak, oo 'l-asuria.

People's souls and spirits, and snakes[3]. 775

Ten etaa en-nëä ol-tuñgani, nëji etaa en-nedufigo ol-tau lenye. Naa, ten ëä ol-tuñgani, ore p' einosi, nëä sii ol-tau lenye. Nëji eidipi anaa 'n-gishu: meitöki ol-tau apiu.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4]. [763]

Kake ten ëä ol-oiboni araki ol-karsis, nenukari, ore pe eñgwëyu o-sesen lenye, nëji etawale ol-tau lenye, etaa ol-asurai; nelo ol-asurai eng-añg oo-'n-gera enyena, neiñguraa.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them. 766 775 825

Ti-araki naa nëja, pe mëar il-Maasae 'l-asuria lenye. Naa, ten edol i-figoröyok ol-asurai ti-aji, nesuaki kulle, nemej ol-asurai, nelo.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away. 778 825

Etii 'l-asuria oorook, naa le-'n-gishömi oo-'l-Aiser; naa, ten ëar likae etii 'l-oopeny, nëjo: 'Miar, amu 'l-kulalafig.'

There is a black snake, which is sacred to the Aiser clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them. [614]

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Schilderungen*, pp. 130, 192; and *Emin Pasha in Central Africa*, p. 338, &c.). [171]

[2] Ol-tau, the heart, mind, soul; ol-meneñgani, the corpse, spirit, ghost. [192]

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 127, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 55; Casati, *Ten Years*, p. 31; *Emin Pasha*, *loc. cit.*, p. 339, &c.). The Zulus hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 233). [171]

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 124, 188).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

778 825 Eata sii en-gishōmi naji 'l-Tarōsero 'l-asuria lenye sambu. Naa, ten ĕarare ol-tuñgani loo-'l-Tarōsero ol-likae, pe meitĕu, neipot 'l-asuria lenyena, nĕjo: 'E-sile e-'ng-aji e-yĕyo, talakunye!' Naa, ten eitu ekwet lido ĕarare, nepwōnu, 'l-asuria aaony.

The Tarosero family have their own particular snakes, which are of many hues; and when a member of this family fights with some one and gets the worst of the combat, he calls upon his snakes, and says: 'The avengers of my mother's house, come out!' If the man with whom he is fighting does not run away, the snakes will come and bite him.

[614] Eata sii kulye-shomīto 'l-asuria lenye. Etii 'l-asuria ooibor, netii 'l-oonyokyo, netii sii 'l-oonyori. Etii 'l-kulikae ooata en-dōki natii e-murt anaa ol-kila lo-'l-móruo, neibor kulikae 'l-lughuny anaa ol-móruo kitok.

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Ĕji sii eata 'l-oibonok 'l-kulenyena ootii ol-bene.

The medicine-men are also said to have snakes, which they keep in their bags.

766 775 791 Nĕji ten ĕä kulikae-tuñganak kituak anaa 'M-Batyany, ore pe enukari, nepwo 'l-tauja lenye eng-aï.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 828 Ten eirura ol-tuñgani, nemebuaki likae-tuñgani einyĕye. Einyĕye akiti, amu ĕji: 'Ebaïki meidim ol-tau lenye atorinyunye, nĕä.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

775 825 Ĕjo 'l-Maasae metii 'l-meneñga, amu medol; kake ĕji edol in-gīshu, naa ten eiñguraa 'n-gīshu pôkin e-wĕji nĕbo, nĕji edol il-meneñga araki ol-ōwaru.

The Masai say there are no such things as ghosts because they do not see them. But it is supposed that cattle see them, and when a herd of cattle all gaze at one spot, they are said to be looking at either a ghost or a beast of prey.

262 [415]

Ore 'n-gulye-tōkitin náinosi.

in gourds. Some drink it pure; others mix it with milk [1].

There are a few other things which the Masai eat.

276 Enyaal il-móruak oo 'ñgorōyok ol-kumbau áitushulaki e-makat o ol-kumbau loo-'l-muran. Netii 'l-oook too-'n-gumeshi ol-kumbau oidoñgo, nēji en-gisugi. Netii sii kulikae oook too-'l-mōtio.

Some old men and women chew tobacco mixed with salt and *Ocimum suave*, whilst others sniff ground tobacco up their nostrils: this latter is called snuff. Others again smoke pipes.

Eok sii 'l-muran, kake mēok pôkin. Menyaal ninje 'l-ayok araki 'n-doiye ol-kumbau, nemēok; etoni ake.

Those of the warriors who like it also take snuff. The boys and girls, however, neither take snuff nor chew tobacco [2].

437 276 [249] Metum il-Maasae ol-kumbau, amu meiyōlo aatuturu; kake einyañgu too-'l-meek, áinosye eng-orno oo 'n-dare tasati.

The Masai do not grow tobacco themselves, for they do not know how to dig. They buy it from savages, exchanging it for butter and lean goats.

Memiraki 'l-Maasae 'l-meek in-gīshu supati, 'n-gīshu olupin ake oo nemeata kulle, oo náiba 'l-asho, ninje ake emiraki 'l-meek, oo 'n-dare móruak oo 'n-dasati.

The Masai do not sell good cattle to the savages; they only give them barren cows, or those which have no milk, or which do not care for their calves. These and old or lean goats and sheep are the only animals they part with.

273 Nēok sii 'l-móruak in-aishi, neinyañgu 'l-maruan o en-joi too-'l-meek.

The old men drink honey-wine, and they purchase from the savages two kinds of beer, called Ol-marua and En-joi.

262 'N-gera ake náinos en-aisho najon. Ṭôki en-dōki nainos il-móruak te-'n-aisho najon il-changaro ake.

It is only the children who like wild honey: old men eat the comb full of grubs [3].

[171] [1] This custom is also common among the Bari (Kaufmann, *Schilderungen*, p. 170).

[556] [178] [2] In olden days it was the privilege of rich old men and their chief wives only to take tobacco, which was called ol-chani loo-'ng-onyek, the eye-medicine.

[825] [222] [3] The Masai obtain their honey by following the *Cuculus indicator* bird.

Omens.

The Masai believe in what they term Il-tiloi, or omens.

787
825

If a man goes to visit a woman who is ill, and the bird which is called Ol-tilo[1], on account of its note, cries on his left hand, he knows that the woman is very ill indeed. Should the bird utter its cry on his right hand, he knows that the woman is on a fair way to recovery.

If a person visits a man who is unwell, and hears the same bird crying on his left hand, he knows that the man is only indisposed; but on the other hand, if a bird cries out on the right side of the road, he knows that the man will die. [963]

Again, if a man goes to fight or to raid and hears the Tilo bird crying on his right hand, he knows that he will be successful. Should the sound come from the left hand, he will return home again, as he knows he will be beaten.

If a man is going to pay a visit and hears a Tilo bird behind him, it

The medicine-men.

Medicine-men have four methods of divining future events.

The first is by means of a buffalo or ox horn. A handful of stones[1] is thrown in, and they know what is going to happen by the number which fall out when the horn is shaken.

The second is by examining the entrails of a goat which they slaughter. From what they see there they are able to predict that certain things will come to pass, such as epidemics, &c.

The third method is when they drink honey-wine and get drunk. They are then able to prophesy what will take place.

The fourth method is by dreams. They tell people what they saw in their dreams, and it is believed to be a prophecy. Should the dream not come true after an interval of some years, people cannot say it is

[1] *Vide* note on p. 328.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

from having the honour of the feast of her initiation." Should the man decide to marry the girl, this heifer is counted as one of those which must be handed over for the marriage transaction (*see* Marriage). 848 582 884

Girls' Initiation.—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the warriors or boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a *manyatta* with one of her sons, then the girl's initiation will take place at the *manyatta*, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place when the day of the ceremony has been fixed and beer is prepared. A ram called *olekelnjatha* is slaughtered either before the actual operation or just after it. This is the "ram for childbearing," and is supposed to insure fertility. This ram is eaten by all those present at the ceremony. The actual operation is performed by an old woman, who is a skilled operator (she may be either a Masai or a Dorobo), and the girl sits on a skin inside the hut during the operation. The operation is said to be the same as that used by the Kikuyu on their girls, and this is a form of clitoridectomy, but exact details cannot be obtained from the men. As soon as the operation is over the operator washes the girl to "cleanse her of the blood spilt" and a ram is then slaughtered and given to the operator. This ram is called *oletuguet*. Next a ram is killed called *olkelelartat* to provide meat and fat for the girl during convalescence. 884 582 [825] [304] [171]

Shaving Ceremony.—Finally after the girl is healed and before she can go to her husband's village, a ram is killed called *olbarnet*, which is the "ram for the shaving," and at the same time the girl's head is shaved by her mother. [302]

PART V.—MARRIAGE.

Exogamy.—Marriage is always exogamous as far as sub-clans are concerned, but marriage within the main clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No one, whether as a boy, warrior, or a married may, may at any time ever have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (*see* below). 582 614 834

A woman remains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband. 614 585 851

Betrothal.—Amongst the Masai there are two usual methods of betrothal:— 584

(1) Betrothal of unborn children.

(2) Betrothal of infant girls.

[561] warcry of old: 'I am the son of So-and-So,' and 'I am the Son of
[535] Such-and-Such' and drive their branding irons into the outcrop.
[386] They fill their gourds with it and then return home and are
[574] treated with great reverence at Masai villages *en route*, being fed
[262] on a hot mixture of milk and water, known as 'blue water.'

Once painted, the young men formed into two columns, some 50 yards apart, and marched to the village. Many wore ostrich headdresses and some the lion-mane caps. Around their necks and waists they wore gaily coloured lengths of calico and beaded thongs secured crescent-shaped bells to their thighs. The clashing of the bells was deafening. This return journey to the village is carefully planned so that the young men do not have to walk through or near any water or cross a stream. On nearing the village, the columns counter-marched, then joined together into double file and entered the arena. As they passed, their mothers called out: '*Endopok*!'—'May you survive!'—but many of the women were busy attending to those throwing fits. There were a number of very violent ones as soon as the columns had passed within the circle of houses. Then the columns split up into groups and marched back and forth across the arena, each group
[534] led by an elder blowing a kudu horn (one of the very few Masai musical instruments). Now and then two groups would halt and, forming line, kneel and bow to one another; or to the *O-Singira* hut.

[561] Late in the afternoon of this day the mothers of the 49 'pure
[302] ones' shave their sons' heads. All the hair, eyebrows included, is
[413] removed by means of a spatulate Masai razor. Milk is used in place of soap. Whilst being shaved, each young man squats in front of his hut on the ceremonial hide on which, as a boy, he had sat to be circumcised, and which, in future, will form the top layer of his mother's bed. A little of the hair from the *Ol-Otuno* and his lieutenant is also put in their mothers' beds, the remainder being thrown into the calf pens which form a part of their family
[825] home. Great care is taken that none is left lying about in the open
[554] in case birds should use it for their nests—a grave affront to the young men's sacred role.

During the course of the day the branches used as night barri-
[189] cades between the houses were replaced with new ones bearing green leaves. This is a symbolic act, meant to ensure that the *muran* may flourish as 'green bay trees.'

The third day is called 'The Day of the Sacred Hut.' During the morning a heifer, a gift to the *Ol-Otuno* from his father, is driven into the bush and slaughtered. This animal, called 'The Cow of the Rings,' must be a first-calver, well built, and black with a white belly. All the *muran* gathered at the slaughtering place to receive their rings from 'The Cutter-up of the Hide,' whilst their families waited in the village in an atmosphere of great expectancy.

Late in the afternoon the first of the *muran*, naked and still whitened with diatomite, came running back to his hut. There he received a deafening welcome from his family, whom he then led in a boisterous procession round and round the sacred hut. Soon, the whole arena was full of *muran* leading their families round the *O-Singira*, everyone shouting and highly excited. Each young man wore, on the third finger of his left hand, a ring from the hide of the *Ol-Otuno*'s heifer. These rings are really only strips of hide about four inches long with a hole near one end to take the wearer's finger. After a time, the 'pure' 49 arrived, their shaven heads gleaming, white circles of diatomite like spectacles round their eyes and garlands of green leaves round their necks. They stood in a group near the *O-Singira* whilst the *Ol-Otuno* was led to his hut. In front of his doorway was placed the hide on
[351] which he had sat to be shaved, and on this was set his three-legged stool, and into its concave seat was poured a mixture of water, milk and honey. The *Ol-Otuno*, who seemed all too conscious of his role of scapegoat, then sat on the stool.

[Warrior Kraal]

/90 cont./

512 before the milking is finished, then the calves are allowed to go to
[234] the cows for about an hour, and finally /91/ the former must again be separated and shut up, so that there will be enough milk in the morning. At ten o'clock it becomes quiet, the people retire into the huts, except for the boys who lie down to sleep on the ground beside the goats.

136 The silence lying over the vast steppe is broken only now and then by the howl of the spotted hyena (Hyaena crocuta), reminiscent of the whistle of a siren, more rarely by the hoarse laughter of the striped hyena (Hyaena striata and Hyaena Schillingsi). Sometimes
• 825 the roar and growl of a lion can also be heard, and if the latter slinks about silently sometime, one becomes aware of its approach

535
701

C. G. Schillings phot.

Ill. 35. Dance in the war camp IV.

825 by the behavior of the cattle: they snort, stamp, and crowd together, or race wildly through the kraal. Then a number of women immediately hasten out of the huts, in order to drive away the beast
000 of prey by shrill, trilling cries (ol gijoi). A few intrepid warriors also

/103 cont./

619 After a battle of the Masai among themselves, the conclusion of
728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called etabaschage megitin = exchange of skin capes.

726 The length of the stretches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers,
[702] however, that the training of warriors consist only of marching, that,
[276] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the caravan people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they
271 compare the physical performances of the Masai with those of the Europeans in the tropics. The untenableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a gourd bottle of water on their
701 long migrations. The Masai, however, knows perfectly every little
182 spot of the steppes, he knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[823] water. Where water has collected in old hollow trees, and especially in baobabs, this is accessible to him through a series of steps made
[824] out of foot-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited
701 by their water content to quench thirst. They serve him, /104/ just as
182 the wild honey, not infrequent in the steppes, also serves as food on the
222 march. A cuckoo bird, the honey indicator (Cuculus indicator, called
[825] en johoroi by the Masai), leads the Masai to the concealed honey holes.
[136] As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it
[825] in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

701 /104 cont./
182 a little while, will then lead them farther. Otherwise they leave it
222 the rest.
• [825] When the warriors of an ol boror notice that their bones are
701 getting old and the el barnot surpass them in strength, they agree
561 that it is now time to think of marriage. After they have obtained
582 the permission of the speaker and then that of the chief, one after the other leaves the warrior association, each one shortly before his
701 wedding. He announces his retirement by means of a feast, the ol
561 geteh l ol bāī, that is, ox slaughtering with a tournament. To this
574 all the inhabitants of the nearest kraals are invited and are shown hospitality with the meat of one or several head of cattle. As soon as these are killed, each warrior cuts off a piece of meat for himself and devours it behind a bush standing somewhat apart. Then each of those present receives his share, while the remainder is strung on sticks two meters high. For these the warriors fight with the girls and women in a game in which the latter vigorously swing the sticks, before which the former has more fear than the women, somewhat
[526] accustomed to beatings. Then the younger ones amuse themselves and play, for instance, tag (tosudja). Before there is thought of de-
[539] parture, about five o'clock in the afternoon, a married man and his principal wife go to the host and make the following speech: "adjogi megur' ira ol morīni dada it' ol móruo, iñora ñ giechu inonu, ñ gera inonu, iñora naleh, tabala 'mbaa el móran, ida tada ol móruo, tabala n dogitin bīgin el móran, ida tada ol móruo"; in translation: I say, you are no longer Ol morīni, but Ol móruo, take care of your cattle and your goats and sheep and watch over them well, leave the occupation of the warriors, now you are ol móruo, refrain from all things of the warriors, now you are ol móruo.

701 After this feast it is up to the warrior whether he takes part more
561 or less regularly in the expeditions of war. As a rule he soon marries
[582] and lives with his wife either in the father's kraal or in the warrior kraal until all his contemporaries are married. Only then are they
[591] considered ol móruo: each one builds his own kraal and removes
[145] clothing, ornaments, and braid of the warriors. He is now at the end of the twenties, his best strength has been spent. In general the Masai, just like all members of the black race, spend their lives very quickly, they age early, without ever attaining a really advanced age.

/110 cont./

578 192 man. From young girls among themselves one hears ol orobó meaje = accumbens patri /one who lies with her father/, ol orobó 'l alabe = accumbens fratri /one who lies with her brother/.

Used by warriors toward young girls: hai em halíach = you, vulva; hai, e mówo = you, clitoris.

Younger children insult one another:

ósonji ol gonoe = vagina matris;

ol agambai Eig ai = hated by 'Ng ai;

tabebuá = Wumbie;

ol agaichiri Eig ai = cry to God (when you get a beating);

e mai = stupid fellow;

hai ol madai (or e madai) = you stupid fellow (stupid girl);

id' ol airirua, you are a blockhead;

id ol bua, you are a rowdy;

id' ol dilio endei, that is, you are indeed mad. The term ol

[136] dilio, which here means madman, is formed from the like-named bird, the red-headed Anaplectes melanotis, one of the many species of the weaver birds native to East Africa. If one en route hears it call-

[177] ing on the steppe from the left side, it means good luck, but if it

• [325] calls to the right of the traveler the latter will soon encounter a misfortune.

Ol agatar' em baia, that is, die by an arrow. ol agawa ol galing = die of fever; ol bebedo = of the epsie sickness; ol minjalei = of smallpox; ol gobogge = of stomach or intestinal sickness; ol agatarema ol gigaret = may the thorns prick you; ol agatarigi ol maiun = may your belly burn from eating; ol againkiacho = become black; ol agotharra = rogue, brawler; g ar' ol maranga = slanderer, gossiper; ol dulgani werari = bad fellow; ol dulgani gurat = coward.

201 To express contempt one spits before the person concerned or at him.

192 593 The large number of invectives stands in contrast to a striking poverty in terms of endearment.

/111/ The mother designates her child as 'l ziarka 'Ng ai = child given me by God, as ol gutuk e ilio = mouth of the mother, or as ol oib e ilio = resting place of the mother. The father calls it ara ilgotonji = child of the wife. Older brothers and sisters talk fondly to younger ones with the term ara e ilio = child of mother.

/163 cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the smashing of the spermatic cords with the club between the wood and string of a bow (a-164). The testicles are not removed, but are left to atrophy. In the same /164/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always not until they are fully grown. Bulls and bucks with unnatural sexual instincts are slaughtered as soon as the vice is noticed, since they are regarded as bringing bad luck. It is believed that, as a result of their behavior, they bring the punishment of God upon the herd in the form of an epidemic.

[125] [777] [784] [731]

231 The donkeys are small, square-built, strong, and steadfast. With nicely arched croppers, a rounded neck, firm and fleshy shanks, they are very similar in shape to the zebra. Their coloring is a uniform light grey with a black cross over the back and shoulders. They serve only to carry burdens, whereas oxen are only rarely used.

[492]

233

Ill. 54. Masai goats and sheep.

/176 cont./

231 es suben (es subeni), full-grown female head of small livestock;
192 ol balélo (el balelón), young male head of small livestock;
em balélo (m balelón), young female head of small livestock;
ol eléruē (el eleru), head of small livestock only a few days old;
ol óro (el orol), goat buck;
ol gíne (el gínedji), castrated goat buck;
en gíne (eń ginedji), she-goat;
eń gine eleboń, she-goat that has dropped young several times;
es suben eń gine, she-goat that has not yet dropped young;
olńbalelo l eń gine, male kid;
em balel' en gine, female kid;
ol meregésch (el meregeschi), ram;
ol gér (el gera), castrated ram;
eń ger (ń gera), sheep;
eń ger eleboń, sheep that has dropped young several times;
es suben eń ger, sheep that has not yet dropped young;
ol balelo l eń ger, male lamb;
em balel' eń ger, female lamb.

233 The far greater part of the steppes offers excellent pasture; only
2.1. smaller-or-larger shrubby meadows are quite unusable for this. The
[823] Masai know these precisely and scrupulously avoid them. What makes them unusable is first of all the occurrence of grasses that bring about digestive disorders and the lack of salt in sufficient quantities, through
[135] which a similar effect is brought about. In good pasturing places one always finds salt licks. The rain water standing in a depression in the ground has leached out the very saliferous earth and, after evaporation,
[825] has left behind a more or less strong, gray crust of salt. It is self-evident that one avoids those places about which the presence of the above-mentioned harmful insects is known. It is striking, however, that ticks are not feared at all.

561 When the pasture around the kraal has been grazed off, a change
233 of dwelling is decided upon, which takes place as soon as a new pasture ground has been found by a few people sent out. Then there is activity in the kraal long before daybreak. After the cows have been milked, the cattle moves off as the first party. Then the herds of goats and sheep follows, and after these /177/ the calves. Young

Infectious Diseases

757 164 For dysentery (eng ga en gobóge os sarge) the sick one is given much liquid sheep-fat or melted butter to drink.

Malaria (eng odjoógini). At the start of the chill, the patient is given an emetic, for example, a cold, strong extract of the bark of ol mokotaa (Albizzia anthelmintica). Even before the fever breaks out, a decoction of os sogonoi bark is administered, through which, in many cases, the outbreak of the fever is supposed to be prevented or alleviated.

753 825 It is interesting that the Masai -- so they say -- have always regarded the bite of the mosquito as a prerequisite for an attack of malaria. They say that the latter, with its bite, inoculates the person with a poison that causes malaria. For this reason they never [361] lay out their kraals in the vicinity of a swamp or other standing water, and also avoid those places in whose surroundings during the rainy season longer standing puddles form. /180/ In order to drive away the mosquitoes they burn (in the camp or in the hut) the peppermint-scented ol eborok (Plectranthus Merkeri, Gürke). If a kraal is badly afflicted with mosquitoes, its inhabitants leave it immediately out of fear of fever (1).

1. So they told me as early as 1895. When, at the beginning of 1896, Zendeo with a number of his people came to Moschi, I received in reply to my question as to whether they had to suffer much with fever the answer: "No, there are no mosquitoes near our kraals."

757 Other emetics are: root powder of ol aisai (Cyathula Lindowina Vlks.), which is taken stirred in water; a decoction of roots and stalks of ol gurachachi (Barleria mucronata Lindau); a root decoction of ol mokan (Solanum nigrum); the boiling down of a handful of bark or root of ol dukgui (Harrisonia abyssinica Oliv.); a cold extract of five finger-size pieces of the bark of olti (Acacia mellifera Bth.)

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

[272] [237] [415] [824] [539]

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

• 825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

775 /210 cont./
825 Allegedly they never bite the El kiboron people; on the other hand
826 the latter often use them as frightening devices against both Masai
613 and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Nenaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Nenaunir is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise "Nenaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (es setán), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and
789 the execution of special gestures. The aforementioned amulet ring
[751] (ol geretti) protects one against the effect of magic made by another
[754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The [842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' eñ gebāta feast. The eñ goguroi is tied around the ankle and protects one from ailments of the legs. The ol durgel [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorré protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

/226 cont./

The Worried Father

539 The warriors of a Wakuafi settlement wanted to make war on the Masai and for this purpose sent spies ahead. The latter returned with the announcement that they had found an ol bul place upon which lay roots of the ol onorua tree. They concluded from this that the Masai were at the moment living only on roots and must therefore be greatly weakened. An old man, however, advised them and told them that it was precisely with these roots, which they cooked together with meat, that the Masai gained great strength. The young men, however, did not believe him and pressed further for war. In order to keep at least his own son from this expedition, whose unfortunate outcome he foresaw, he struck him on the knee with his club in such a way that he was unable to walk for a long time. The others went to war and were all killed.

/227/

The Wild Animals

539 Many, many years ago men and women lived in different kraals.
• 825 The former had cattle, the latter used as livestock the wild animals, which at that time were still quite tame. One day a woman slaughtered a wild animal and then requested one of her children to drive the herd to pasture. But the child did not obey and first wanted to have some meat. Meanwhile the wild animals ran to the pasture by themselves and since that time never again returned to the kraal.

The Punishment of God

539

A poor Wandorobo widow, for whom no one cared, went to a Masai kraal with her two small boys, so that the latter, by tending livestock, would earn a living for her and for themselves. The man whose livestock the boys tended there took the old woman in. Soon afterwards a wife of this man gave birth to twins. The Wandorobo woman, who had hoped that the Masai would soon marry her, saw with discontent how he redoubled his concern for the young mother, and her jealousy of the latter increased to such an extent that she plotted her destruction. Thus, one day when the young mother left

000 /298 cont./

The land Ererait was very flat and during the rainy season was almost completely under water, for which reason warlike raids on the El gamassia could be undertaken only during the dry season. For external security they used tamed vultures (1),

• [825]

1. For such use there were the gray-brown vulture, named by the Masai ol motonj ingiro, by the El gamassia -- according to statements of the Masai -- ol atenai, and the black vulture, which the Masai called ol motonj erok, and the El gamassia, kilengoi. -- Perhaps in this use of the vulture or eagle for outpost duty lies the original reason for the use of this bird as heraldic animal. The Hethitischen /Hittite/ reliefs on the rock wall at Boghaskōi /Boghazkeui/, which may stem from the 13th century B.C., already show the double eagle escutcheon. The Seldschukken /Seljuk/ sultans adopted the escutcheon around 1217, and the German kaisers put it in their escutcheons in the year 1345.

which, with the approach of the enemy, quickly flew to the kraals and, through their simultaneous arrival in masses, announced there the inpending danger. A rather large river, named Timbinigi, and a smaller one, Narok morū, named after the black stones of its bed, flowed through the country.

The El marimar, whose chief was called Lesiti, were a nomadic people living only on the products of livestock breeding. Their cattle were black and white spotted; their goats were white and had horns half a meter long; the sheep were brown.

No circumcision was practiced among them. Before the wedding the bridegroom paid the father of the bride two cows and three oxen, as well as eight goats or sheep and fifteen pots of honey, while the mother of the bride received eight sheepskins for clothing and iron

/312 cont./

*121 *793 *171 *539 [796]

Among the Masai and the ancient Israelites the entire law, the natural and moral order, consists of precepts and interdicts of God. He commands the human beings to do good, he forbids them to do evil. He is the teacher of human beings in the distinction between good and evil, so that this ability to differentiate is one of his foremost characteristics even in the religious view of a primitive people.

The idea of the tree of life presupposes the desire for another characteristic inherent in God, for eternal life not limited by death. Now, however, is such a desire present in the feeling and yearning of a savage, culture-poor man? The extraordinary contempt for human life, the absence of mourning going beyond the customary interment ceremony, the idea that death brings sleep to the aged, rest from earthly life, answer the question negatively. The desire for long life is the result of a higher culture, and, indeed it is the civilized man who wishes for an eternal life on earth, but not the member of a primitive people.

I suspect, therefore, that the Israelitish original conception of paradise knew of only one tree, without any more detailed designation, "the tree concerning which I commanded thee not to eat any of it," as Jahve /Yahweh/ designates it in Genesis 3, 11.

The adoption of the tree of life, which may have come from Babylonian myth, then gave the originally one tree the addition "of the knowledge of good and evil."

In the Biblical presentation and in that of the Masai we find the picture of the tempting of the woman by the snake, which through that is represented as the symbol of evil, of sin. For the Masai this interpretation is still to be found in some of their customs. We saw that the members of the lineage of the El kiboron, peaceful, and therefore particularly beloved of God, do not fear snakes, and, further, they believe that the bones of their interred dead turn into snakes. Proceeding on the assumption that the story of the fall is the primary one, the first-mentioned belief in the naïve form of the primitive peoples shows that those living according to God's commands and illumined by his grace /313/ need not fear the power that evil has over man, whereas the second view demonstrates that what is sinful in man remains on earth and goes on living after his death.

[613] [825] [826]

/313 cont./

*121 It also appears not impossible, however, that the image of the fall
*773 of man first developed from these views. At yet another point we
*171 find among the Masai the belief in a mysterious power of destruction
*539 inherent in the snake. I mean the custom according to which the
• [825] warrior in battle hurls toward the enemy a leg bell that is filled with
[726] a mixture whose quantitatively largest and most effective ingredient
[789] is all or part of the contents of s snake's egg.

The Deluge

According to the myth of the Masai, God decided on the terrible punishment of the deluge when the wickedness of the human beings reached its height through the perpetration of the first murder. At that time there lived on earth a good, devout man named Tumnaiñot. God wanted to save him, along with his family, in order to preserve the good branch of the human race on earth. He therefore commanded him to build a wooden ark and to enter it with his people and a few animals of all species. As soon as everyone and everything was stowed away in the ark, the downpour began. After a time, when the waters had destroyed all living creatures outside the ark, God let the earth gradually become dry. Since meanwhile food had become scarce in the ark, Tumbaiñot wanted to find out about the level of the flood and sent forth first a dove, which showed him by its weariness in the evening upon its return to the ark that it had found no resting place, therefore the water must still be high. After a few days he then sent a carrion vulture, on which he had tied an arrow to a tail feather. When this bird returned in the evening, it lacked the arrow and the tail feather. Both could have been lost only because the arrow, after the vulture had alighted, was caught with its barb. When the waters had subsided, the ark landed in the steppe, where human beings and animals disembarked. When Tumbaiñot stepped out, he saw four rainbows, one at each cardinal point, as a sign that God's wrath had subsided. Of Tumbaiñot's six sons, the three from his principal wife founded the three tribes; the three from the other wife, the three lineage groups.

/ 361 cont. /

824 165. ol ěnjorio (1)

1. Designation of the El kuafi at Meruberg /Mt. Meru/.

(Pentas zanzibarica [Kt.] Vtke.). Older men drink a root decoction as a cure for rheumatism.

166. ol eňoroh (Orthosiphon Merkeri Gürke) (2).

2. Described by M. Gürke. Orthosiphon Merkeri Gürke n. sp.; caulibus erectis, 20--25 cm altis, ramosis, pubescentibus; foliis brevissime petiolatis, lanceolato-ovatis, basi acutis, margine crenato-dentatis, apice obtusis, utrinque pubescentibus, 10--15 mm longis, 5--10 mm latis; spicastris laxis, terminalibus, 6--10 cm longis; verticillastris 4--6-floris; floribus 5--8 mm longe pedicellatis; calycis extus puberuli labio superiore rotundato, marginibus subdecurrentibus, dentibus lateralibus triangularibus acutis, inferioribus longioribus, anguste-triangularibus, setoso-acuminatis. Masai steppes (Merker). Native name: el eňoroň.

[825] The herb, smelling strongly like peppermint, is burned on the hearth fire or in the hut doorway to repel the mosquitoes feared as fever-carriers.

167. en ěoilín (Cycnium Herzfeldianum Vtke.). Fodder for small livestock.

168. ol ěrăgŭdj (Toddalia aculeata Pers.). Fodder for small livestock.

169. ol eraĭ (Acacia cfr. arabica Willd.). The decoction of two handfuls of pounded bark is drunk as desired for diarrhea and is rightly regarded as very constipating because of the very high tannin content.

/362/

824 170. eṅg ĕrāmrăm (Senecio longiflorus D.C.). Fodder for small livestock.

171. ol ĕramrăm (Cissus Oliveriana [Engl.] Gilg.). Fodder for small livestock.

172. ol ĕrbăt (Achyranthes aspera L.). Fodder for small livestock.

173. ol ĕrbăt kĕtĕ (Achyranthes spec.). Fodder for small livestock.

174. en ĕsĕrĕrĭnĭ (Cuscuta ontusiflora A.B.K.). Fodder for small livestock.

175. ol ĕsŭbĕnĭ (Helinus mystacinus [Act.] Hemsl.).

176. ol ĕtănŏk (Hoslundia verticillata Vahl.). Edible fruits.

177. ol ĕlĭgŭrŭrŏnĭ (Pavonia Kraussiana Hoch.). Fodder for small livestock.

178. eṅ găbălăsĕs (Boscia coriacea Pax.). Edible fruits. The Shrub is regarded as prized fodder for donkeys.

179. eṅ gadardar (Ochna Merkeri Gilg). Secret medicine of the ol goiatiki. Clubs and ear plugs are carved out of the hard, beautifully marked wood.

180. eṅ gailowai (Commiphora spec.). Fodder for small livestock.

181. eṅ gairĕtuai (Physalis minima L.). A few twigs are placed in the first bath of the newborn child as protective magic against sicknesses of all kinds.

182. eṅ gaisĕdjoi (Oxygonum sinuatum [Hochst. et Std.] Bth. et
[271] Hk.). Fodder for small livestock. These sorrel leaves are eaten along the way as thirst-quenching.

183. eṅ gaisĕdjoi ĕăttŭă eṅ gĕre (Oxygonum sinuatum). The stems
[271] are chewed as thirst-quenching.

184. eṅ gaisedjoi kitok (Rumex abyssinicus Jacq.). Livestock fodder.
[271] The leaves are eaten along the way as thirst-quenching.

185. eṅ gaisedjoi os sobugo. Use like the above species.

186. ol gălĕ (Phaseolus aff. Schimperi Taub.). Fodder for small
[262] livestock. Children eat the roots.

187. eṅ gălŏschŏ (Oldenlandia Schimperi T. And.). If cattle have fever, they are given the plant, sprinkled with wood ashes, to eat.

[789] 188. eṅ gămărlăsĭs. As protective magic against lions, the person
[825] spending the night alone in the open steppe or in the bush ties a twig on a stick and plants this in the ground beside him.

/369/

824 309. ol marbait (Croton Elliottianus Engl. et Pax.). The decoction of an approximately hand-sized piece of bark is mixed with fresh blood and, as a strengthening soup, given to the patient who is weak or recuperating.

310. ol marigireni (Lantana salviifolia Jacq.). The extract or decoction of an approximately fist-sized quantity of stalks and leaves is given to goats and sheep as an infusion for diarrhea.

311. ol mariroi (Combretum splendens Engl.). For the en gutuke on janit sickness of cattle, which, in the view of the people, arises because the stricken animal has eaten grass polluted with uterine blood and hair from the birth of a gnu calf, a decoction of approximately two liters of minced root bark is given as an infusion.

312. ol masaba. For diarrhea cattle are given an infusion of a decoction of this shrub's root.

313. ol masambrai (Tamarindus indica L.). Fruits are edible.

[825] 314. ol masiligi (Calotropis procera R. Br.). One likes to use it in the bed padding, because it is said to keep insects away.

315. ol mati (Thespesia Garckeana F. Hofm. u. Dombeya reticulata Mast. vel aff.). The extract of an approximately hand-sized piece of bark is popular as an aid to digestion in connection with the forest meals of the warriors.

316. ol mătasia (Clausena inaequalis [Spr.] Bth.).

317. ol mesigie (Rhus villosa L.). Edible fruits. The one wounded by arrow or spear drinks an extract or decoction of approximately ten finger-sized pieces of wood. The effect ascribed to this medicine is that the wound ceases to be moist, becomes dry, and, as a consequence, heals more rapidly.

318. ol mesigie kete (Rhus spec.). Use like that of the preceding Rhus species.

319. ol mesigioi kitok.

320. e' mĕtĕ (Melasma indicum Wettst.). The woman in childbed, during the first days after her delivery, is given a root decoction of this plant, to which is ascribed a beneficial effect on the recovery of the birth organs.

321. ol mĕtĕ (Indigofera kilimandscharica Vlks.).

/373 cont./

M 824 394. ol oja basěj = ol oija basěj.

395. ol ojeńgalǎni (Sesbania aegyptiaca Poir.). The decoction of a piece of bark approximately ten inches square in size is given the cow to hasten the expulsion of the afterbirth, if this is protracted for an abnormally long time.

396. ol okitěni. The decoction of an approximately fist-sized piece of bark is regarded as loosening for catarrh.

D [824] 397. ol omej. Masai sometimes, El dorǒbo often, stick a branch of this on either side of the hut door as protective magic against predatory animals.

D M • [825] [789] 398. ol ómǒ. Valued by the El dorǒbo as a good honey plant.

399. ol oṅorua (Maesa lanceolata Forsk.). A nerve-stimulating agent of the warriors. They drink the decoction of approximately seven finger-sized pieces of the pungent-tasting root at the ol bul meals, as desired.

400. ol oṅoroṅ. The berries are edible.

401. ol ǒṅǔ (Andropogon Schoenanthus). The livestock do not like the grass, because of its lemon smell. In places the grass is used to make a diaphoretic tea that is given for fever.

402. ol oṅuṅoi = ol gitende (Haemanthus nov. spec.).

403. ol ǒrǒk olele (Justicia matamensis). Good fodder for small livestock.

M [825] 404. ol ǒrǒndǒ (Cissus Paraguensis Gilg). Warriors en route and especially during the forest meals like to put the vines into the bed padding, because they are said to keep away insects.

M 824 301 405. ol orowil kete (Justicia calcarata Hochst.). Fragrant neckbands are twisted out of the bark bast, smelling like vanilla.

406. ol orowil kitok (Justicia Fischeri Lindm.). Use like that of the preceding.

407. ol orowil l el aijok (Ageratum conyzoides L.). Use like that of the preceding.

D 824 301 408. ol orowil l el dorǒbo (Neuracanthus sacani Kl.). The El dorǒbo make fragrant neckbands out of the scraped bark.

409. eńg osida kitok. Good fodder for goats.

M 824 D 824 410. eńg osida gutok (Barleria ventricosa Nees.). El dorǒbo make arrow shafts from the branches.

/376 cont./

824 465. ol uai (Acacia spirocarpa Hochst.). The extract of an approximately fist-sized piece of bark is drunk as a remedy for diarrhea in human beings and animals.

466. ol ugunonoi (Heeria cf. pulcherrima Schwfth.). The extract of approximately two handfuls of bark is regarded as a remedy for diarrhea. One spending the night alone in the steppes chews [789] some bark and spits it out all around on all sides, murmuring [825] uscho-uscho. Then he lies down to sleep, feeling safe from the attack of nocturnal predatory animals.

[825] 467. Usche. The ol doroboni, before returning to camp, lays a few branches beside his hunting booty and through that regards it as protected from being devoured by birds and predatory animals.

468. ol walia (Adenium obesum [Forsk.] Roem. et Schult.). The plant is regarded as poisonous for donkeys.

562 eat meat from wildebeests and gazelles. When I shot an elephant near one boma the Masai women turned out in [252] force. They spent most of the day cutting off strips of [462] subcutaneous fat and some flesh. A few elders joined • [825] the women in the cutting. Several Masai requested fat from a lion I had shot (which had been raiding their boma), but they said that their use was for medicine rather than food. We have records, therefore, of Masai eating (or taking to eat) wildebeest, Grant's gazelle, Thomson's gazelle, elephant, buffalo, eland, and kongoni.

Cattle are usually eaten when they die. Cows are rarely slaughtered, although bullocks sometimes are killed for food and prize ones are killed and eaten [562] by men at ceremonies. We have watched women picking up the remains after livestock have been slaughtered, and Millais (1920) spoke of Masai women eating offal and other remains of oxen or sheep after the men were through eating.

231 Bleeding of cows and sheep is accomplished by 272 tying a thong about the animal's neck so the jugular swells, then shooting a partially blocked arrow into the jugular vein and catching the spurting blood in a gourd.

*233
182 every opportunity. There the purpose is primarily to
232 clear new grazing land. During the 30 months of our
824 major study period, we were in sight of the Mau forest (at the foot of the Kau Escarpment) at least twice a month, often in the rains, and only once did we not see smoke from a fire burning in the trees or brush.

*13 Relations with Wildlife
648

The most significant influence the Masai have exerted upon the wildlife is their protection through
[171] excluding hunting tribes from Masailand. The Wanderobo are an exception, but there are relatively so few Wanderobo that they have little effect. The areas of East Africa where the finest assemblages of grassland wildlife still exist are those in Masailand.

224 The animals Masai hunt or have hunted include
[237] buffalo for shields and possibly food, eland for food and
[714] the hides, giraffe for hides and tail hairs (to ornament gourds and dresses,
[531] according to Millais, 1920), lions and sometimes leopard
• [825] for defense and for lion manes, and rhinoceros for horns and to spite national park authorities (particularly
* [233] in the past decade). In times of drought the Masai may spear various animals for defense or to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

*233
*136
224

Masai youths and young Moran may spear any passing animal, possibly to test their skill, but this probably involves relatively few animals in total. It does affect the animals' reactions to the Masai. A Masai driving some livestock, even one cow, is apparently virtually ignored by most wild animals. We watched one Masai drive a lone cow through a herd of 335 wildebeests and 115 zebras. The herd eddied about him at a distance of 20 to 40 yards, and for about a mile he appeared almost a part of the herd, all moving along at about two to three miles per hour. We often saw wild animals grazing in close proximity to Masai livestock and herders. A lone Masai with a spear and no livestock is something else again, and most wildlife will stay nearly 100 yards away from such a person.

857 Masai boys play a game "marking" wild animals. They try to catch young of various species and notch the ears in the same manner as they mark their cattle. Later, when observing the same marked animal they say that it is "my animal." We captured a wildebeest with notched ears in Ngorongoro Crater and a nearby Masai said that it was his wildebeest as he had cut the animal's ears when it was a calf.

232
• 825

As noted above Masai try to avoid wildebeests

232 when they are calving because of the snotsiekte disease.
825 In times of drought they try to drive wild animals away from their water holes. When not in use, these holes are often fenced off with a thorn boma to keep them from the wild animals.

#13 Beyond indirect protection, the greatest ecological influence exerted by Masai on wildlife is through their burning and their livestock. The effects of these processes will be discussed below.

12:Dundas G-5 (ca. 1900) 1908 FL6 Dorobo FL6
Kikuyu FL10
Masai FL12

Supi is said to have instructed the Dorobo to bring him a pair of sandals made of leather having hair on both sides, the Masai to bring him a bull, the dung of which was pure white, and the Kikuyu an animal called Huko (a burrowing rat or mole).

The Dorobo cut off the ears of a donkey, and produced these as the required sandals before Supi; the Masai brought a bull fed on milk only; and the Kikuyu the animal called Huko.

Supi then told each tribe to take its respective charm and to attack the enemy separately and at different points.

The Masai, marching into Kikuyu from Naivasha, fell upon the strangers first, and taking all their stock drove them on to the Kikuyu, who in their turn drove them on to the Dorobo, by whom they were finally routed.

The Somali or Galla were thus disposed of, and only by the name Iregi, which was given to the generation that fought with and expelled them, and by a few women of their tribe, taken prisoners by the Dorobo, are we reminded of their settlements in Kikuyu. Amongst these prisoners may be mentioned an old woman called Barabio, who is still alive and resides in one of Burgo's villages. She was formerly Chief Karuri's nurse.

Needless to say the Masai kept all the cattle which they captured, and this caused a rupture between them and the Dorobo and Kikuyu, who joined forces and waged war on them. After a truce had been made the Dorobo and Kikuyu fought amongst themselves.

If the Kikuyu were to live and increase they had to cultivate the ground, and to do so they were obliged to destroy the forests. The very existence, however, of the Dorobo depended on the preservation of the forests, and hence arose a struggle for survival, which allowed of no compromise and could have but one end.*

In an incredibly short time the great primæval forests, the home of the Dorobo, were destroyed, and with them this interesting people ceased to exist as a tribe. Deprived of the means of living, many died, some took to cultivation, whilst the majority migrated to other regions, where they formed small colonies, such as are to be found at Baringo, Naivasha, Ravine, Kijabe, on Laikipia and Mau, at Taveta, in German East Africa, and even, it is said, in places as remote as Kismayu—(the clan that went to this last place was the Agumba). This scattering of the tribe accounts for the peculiar fact that Dorobo living in widely different localities speak the same language.† The Baringo, Naivasha, Kijabe, and Ravine Dorobo, and those of similar colonies will, if questioned as to where they come from, usually mention Kururuma and Kariran‡ as the birthplace of their fathers.

As regards the origin of this interesting tribe, we know little or nothing. There appear to have been two branches, the Agumba and the Okiek: the former hunted the game on the plains, the latter in the forests. They lived in pits dug in the ground and covered over with leaves of the wild banana; these pits may to this day be seen anywhere in the Kikuyu country, though of course they become more numerous the nearer one approaches the forest. They are also said to have buried their

* The first Kikuyu to come into the country appear to have been almost without exception pastoral, and they accordingly did not interfere at all with the Dorobo. The later arrivals, who seem to have possessed less stock, purchased from individual Dorobo the right to certain pieces of land or forest. For some reason or other just about the time the Somali or Galla were driven out, a sudden very pressing demand for grain appears to have arisen amongst the Kikuyu; this may have been due to one of two causes—the Kikuyu may have lost through sickness a large amount of stock, or there may have been just at this time a sudden influx of agricultural natives.

† Nandi. (In colonies not in touch with Nandi-speaking tribes, the younger generation is rapidly forgetting this language.)

‡ The country lying between the Rivers Boyo and Mathayya in Kikuyu

recovery from their pains. Mbatyan earned outstanding merit through the discovery of a protective vaccination against lung disease of cattle. According to the corresponding accounts of Zendeo and four old Masai, Mbatyan, several years before his death, had already prophesied the appearance of rinderpest that did not take place until after it and the subsequent subduing of the Masai by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in childhood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard. That is, in contrast to the other men, neither the ol oiboni nor the el goiatek and el kiborón mentioned farther below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hairs.
[826]
[302]

791
621
[361]
[595]
[623]
The chief's village consists of a large number of kraals lying close together, several of which serve as the dwelling of the ol oiboni with his numerous wives. Mbatyan had about 200 wives; the still young Zendeo has only 20 of them. No strange man may enter these dwelling kraals of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (el dunganak oirorié ol oiboni) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the marches of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men wandering about idly in the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

In free translation the solo says: who is the leader of the red shields: oh, it is Meleta, who was wounded in the fetlock/Ger. Fessel/, so that his red blood ran into the "mongen" (the fetlock ornament of Colobus skin): literally: who the leader of the red shields, oh, Meleta, who has taken out the blood from his mongen.

832 For judging the beauty of the human body the people in general
826 apply the same principles as the European does.

The Masai idea of beauty calls for a well-built, slender body with slightly rounded forms. In contrast to most other black peoples, among whom corpulence is taken as the measuring stick for feminine beauty, a Masai beauty may not be heavy. Her limbs must show just enough roundness so that they do not appear angular. Further requirements for being regarded as beautiful are: oval face, white teeth, black gums, a skin color as light as possible, protruding buttocks

/125 cont./

832 (without, however, one's being able to speak of steatopygia), robust
826 hips, deep umbilical cavity. The lips must not stand out, either by form or color, so that thin and dark lips are considered beautiful. For
[302] tongue and gums an artificial black coloring is regarded as beautiful:
[824] for this one uses the juice of Clerodendron ternatum (1).

1. Ol oitero 'gischo 'el nijaba.

Prominent muscles in the upper arm and calf or a fat belly are regarded as ugly and are contemptuously compared with the like characteristics of the Negroes, or one also speaks mockingly of club arms, or calves with a goat stomach stuck in them, or of a /126/ diseased swollen abdomen. Among girls one places value on small bones, small, narrow hands and feet, as well as erect, hemispherical
[302] breasts. By means of painting with red earth one seeks to enhance the dark skin color by the contrast of colors.

XV.

000 Weapons. -- Spear. -- Sword. -- Scabbard, belt, shield. -- Club. -- Bow. -- Arrow. -- Firearms.

411 The foremost weapon of the Masai is the well-known, beautiful, large spear /Ill. 41 appears here/ (Fig. 27, see pp. 166 ff.). It constitutes all the pride of the warrior, who would sooner part with anything but that. The spear consists of three parts: the /127/ upper iron blade, the middle wooden shaft, and the lower iron shoe. At the lower end of the blade and at the upper one of the shoe, respectively, one finds a socket by means of which these parts are
411 stuck on the wooden shaft. The ancient spears had blades 30 centi-
178 meters long and 20 centimeters wide, with short sockets, a long wooden shaft, and a short shoe. Gradually the socket of the blade was lengthened up to 40 centimeters, and the shaft was shortened in the same proportion. Such spears are still to be found only rarely today, and then the blade on them has been ground more or less narrow in the course of the years. Later, fashion lengthened the

[412] a sharpened little piece of sheet iron which is called ol moronja (Fig. 62). Before the shaving the hair is moistened with water. The head is usually shaved during the es sobia days, the 18th to [177] 20th day of the month, so that on the unlucky day, ol onjugi, the 17th day of the month, the head is not bald. The shorn hair is tossed into the thorn fence of the kraal. Beard hair and such lashes [412] that grow back into the eye are plucked out with tweezers (Fig. 63 [ol budet]). An exception to this is made by the men of the El [613] kiboron lineage, who are not permitted to pluck out their beard hair [789] because otherwise they would lose their power, in particular the [826] supernatural one that enables them to bring and to conjure away rain.

/156 cont./

802 after the other, from the little finger to the thumb, into the palm of the hand. While one then further counts in like manner on the fingers of the left hand, those of the right one remain closed and only its thumb is moved freely. After turning down the thumb of the left hand, the one counting raises both hands, now [illegible]sed into fists, and says: tomon (= 10). For counting further, o[illegible]ins anew in the same way and does not continue, say, on t[illegible]

[801] [171] The Masai count neither human b[illegible] cattle. It is believed, as the Israelites also did, according to [illegible]ron. 21, that the ones counted would die. Thus, they correctly estimate larger multitudes of living creatures in round numbers, and small ones with quite great certainty. Only dead persons, for example, the fallen warriors, are counted individually.

192 • 826 [754] The names of the fingers might be mentioned here: thumb = ol moruo kitok, that is, the big old one. Index finger = os sogutihoi or ol osokutoni, that is, the sorcerer; if one wants to make someone ill through sorcery, one spreads the magic medicine under the nail of the index finger and, murmuring a curse, one points with it at the person concerned. Middle finger = ol gerĕti, that is, actually the strip of skin worn ringlike on the middle finger. Fourth finger = ńgoto eń genenja, that is, mother of the little finger, which is called eń ginjenje or also eńg ilinda.

802 Ordinals: ol oiturúgu = the first /masc./, ol iaré = the second /masc./, ol ioguni = the third /masc./; eń aiturúgu = the first /fem./, eń iaré = the second /fem./, eń ĕuni = the third /fem./. The /masc./ (the /fem./) (general), ol (eń) abaye; the last in the meaning of the rearmost is called ol abaye ta gorom; the one standing on the right end of a row (to the right of the one judging) is called ol abaye t' eń gaina ertatenne (eń gaina = the hand, ertatenne = on the right). the one standing on the other end, ol abaye t' eń gaina ekediĕnje (ekediĕnje = on the left).

Once is called nabo katá (or nabo gadá); twice, kat' aré; three times, kat' uni, etc.

751 /182 cont./ In order to avoid the onset of a case of diarrhea as a consequence of the very popular copious enjoyment of liquid fat, a root decoction of the above-mentioned ol ama tree (Ximenia americana L.) is administered.

757 [64] Constipation (ol golomi). The most popular remedies in severe cases are a decoction or extraction of the bark of ol jani 'njugi (Embelia kilimandscharica Gilg) mixed with fat, or, in milder cases, the pepperlike grains of ol odoa (Maesa lanceolata Forsk.), which are chewed.

[827] Regarded as aiding digestion is the bark of ol mata (Thespesia Garckeana F. Hoffm. and Dombeya reticulata Mast. vel aff.), of en demgscho, also called ol egurugi (Turraea Volkensii Gürke), which is drunk mixed with meat broth, and of a still unknown Acacia species (ol alili), which is why the warriors, during their meat feasts, add these powdered barks to their drinking water, as well as an extract of the pounded root of ol gbulot (Bridelia cathartica Bert).

"To clean out the stomach" the warriors take, once every three or four months, a medicine called en janigitti, consisting of the bark decoction of ol odoa (Maesa lanceolata), ol mokotan (Albizzia anthelmintica), ol marbait (Croton spec.), ol jani 'njugi (Embelia kilimandscharica Gilg), ol getalamua (Myrica kilimandscharica Engl.), os sugurtuti or ol dinjai (Cissus quadrangularis).

As Tonicum roborans /strengthening tonic/ and beautifying agent, pulverized bark of ol dimigommi (Pappea capensis Eckl. et Zeyh.) is added to the drinking water. It is supposed to make the skin softer and more elastic, as well as to give rise to an increase in the padding of fat through which sharp contours are rounded. The remedy is especially popular among warriors.

[826]

757 [64] For liver pains (aia g munjwa) one drinks a decoction of the bark of os sodjo (Euclea fructuosa).

For spleen pains and spleen swelling (aia ol dasin), the powdered bark of the same tree, stirred to a paste with honey, is eaten or, mixed with honey beer, is drunk, as is a root decoction of os senetoi (Cassia didymobotrya Fres.), which as a rule is mixed with milk.

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai stasala, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always; I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaÑ days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a [272] [237] [415] [824] [539] buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol'oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

782 783 If a small child of one not long detached from the warrior [784] standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the Il kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near Il kiboron kraals are not rare.

775
825
826
613

/210 cont./
Allegedly they never bite the El kiboron people; on the other hand the latter often use them as frightening devices against both Masai and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Ngnaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Ngnaunir is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise 'Ngnaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (en sikin), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and 789 the execution of special gestures. The aforementioned amulet ring [751] (ol geretti) protects one against the effect of magic made by another [754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The [842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' eñ gehita feast. The eñ gogunoi is tied around the ankle and protects one from ailments of the legs. The ol dungel [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorrá protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

/275 cont./

*539 Lemajas married Kibubet. Four days after her birth the paternal kraal had burned down, which is why she was named after the leaping flames (ei gibubete). She gave birth first to the boy Learín, a name that means "much rain," and then in later years to the son Tumbene, since she said at the birth of the latter: "tendob bîrum" = finally I have received.

Learín married Naslanda, who bore him Tumbaihôk. He was named this after the root hotihat, which his mother ate with special liking during the last months before his birth.

Tumbaihot was a devout man whom God loved. He married Naipande, who bore him three sons. The eldest was given the name Ochomó, meaning the son and heir, because shortly before his birth an epidemic had carried off, besides many other people, also the male relatives of Tumbaihot. The second son was called Bartimaus; later on he became a judge, the one presiding in the council of elders. The third son was given the name Barmao, after a song of supplication popular at that time, in which the words "barmao (2),

> 2. ei mao, the twins; ba-mao, or, for euphony, barmao, is the one who gives twins; therefore in the above song, in the meaning: "You, who gives us twins," whereby the word "twins" represents an intensification, based on joy and gratitude, of the idea of "children." Cf. also the term of address ba-mao in Part 2, III.

oh, 'Ng ai stasala" kept recurring.

/276/ Tumbaihot had adopted Ledgéni, from the El dengs people, as a brother. He had asked him for admission into his kraal, and soon an intimate friendship had closely united the two. When Ledgéni died, Tumbaihot married his childless widow Nahabe-loguaja, who owed her name to her high, narrow head (1). • [826]

> 1. This head shape corresponds to the ideal ideal of beauty. Nahabe-loguaja's father was called Ol jano, her mother Dgoi.

/312 cont./

*121 Among the Maasai and the ancient Israelites the entire law, the
*193 natural and moral order, consists of precepts and interdicts of God.
*191 He commands the human beings to do good, he forbids them to do
*589 evil. He is the teacher of human beings in the distinction between
[996] good and evil, so that this ability to differentiate is one of his foremost characteristics even in the religious view of a primitive people.

The idea of the tree of life presupposes the desire for another characteristic inherent in God, for eternal life not limited by death. Now, however, is such a desire present in the feeling and yearning of a savage, culture-poor man? The extraordinary contempt for human life, the absence of mourning going beyond the customary interment ceremony, the idea that death brings sleep to the aged, rest from earthly life, answer the question negatively. The desire for long life is the result of a higher culture, and, indeed it is the civilized man who wishes for an eternal life on earth, but not the member of a primitive people.

I suspect, therefore, that the Israelitish original conception of paradise knew of only one tree, without any more detailed designation, "the tree concerning which I commanded thee not to eat any of it," as Jahve /Yahweh/ designates it in Genesis 3, 11.

The adoption of the tree of life, which may have come from Babylonian myth, then gave the originally one tree the addition "of the knowledge of good and evil."

In the Biblical presentation and in that of the Maasai we find the picture of the tempting of the woman by the snake, which though that is represented as the symbol of evil, of sin. For the Maasai this interpretation is still to be found in some of their customs. We saw
[813] that the members of the lineage of the Il kiboron, peaceful, and
[825] therefore particularly beloved of God, do not fear snakes, and,
• [826] further, they believe that the bones of their interred dead turn into snakes. Proceeding on the assumption that the story of the fall is the primary one, the first-mentioned belief in the naïve form of the primitive peoples shows that those living according to God's commands and illumined by his grace /313/ need not fear the power that evil has over man, whereas the second view demonstrates that what is sinful in man remains on earth and goes on living after his death.

/NET sent./

824 [illegible] (Dichostachys cinerea Wh.). The hunter seeking game in rain thinks he will quickly find it after breaking off a twig.

[illegible] (Rothalia Kilimandscharica Gilg.). Acts as a laxative and, in larger doses, is regarded as an agent for driving away tsetses and mosquito. The cold extract of two handfuls of bark is warmed and mixed with fat, meat broth, or milk before being taken.

[illegible] (?)

1. The plant is also called [illegible].

[illegible] (Helicropiaus mitgeeum Willd.). Small-livestock fodder. The person spending the night alone in nappe or bush lies to use a few plants into his campfire as protective magic against all kinds of dangers.

[illegible] (Pennisetum ciliare Link). Good fodder grass for cattle.

[illegible] (?). Good fodder for small livestock.

[illegible] (Acacia seyal Del.). It is one of the milder mimosa-barks taken at the lower coasts of the wanlam. A piece of bark approximately a handbreadth wide and 30 cm. long is powdered and then steeped in cold water. This quantity is the simple dose per person per day.

[illegible] (Barleria spec.).

[illegible] (Euphorbia velutina Pax.). Small-livestock fodder.

[illegible] (Euphorbia spec.). In order to simulate a circumcision, boys smear the glans with the milky juice. The glans swells /NOW/ because of this and prevents the drawn-back foreskin from slipping forward.

[illegible] (Clayria spec.).

[illegible] (Euphorbia Schimperi Pres.). Regarded as poisonous.

[illegible]. Good fodder for small livestock.

[illegible] (Sarcostemma trabrinus E. Sch.). The scabbard of the sword is made out of the wood.

239 [illegible] water skins. The gourds are grown by nearby cultivators
[illegible] and purchased or traded by the Masai. The calabashes
(144) are cleaned between usings by washing in water (if
available) and then purified with a mixture of urine and
wood ash. After being carried in one of these containers
the milk has a rather characteristic, somewhat smoky-
sweet taste that may stay with one for several days.

243 The maize meal is purchased or traded from the
Kikuyu or trading post cum general stores which are
found at Narok, Loitokitok, and at other points around
the periphery of the area.

242 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for
who in the tribe might eat what kind of meat, and at
[illegible] what times. Apparently the warriors had a right to
demand milk and sometimes meat from anyone, at least
in their section. Milk and meat were not to be consumed
on the same day, but blood could be mixed with the milk.

[illegible] When not fighting the warriors could carry out
[illegible] an olpul, or meat camp. They would take goats or a
bullock and make camp in the bush, kill and eat the
animals. The olpul might take from a week to a month,
[illegible] depending on the available time and meat. We presume that

701 the principle was that the meat and blood strengthened
[826] the warriors for fighting. We periodically came upon
[252] moran cooking fresh meat. It was usually goat or sheep, although occasionally bovine, and they cooked it either by skewering pieces on green limbs which they held over the fire, or by placing the strips of meat on a wooden
[857] grill above the fire. Youngish children usually
701 accompanied the moran. Gower (1948:79) notes that in
562 Tanganyika Masailand:

> At an olpul a few moran (warriors) will go into the bush and slaughter a bullock or goats. They take with them a few uncircumcised boys and girls. They camp in the bush for any period from 10 to 30 days, depending on how many bullocks they have to slaughter. For the first few days they eat the meat roasted and cooked; thereafter they subsist on soup. The Masai consider that this diet gives considerable strength.

We never observed moran cooking meat far out in the bush. Usually these feasts were close to a boma.

We were told that eland and buffalo were considered close enough to cows to be proper food for Masai and this was also postulated by Grzimek and Grzimek (1960a)
562 and described by Huntingford (1953:109). The women
[843] apparently could eat game meat, especially gazelles, during pregnancy. From the reception of the meat we brought to bomas, we believe that in addition to women and children elders and a few moran will gladly

FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organisation, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to [illegible] idea, although he carefully inquired.

778 825 Eata sii en-giahōmi naji 'l-Tarōsero 'l-asuria lenye sambu. Naa, ten ŝarare ol-tuŋgani loo-'l-Tarōsero ol-likae, pe meitēu, neipot 'l-asuria lenyena, nējo: 'E-sile e-'ng-aji e-yēyo, talakunye!' Naa, ten eitu ekwet lidoŝarare, nepwōnu, 'l-asuria aaony.

The Tarosero family have their own particular snakes, which are of many hues; and when a member of this family fights with some one and gets the worst of the combat, he calls upon his snakes, and says: 'The avengers of my mother's house, come out!' If the man with whom he is fighting does not run away, the snakes will come and bite him.

[614] Eata sii kulye-ehomīto 'l-asuria lenye. Etii 'l-asuria coibor, netii 'l-conyokyo, netii sii 'l-conyori. Etii 'l-kulikae coata en-dōki natii e-murt anaa ol-kila lo-'l-móruo, neibor kulikae 'l-lughuny anaa el-móruo kitok.

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Ēji sii eata 'l-oibonok 'l-kulenyena cotii ol-bena.

The medicine-men are also said to have snakes, which they keep in their bags.

766 775 791 Nēji ten ēā kulikae-tuŋganak kituak anaa 'M-Batyany, ere pe enukari, nepwo 'l-tauja lenye eng-ai.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 828 Ten eirura ol-tuŋgani, nemebuaki likae-tuŋgani ainyēye. Einyēye akiti, amu ēji: 'Ebaiki meidim el-tau lenye atorinyunye, nēā.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

795 825 Ēje 'l-Maasae metii 'l-menēŋa, amu medol; kake ēji edol in-giahu, naa ten eiāgurua 'n-giahu pōkin e-wēji nēbo, nēji edol il-menēŋa arakí el-ōwaru.

The Masai say there are no such things as ghosts because they do not see them. But it is supposed that cattle see them, and when a herd of cattle all gaze at one spot, they are said to be looking at either a ghost or a beast of prey.

[1] Vide p. 306.

If however there is to be no left-hand circumcision the *Il piron* elders arrange to hold the fire-drilling ceremony. 561

This ceremony finally binds together the *Il piron* elders and their moran charges. The warriors and the *Il piron* elders decide on the suitable site for the first warrior village. The warriors, together with their mothers, sisters and cattle move in close to the site chosen and for the time being occupy any deserted village in the vicinity. When the warriors announce that they are in readiness, the elders give orders that on the morrow all the cattle are to move to a new village. Next morning at sunrise, the *Il piron* tell the warriors to bring the heifers, four *suria*, four calves (all black). The heifers must have perfect eyes, straight tails, each must have four teats, in fact they must be perfect in every way. The warriors must find also a young bull, either a black one, or a fawn one; it must be perfect in eye, have erect horns, and its dam must still be alive.

The warriors are warned that after the ceremony, the bull must not be castrated, or sold, or slaughtered for food.

The nine cattle having been selected, eight moran are called for, and eight girls. The warriors must have unblemished eyes, must not have killed a Masai, or have committed any serious offence against tribal laws; also they must not all be right-handed. [828]

The girls, too, must be free from blemish and must not have reached the age of puberty. The warriors don a short coat of black calf skin, make a circle of white round the eyes, down each cheek meeting under the chin, and each carries a bow in his hand. The warriors and girls then drive the cattle to the centre of the chosen site and prevent them from running away. The rest of the warriors watch this proceeding until as soon as the ceremonial bull and the heifer have taken up their positions; the remainder are driven forward to the waiting group. The warriors then seize the ceremonial bull by the horns and twist its head so that the right side of its face is uppermost. A piece of hide which must have been cut from the back of an ox which when slaughtered was found to be in perfect health, is then placed on the bull's upturned face. The *Il piron* elders who performed the first ceremony were dressed in robes made from sheep skins. New fire-sticks are then produced, placed on the bull's cheek and fire made by drilling, by the *Il piron* elders. [292 302] [372]

The smouldering charred wood falls on the hide, pieces of frayed cedar bark are added, and the glowing ember is blown into a flame, when a fire will start with dry clean wood. The fire is then placed on the ground in the centre of the village; the place is given the name *osingo*. Large pieces of wood are added. One elder is then left to look after the fire whilst the others walk in a circle round the assembled

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

are taken in another direction, which means that they drink only on alternate days, but at the same time graze over a larger area than if they went to water every day, thus helping to conserve the grazing. There are two types of kraal. The married men with their wives and children live in one type, and the warriors with their mothers, sisters, and girl lovers in another type. The main structural difference between the two types seems to be that the warriors' kraal has no fence, while the elders' kraal is surrounded by a thorn fence. The elders' kraal varies in size: it may contain from seven to several hundred huts, though very large examples (such as were seen by Teleki and von Höhnel) are probably uncommon; the average is probably about 20 to 50. The warriors' kraal may contain between 50 and 100. In the elders' kraal the huts are built round the inside of the fence, which is also the enclosure in which the livestock are housed at night. The number of gates in the fence depends upon the number and size of the families which live in it. Each family has exclusive rights over at least one gate, and a large family with many cattle has more than one. The kraal, *enk-ang*, thus approximates to a village, for several families live in it, and the gate, *kishomi*, has come to typify the family, the word being used with the article (*en-kishomi*) as a synonym for *el-maroi*, "the family." When a man sets up his home in a kraal, he puts his first wife in a hut on the right of his gate as one goes in, and the second wife on the left; the third, if he has one, goes on the right, and the fourth on the left, and so on, the huts being so arranged that each succeeding wife lives immediately to the right or left of her gate. The people on each side of the gate form two distinct groups, *in-takiskis*, the effect of which is felt most in matters of inheritance. (See below, p. 108.) The warriors' kraal or *e-manyata* is inhabited by all the members of one age-set in one district, who constitute a company, *siai*, and the kraals are built in strategic positions. With the men live their mothers, and some young sisters who help their mothers, and if old enough become lovers of warriors. The mother, her warrior son, and younger children share a hut, all sleeping on separate beds; when the warrior wants to sleep with his lover he goes to another hut. The mother's husband may visit her at any time, and when he comes her hut must be given up to the pair. The inhabitants of a *manyata* vary considerably in number, ranging from 30 to several hundred.

Livestock

Cattle

Cattle, *in-kiku*, are the object on which the lives of the Masai are centred, and on which their whole existence depends. Their importance is both material and spiritual, and people who perform any kind of work other than tending cattle are despised by the Masai, whose attitude towards cattle is similar to that of the Nandi. The Masai believe that in the beginning God gave them all the cattle in the world, and therefore nobody else has a right to possess any. Cattle provide the Masai warrior with his food in the form of milk, blood, and meat, and they give him spiritual and mental satisfaction through their existence, though it would seem that there is less outward and ritual expression of the love of cattle than among some other East African tribes who combine pastoralism with agriculture. This, however, does not by any means indicate that the Masai are an agricultural people who have wholly given up agriculture and taken to pastoralism. Since the Masai, unlike the Nandi, kill large numbers of their cattle for eating, it was essential in the past for them to maintain the size of their herds by continual raiding, for the natural reproduction rate would not have been enough. On account of its high ritual value, milk may not be drunk on the same day that meat is eaten, nor may it be boiled; but it may be drunk mixed with blood. Grass also has a high ritual value, being the food of cattle, and is used as a sign of peace. In 1930 the average size of an elder's herd was officially estimated at about 75 head of cattle, 60 sheep and goats, and 10 donkeys; this was based on the estimate of 720,000 as the total number of cattle belonging to the Kenya Masai. In Tanganyika, it was found that the average number

supported the roof with his fore-paws, for he had no tusks. Whereupon the wart-hog said: 'You are stronger than me. Hold up the roof with all your might while I run out for some timber to prop it up.' The lion, flattered, agreed, and the wart-hog ran out and quickly made his escape."

(History does not relate how long the lion remained holding up the roof before he realised that he had been duped by the cunning wart-hog. This story is very popular and is always received with roars of laughter.)[1]

D [539]

The Dorobo plays the part of buffoon or low comedian in many Masai folk-tales.[2] The Dorobo themselves are well aware of this and regard it as a huge joke. A tale told by a Masai in which a Dorobo figures in an absurd light generally elicits hearty applause from the Dorobo present. I select the following example.

M 539 829

The Dorobo and the Cow.—The Dorobo is an impatient man. Once he was given a cow, and some days afterwards this cow was crossed by a bull. The Dorobo waited a month. Then he waited another month. He tried to milk the cow, but no milk would come. He thereupon said: "What sort of a cow is this? It will not give birth; it has no milk; it is altogether unsatisfactory." He then went away to sleep, saying: "Perhaps it will have given birth by the time it is morning." In the morning, all was as it had been before and the efforts of the Dorobo to milk the cow met with no more success. The Dorobo, who was determined at least to obtain milk, thereupon seized his knife and split up the cow's udder (for all Dorobo are impatient men), but no milk came, and his knife penetrating too deeply, the intestines of the cow fell out and it died. The Dorobo was very surprised and said: "This is a bad kind of cow and I do not understand it." He then proceeded to eat the meat until it was all finished.

M 539

R 171 538

I was surprised to discover so little resemblance between *Mósiro* folk-lore and folk-tales and those of the Nandi as given in Sir Claud Hollis's book. There is more affinity between the *Mósiro* and the Masai in this respect. This may perhaps be explained by the comparatively long period the *Mósiro* must

[1] [Some Bantu tribes tell it of the Hare.—A. W.]

[For Masai traditions of contact with non-Masai peoples during the "primeval age of the Masai" migrations, along with a brief cultural sketch of each group, see category 116, pp. 385-400.]

M /9 cont./
192 in that it was taken as a tribal name, and people spoke of ol olkob-
101 Masai and ol olkob-Wakuafi. El olkob (sing. ol olkobani) means killers, rough, brutal persons, and is an invective with which the Wandorobo, Wakuafi, and the Masai blacksmiths (el konono) designate their oppressors, the Masai. Fischer mistakenly translates the word as "owners of the land": this, however, would be called: ol opén l eh gob.

M The Wakuafi live in their colonies as more or less peaceful,
619 sedentary cultivators. Wherever they found peaceful neighbors after
184 their defeats, they too became calm. On the other hand, where
181 they remained in close contact with the Masai and were exposed to their constant raids, the old bellicosity remained in them. An example of this is the population of Meruberg /Mt. Meru/ in the
M Great Arusha /Arusha/ and Meru areas. In spite of a very con-
[144] siderable mixture with Wadschagga from nearby Kilimandscharo, they have completely kept their original character traits. Their
M imperiousness, rapacity, and cunning equal that of the Masai; in
[648] courage, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakuafi and Masai
M is in general not bad. The latter regard the former as fellow tribes-
• 829 men, even though as inferior ones, because they work the soil
619 and own only a little livestock. They are foes one minute and
[241] friends the next! And both must always reconcile themselves to
[231] each other, for the Masai cannot do without them as suppliers of
[438] vegetable foods, after the rinderpest at the end of the eighties
[731] again raged so destructively among their herds.

D While among the Wakuafi one can still clearly recognize
105 their one-time power and greatness, this is no longer the case at all among the Aaí. Most of them, just like the El aahi, timidly and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they still will poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild berries, roots, and herbs. Where they dwell in the vicinity of the Masai, they live in a certain

D 105 /9 cont./

dependency on them. A caravan traveling across the steppes certainly does not remain hidden from the Wandoróbo roaming about everywhere. /10/ Their betrayal soon causes it to fall victim to the spoils-hungry Masai. Through their poverty and the contemptible endeavor to make up for the lack of slaughter animals through the killing of game, the Wandoróbo, to be sure, stand especially low in the estimation of the Masai, yet the latter do not deny the connection with their old fellow tribesmen to the extent that they do not grant individual Wandoróbo, as well as El lumbua and El mull, admission into their community.

M [829] [177]

M 101 184 177

In recent times those Masai who, after the loss of their livestock, have become detached from the larger community and live in small kraals in relative poverty, still generally reckon themselves as belonging to the El dorobbo, without, however, counting themselves within one of the three branches -- Aná, El aitt, El gasunk. Often they live together with a few Wakuafi, sometimes one also finds one or several Wandoróbo families among them. Their property consists of a few cows and donkeys, a couple of goats and sheep. Since they cannot subsist on these, they also cultivate maize, batatas, etc. here and there and devote themselves to hunting with bow and arrow.

M 648

The influence that the Masai people exerted and still exert on the settled peoples who live on the borders of the steppes dominated by them for centuries is very great. Just as formerly it was the Wandoróbo, now it is the Wakuafi and Masai to whose influence the surrounding peoples must submit. What qualified the Masai for this lordly position is their relatively high cultural level: what made possible their reaching this position, their strict organization and their war-mindedness. This is not the place to analyze why the culture of the Masai is a higher one than that of individual Negroes surrounding them. It should only be pointed out that among almost all of these, in contrast to the former,

M [181]

000

M 614 [196] /18/ The 'L aiser and El molelijan to a certain extent stand in contrast to the El molegana, whom they half-mockingly, half-abusively also call 'N dalata-gutuk (1)

M [192] 1. 'N dalata, glutton, ee gutuk, the mouth: by putting the two words together the idea of the fire is supposed to be intensified.

or Eig-adji-nagil-aisi (2).

M [192] 2. : the house of the hard teeth: nagil a hard, ai aisi, the teeth.

M [193] [199] and, in contradistinction to them, designate themselves as Eig adji el masai. As the reason for this, tradition relates that the El molegana were once separated for a longer period of time from the other two tribes and, upon reuniting, made a bad impression because they no longer observed the divine commandment forbidding the killing of female animals for consumption. This gave rise to the above nicknames, which, freely translated, mean "greedy glutton."

M 613 The El bedjo and El gurú are not infrequently designated as El kingeta, a name formed after that of a war leader, Ole nagil. As the reason for the combination, it was said that members of the two sublineages were once notorious cattle thieves.

M 791 The most commanding lineage, not only of the 'L aiser tribe, but of the whole Masai people, is the El ginak, because both the [613] [199] family of the chief (ol oibon) and that of the seer (el gutuk) belong to it. The designation "chief" is actually not quite correct, since the ol oibon does not rule directly and does not exercise any M [229] real executive power. He rules only indirectly: he firm belief of his subjects in his prophetdom and in his supernatural ability of sorcery gives him an influence over the decisions of the people. D [791] Despotism and cruelty, such as we find among all Bagro rulers, are foreign to him. He is less a ruler than a national saint or a patriarch, to whom the Wakuafi and Ada also see their head. The people speak of his mainly power in timid awe, and no one would

/100 cont./

728
648

lasting conclusion of friendship between Europeans and Masai so completely impossible, both on the basis of an experience of almost eight years and also according to the statements of a large number of Masai, who, in the course of a long personal acquaintance, gained so much confidence as to express themselves frankly about this point. According to their view a friendship, in whatever form it might be concluded, would only ever have the result that individual persons in the service of the Europeans concerned would find a hospitable reception in the Masai kraals. It could no more bring about a lasting friendship than it would induce the Masai to follow the orders and the laws of the Europeans.

[129]

[439]

On the other hand, if the Masai seriously mean peace because the tribe warred upon lives close to them and they are dependent on it for buying vegetable food there (as, for example, in the above-mentioned Kabe), they make an ormata oishaechage ñ gera = suckling of exchanged children. After they have sent off an old man, as before, and he has returned together with a few foreign old men, it is agreed in consultation that the Kabe chief, a Kabe woman with a suckling child, and a number /101/ of witnesses should come to a certain designated place in the steppe between Kabe and the Masai kraals. At the appointed time, there will also be found there a woman from the Masai (not a true Masai, however, but one from another tribe captured in a previous war) with a suckling child, as well as the speaker, the leaders, and other warriors as witnesses. The two women now exchange their children, and each puts the foreign child to her breast for a moment. They then take the children on their backs in the leather apron and conclude blood friendship with each other. One of the witnesses makes a few incisions in the skin of the abdomen of each of the two women and hands her a small piece of the heart of a just slaughtered head of livestock. After each one has wiped off the blood coming out of her cut with this, she sticks it in the mouth of the other. While this ceremony is going on, the speaker and the chief of Kabe affirm eternal friendship in the name of their peoples: they call upon God as their witness and pray to him that he might exterminate them if they do not maintain the friendship. Every conclusion of peace has as its consequence the obligation for mutual hospitality.

/112 cont./

because he thinks a misfortune will be conjured up by it. It is feared that a lion would get into the kraal or the camp at night or that the enemy would carry out an attack. To call someone "el kaoori" is regarded by the other Maori as a strongly insulting invective expressing contempt.

The contempt toward blacksmiths is based on the view that the blacksmiths are unclean. God forbade human beings the shedding of blood. By making weapons, the chief product of the blacksmiths among primitive peoples, they induce transgression of the divine commandment, work against the latter. Hence they are condemned by God, and therefore they are regarded by their fellowmen as unclean, contemptible, bringing misfortune. Daily observation also teaches -- so the Maori say -- that God does not love blacksmiths, for a blacksmith actually never becomes prosperous; if he should happen to become wealthy, however, he would soon die, without being able to enjoy his property.

It should expressly be brought out here that, despite all the efforts devoted to it, I have not been able to determine the slightest somatic difference between blacksmiths and non-blacksmiths and that all non-blacksmiths questioned by me (there were several hundred) described the blacksmiths as pure, unmixed members of the Maori people, which the blacksmiths themselves also maintain without exception (1).

1. Obviously the Maori blacksmiths speak the Maori Language and not another one of their own, as had been supposed from the statement by C. Hallie in his book, The Maori, their language and folklore, Oxford, 1901, p. 111. Hallie says there /the question is in English/: "The smiths have their own language, which, although a corruption of Maori, is not understood by the ordinary Maori. See all of /this footnote is continued on the next page in the original source/ them can speak this language; it is only a certain number of them who know it." This statement by Hallie is er-

/116 cont./
the wires of the blacksmiths. Smaller ornamental objects of wire are made by the other Mawi women. The small chains of iron and copper wire are not made by the Mawi themselves, but are bought ready-made from the caravan people or the sedentary neighboring tribes.

XIV.

000 Character. -- National pride. -- Disrespect for foreigners. -- Designation of foreigners. -- The Mawi in the service of the Europeans. -- Attitude of the Mawi living among his people toward the Europeans. -- The Mawi toward their kind. -- Hospitality -- Position of the women. -- How the Negro illustrates the character of the Mawi. -- Expression of emotions and other gestures. -- Strength of vision. -- Ear sense. -- Color sense. -- Orientation ability. -- Song. -- Level of beauty of the human body.

116 The most outstanding trait in the character of the Mawi is their national pride which is based on the religious view that they are the chosen people of God. God created the world and all that is in it only for them. All non-Mawi are subject to the Mawi people and their property belongs to them. This explains the haughtiness and the deep disdain toward the sedentary Negroes, who are not familiar with Nyasi and have no share in the good things created by him and who therefore are compelled to wrest their daily food from the soil in the sweat of work. On the other hand, God cares for the Mawi as for his children, they need not worry "ni dakiye ndji ndji" a work is not good, everything belongs to them anyway, and, since the Negroes do not give it voluntarily, the Mawi take it by force. In fact, the Negro, in the opinion of the Mawi, only has justification for existence as keeper of the livestock created by Nyasi for the Mawi.

116 In general the Mawi designates all non-Mawi as ni mag ning, ni nagib, a term that is to be translated as "subjection." /117/ The Mawi does not know friendship and loyalty toward the

/PL13 sheet/

186 subdivision, every trick, every deception is perceived against them.
(101) In particular other names exist for distinctions. For the tribes certainly related to them these names are derived from their places of residence, in connection with which it is to be noted that for these the blacks have their own nomenclature. For Europeans he uses the 3 strokes derived or transferred from the Elizabeth. Finally, he calls the Degrees ai makai (resp. ai makaimbi), which is to be translated appropriately with "the savages" and corresponds to the word Wrackness with which most the people designate the Degrees of the interior.

181 The first impression which the blacks, in comparison with the Degrees, makes on the European is definitely very much to his advantage. The handsome, tall figures are charming in themselves from the free and often noble haughtiness and lassitude appear as pride and caution, which stand in pleasant contrast to the hypocritically fawning, grovelling submission of the Degrees.

• 182 A certain distinction is really not to be denied the blacks. In this respect he stand high above the average Degre. It is significant that for him only the threating weapon -- spear and sword -- is regarded as worthy of a Degre. He has a profound contempt for the Degre heads dwelling with poisoned arrows treacherously from the bush, whereas he judges this situation more leniently in connection with the Tonga in the process of dairy decline, who are able to master only very savage fighting farces. He therefore also condemns the use of guns, at least in part, by the divisions, numerically weak, of the Pamwaweze Tonga. It seems to him justified against the poisoned arrows, but he does not by any means regard it as noble and decent compared with his threating weapons. Thus, a small blacks youth, who was in my service for several years as a boy, often reproached me in the shrewdest way.

/PL12 cont./

179 this and discovered to his sorrow that the cows had wasted away in
181 the last few weeks to the point of being unrecognizable. If he had
609 examined them more closely, he would also have found that they
822 had aged several years in the preceding month. But he had no
thought of any dishonesty of the people, whom he considered
honorable and good, until after more than 100 of his finest cows
had been exchanged for old, worthless ones and he had unexpect-
edly marked all of the latter. One could cite a whole series of
such examples instructive for the settler, but here let there be
pointed out only one particularly popular trick. When in the evening
the livestock of the settler is driven to water, the native stock-
owners -- both Masai and Negroes -- also like to drive their herds
into the vicinity of this watering place. In the press and haste of the
livestock for the water, these run into the herd of the European, as
intended, a few head of the cattle of the Black, who now, instead of
taking his stock out of the strange herd again, moves off with a
corresponding number of the settler's best cattle.

179 When the Masai servant who regularly invested his savings in
181 cattle has assembled a small herd, he often enough leaves service
609 in order to return again to his people. If an opportunity presents
822 itself, it may happen that he now serves his compatriots as a spy
against his former master. Uncircumcised youths who hire themselves
out as boys return to their native kraals for circumcision. Live there
a few years with their contemporaries in the usual manner, and then
often go back into service.

179 The Masai living in the tribe is and remains mistrustful of every
181 European whom he has not become intimately acquainted with
609 through the years. He regards the latter's honesty and forbearance
822 as weakness and believes that it is only because of a lack of strength
and cleverness that the European does not oppress him just as he him-
self has his wife/s/ and his Negroes. He performs a service for the European
only in order /118/ to have some -- often enough illegal -- benefits
from it. If he concludes friendship with him, it is done merely for
the sake of appearances and a momentary advantage. As one accused,
he almost never confesses, even with guilt proved, but rather, asserts
with profound indignation: "A Masai does not do anything like

/119 cont./

177 181 609 829 that" (1).

> 1. When, after receiving news of an ugly misdemeanor or crime, I spoke to one or another more trustworthy Masai about the unknown culprit, I often heard: It was surely not a Masai. A Masai would not do anything like that. Such things do not happen among the Masai.

Though he may know better, he accuses an ol mōjo just as unhesitatingly as he absolves a fellow tribesman (2).

[564] [326]

> 2. It may be mentioned here that, according to my observation, the insincerity and dishonesty of the people belonging to the blacksmith caste are decidedly greater than that of the other Masai, so that it seems as if the contempt and bad treatment that the former experience from the latter have bred an inferiority of character in the course of the millenniums.

829 The mental superiority of the European impresses him only in such cases where it has convicted him of some villainy, while his technical skills reek far too much of the despised "ol kaanni" to the Masai to seem worth notice. It is solely the guns of the Protectorate Troops that obtain for the white man respect and influence among the Masai and have made this manner race of East Africa somewhat more modest.

186 181 The picture becomes more gratifying if one observes the Masai in intercourse with his own kind. Dekirē eā gunok eidai ol masai * make a good mouth toward the Masai, that is, be good, friendly, sincere toward your fellow tribesmen.

/501 cont./

539 the kraal for a short time. The foreign woman stuck the two children in a large wooden pot and threw it into the nearby river, which carried it far away. Then, both hands full of cattle blood, she waited in the hut doorway for the mother of the little ones and, when she came home, smeared her face with the blood and ran out screaming, accusing the other one of having devoured her own children. When the people saw the blood on the face of the one accused, they believed the accusation. The man divorced his wife and inflicted on her the punishment that she was to tend his donkeys until her death. Then he married the other woman. Meanwhile the two children had been adopted by a distant tribe. Children who were playing on the bank had seen the pot arrive, caught it, and carried it to their father. There the boys grew up to be warriors. One day a war expedition was undertaken against the Masai and these two were sent ahead as spies. In the vicinity of a Masai kraal they found an old woman who was herding donkeys. Since it is not customary for women to herd, they asked her why she was doing this work. Then she told them the story of her misfortune and the injustice done to her (1).

> 1. In Hollis, p. 197, the variation " and made themselves known as her sons." Ed. Manual.

When the warriors saw the hatred of the woman against the members of her tribe, they disclosed to her their plan and obtained the assistance of the old woman. After they had quickly killed the boys tending the livestock, they took a bell from the neck of a head of cattle and hung it on a donkey. They tied the latter very close to a tree so that it constantly cried out and rang the bell. The Masai in the kraal heard this and assumed that livestock and donkeys were peacefully grazing. In the meantime, /502/ however, the warriors had made away with the herd and had taken the old woman along out of gratitude for her help.

539 /501 /502 Finally there should be repeated a little story in which a Masai, returning from the Berliner Kolonial-Ausstellung /Berlin Colonial Exposition/ of 1896, told his countrymen about a custom observed there. He said: "In Germany little children do not get food from their mothers (as among us), but they are herded there like small livestock. On the street stand tables, and on these lie plates. When

539
177
829

/539 cont./
the best of children arrives, the children sit down at the tables and eat. When they have finished eating, they are driven on." -- He had seen the pupils of a school, who were being conducted through the exposition.

Proverbs

539

Mgri ni dalgaai bangi ni ngaai' ngin = There is not a human being who does not have his head. (Many heads, many minds.)

Mgri ni dalgaai bangi dabir ni dag' ngin ngaingin = There is no human being who does not do his business according to his plan.

Ni dalgaai ngin ngdin ngdbire = The person who wants to, can do. (Where there is a will, there is a way.)

Ni ir ngaan, ni ari dalai = A bad year, a good year in the same sh nonbine follows rain.

Ni dalgaai gnbin dard i ngu bain bere = A stupid person is heaven with little things. (One gets to a stupid one with trifling means.)

Ni jamaire bamsch ng dalaa = It is not good to have many friends.

Ni ari dalai bain ngdin ni ngaan = A good year is followed by a bad one: in the same sh Pride goeth before a fall.

Ni dalgaai ngire 'n dagi ngire ni jamaire bamsch, ni dalgaai bangin 'n dagi ngire bangi = A rich person has many friends, a poor person has nothing. (A friend in need is a friend indeed.)

Ni dalgaaab gre ngindin dalaa, ngingi jagi ngingi 'n dagi = Few people are good if we want something (from them).

Yaadin 'i gaadin ni dalgaaa' bagin, bain ngdbaa ni ngaai' ngin = Listen to everyone's advice, but follow your head.

Gdin dalgaaa' i ngaaraa ngdbin (ni) ngin bangi, gdin dalgaaa' i ngaaraa ngdin ngdbin (ni) ngin dalaa = One's own people know nothing, strange people know fine words. The proverb has the meaning of "No man is a prophet in his own country."

Ni dalgaai ngdbin ngdin ngdbaa dalgaai ngaai i ni ngdg i ngin = A weak person can conquer a strong person through his intelligence.

Alaa ngdi 'n dagi, bai-dagi ni daa = First this matter, then the food. (Work before pleasure.)

/714 mss./

The Kenites of the Bible -- the Smiths of the Mewi

*121 *171 326 624

The Bible mentions as the first blacksmith Tubal-Kain /Tubal-Cain/, the son of Lamech by his second wife, Zillah /Zillah/ (Gen. 4, 22). The name is made up of two words, the latter of which shall be discussed first. Kain /Cain/ is mentioned in two places in the Jahvist /Yahwist/ source: first Gen. 4, 1 as the eldest son of Adam and as the first tiller of the ground, and then in the same chapter, Verse 17, in the list of Sethites. In Gen. 5 the Priestly Document gives the table of the Sethites and in it calls Kain Kenan /Cainan/ (Verse 9), i.e., blacksmith. Now Kenan is the same word as ni kenani (pl. ni kenanim) of the Mewi or kinigadschani /???/ (pl. kinadschani) of the Tuaga, among both of whom it also means blacksmith. The other part of the name, Tubal, we find among the Semai in tunbi, among the Abyssinians in tubalanu, among the Galla in tumu, everywhere with the meaning "blacksmith."

According to Gen. 4, Kain was a tiller of the ground and was separated from his people, like the first blacksmith among the Mewi, who was also a tiller of the soil. The Mewi deepen the tiller of the soil so deeply that it is entirely in keeping with his way of thinking when God takes no notice of Kain and his thank-offering of the fruits of the earth, even though Kain may otherwise have been a good man and not -- as the Jahve Document reports in Gen. 4 -- the first murderer.

The Jahvist /Yahwist/ calls the descendants of Kain /Cain/ Kenites (Hb kinim /Hunters/ 24, 21, 22). We see here from passages in the Bible how low the Kenites stand in Israel's estimation. In Gen. 4, 11 the Jahvist relates that the curse of God is upon them when he describes how God curses Kain. In Gen. 15, 19 (Jahvist) the Kenites are mentioned as the first of the tribes that are to be destroyed by Israel, and in 4th kinim /Numbers/ 24, 22 /Arc see 24, 22/ (Jahvist) Bilaam /Balaam/ sings "Yet nevertheless Kain must be destroyed." Thus, everywhere hatred and wars against the Kenites, the very same feelings that the Mewi entertain against the blacksmiths, whether or not the latter practice their

/[illegible] cont./

§ [illegible] for their father's revenge. Mikmmi did not go along, but stayed at
§ [illegible] home in the land. Meanwhile the father became much richer, and
§ [illegible] since he felt that he would soon die, he called for 'L ol mmjmi as the
§ [illegible] /[illegible]/ eldest, in order to bless him. When Mikmmi heard his father's
§ [illegible] calls, he quickly cut up a gazelle and tied its parts on his chest,
shoulders, and over his chests. Thus he entered the dark hut and de-
ceived his father, as Jakob /Jacob/ had deceived Isaak /Isaac/. Then,
when the eldest brother came home and asked the dying father for his
blessing, the latter aspired, but after the farmer had learned about
Mikmmi's successful fraud from his father's lips. In accordance with
the old man's last words, Mikmmi took possession of the inheritance.
'L ol mmjmi, wronged, departed, but returned after a while with a
number of warriors, in order to fight the deceiver. The latter, how-
ever, went to him amicably and offered him gifts and friendship,
which 'L ol mmjmi accepted, whereupon the quarrel was settled.

At first glance this legend appears to be identical with the one
that is handed down to us in Gen. 25, 27 and 28, but the two versions
show a very important, though to our feelings not so striking, difference
that, from the Masai point of view, immediately explains why Jakob's
fraud is not so sharply condemned in the Bible as one would expect. In
§ [illegible] the account of the Masai, the three brothers were cattle-herding nomads,
§ [illegible] while Gen. 25, 27 describes Esau as a hunter, whereas Jakob is a cattle-
§ [illegible] breeder. I have mentioned elsewhere in this study that the Masai looks
§ [illegible] down with scornful contempt on the ol dumbo. The same feeling, we
§ [illegible] may assume, that existed among the Israelites with regard to the hunters.
§ [illegible] For it is at least very frequent among the Semitic peoples (1).

1. I found it among the Abyssinians, Somali,
Galla, Tuaga, and the Ind.

Considered from this point of view, the tendency of the Biblical
account is therefore, first of all, the cheating of the hunter by the
cattle-breeder. I found a counterpart to this in the following story
of the Masai:

"In the primeval age, when human beings still nourished them-
selves on wild plants, God announced two brothers. He showed them

/323 cont./

the herder's staff and the bow and instructed them about the use of these things. Then he commanded them to cover their eyes with their hands. When they had done this, God held aloft the herder's staff and asked which of them wanted to have the thing held aloft. One of them peered through his fingers, recognized the herder's staff, and quickly answered in the affirmative. He became a cattleherder, while the other one, who had held his hands tight over his eyes and had seen nothing, became a poor hunter (2).*

2. At a later period, when the original reason for the woes of the entire had fallen into oblivion among the Masai, this story was amplified so that the entire tse were included. God then held three things in his hands: the herder's staff, the bow, and the hammer. Upon the question of God, the one who later became the Masai chose the herder's staff; the second, who here too peered through his fingers, but was older than the first, chose the bow, so that for the last one, who had seen nothing, only the hammer remained. Both this story and the one above exist side by side among the Masai today.

/324/ I hardly believe that I shall go wrong if I assume that, in face of the one story contained in the Bible, the Israelitish fund of myths originally knew two, which, in their basic features, corresponded to those of the Masai, and one of which merely represents a reproduction of a historical episode, while the other bore the character of a religious myth. That this character was preserved in the later joining together of the two accounts is shown by the Biblical transversion, and, to be sure, most clearly by that of the Jahvist /Yahwist/ (1).

1. Gen. 32, 27 to 34 belongs to the Jahvist.

This explains why the source of the Jahve Document did not put in the foreground the description of how one brother, through deception, deprived the other one of the right of the first-born, but rather expressed, with self-admiration characteristic of the Israelites -- as well as of the Mesal -- the mental inferiority and generally lesser quality of the poor, despised brothers in relation to themselves, the well-to-do cattlebreeders, in a form that presented their own better lot as a result achieved through their superior mental quality with God's understanding. The source of the Elohim Document (E),

> 2. The presentation in Gen. 27, 1 to 45 is a fusion of the material contained in the Jahve and the Elohim documents.

on the other hand, seems not to have been familiar with the mythical meaning of the material and to have interpreted it merely as a description of an historical event. For that reason we also find here a disapproval of Jakob's /Jacob's/ way of acting in the verses 32 to 36 of the 27th chapter.

Furthermore, the similarity of the names Hanaké and Abraham is to be pointed out, the latter of which may have arisen from a similar sounding original name, as well as the corresponding characterization of the two among the two peoples they are rich in herds of livestock, intelligent, and pious. The latter is shown in the Mesal myth by the advisory position that Hanaké occupies in connection with the el ohim appointed by God. Furthermore both are distinguished by a very great age, as well as by the fact that they will marry at this age and that an heir is born to these old men. A shift exists, however, insofar as in the Bible the mother of the heir is our Sarara, who married at an advanced age, but here /Israh/, who was married already in her youth, but was barren until her 90th year.

In both traditions the circumstance that the heir was born to a father already of advanced age is not only mentioned, but expressly emphasized and motivated by a divine promise. In Gen. 17, 16ff. God promises Abraham the birth of Isaak /Isaac/, and in the Mesal

/500 cont./

its effect. Based on fetishism and despised as agriculturists, the sedentary ones are constantly plagued by raids that not only cause them great loss in human lives, but also take away any possibility for them to arrive at any improvement in their way of life by keeping livestock for the attainment of the meat and milk diet so necessary for them. Moreover, the frequent intercourse with sedentary Negroes and caravan people leads to an increase in the cases of venereal diseases. Premature marriages of girls, which can not happen among the Masai still living as nomads, is not rare among the sedentary ones and often enough leads to the death of the young woman who is scarcely more than a child and whose bony structure, despite her attained capability to conceive, is not yet developed. Finally, it must still be mentioned that no doubt the longing for the formerly free life in the broad steppes and the feeling of humiliation over having become a so deeply despised cultivator of the soil overall are factors that have a wasting effect. The latter circumstance also brings with it a decrease of national pride. The barrier that kept Negroes out of the community of the Masai has fallen. A disadvantageous race mixture hurting the people is slowly taking place. Among the Wakuafi this process was more rapid in their period. At that time no European administration prevented their raiding expeditions to Negro regions, from which they brought home livestock and women experienced in agriculture.

In frequent -- almost daily -- intercourse that now springs up and then continues to exist between the Masai who have become sedentary and the settled Negroes, the Masai naturally also fall to the disadvantages that /501/ come to the Negroes through the encounter of their lower culture with our higher one.

We have seen how many difficulties sedentarization brings to the Masai, and it is therefore not surprising that a part of those who have already become sedentary give up their fixed residences again after repeated failures. These then often join the Wandorobo, to live by hunting, and call themselves this.

123 757 medical supplies. We had frequent visitors seeking "Zaza," medicine, or a "vindana," on injection. The latter we could not provide (although we had a camp helper who stole a hypodermic syringe and for a time had a good business selling injections of water or anything else handy). We did serve as emergency hospital for various injuries, large and small. One warrior came to camp with his hand nearly cut in two. He refused to go to the hospital at Narok, so my wife somewhat reluctantly and dubiously repaired the damage. Several months later when we returned to that campsite, the same Masai came striding across the plain and proudly showed his healed hand. We was profuse in his thanks and wanted to bring us some goats and sheep as a token of his gratitude."

123 FL7 . The Masai greatly enjoy riding in a vehicle. They are willing to walk several miles just to have a ride. Whenever it did not conflict with our scientific work we made it a point to give them rides. These were often adventurous but always interesting experiences. We learned much about the Masai from them and we became well known to the many villages involved.

123 FL7 The Masai's apparent acceptance of us as essentially a part of the landscape is illustrated well by an incident in the southern Serengeti Plain. We had camped

3:Hollis G-5 (ca. 1894-1904) 1918 FL12 Masai FL12

Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as *ol-ngon, ol-ile'ngo-ngon*, etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat, or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property. A boy or man can go to his father's or paternal uncle's kraal and take or demand a goat or milk, and in all probability nothing would be said, but if it were done repeatedly the father or uncle would express dissatisfaction or refuse altogether. A man may also go to his sister's husband or wife's brother (*ol-ngwenu*) and take anything, but an account is kept and the debt has to be returned. If a man is poor it is customary for him to live with one of his brothers-in-law (*ol-ngwenu*) and help to look after the stock. He is fed by his relatives, and as payment receives one out of every pair of twin goats born.

First cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is on women's side (*ol-ngwenu*). Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always contingent on the two parties not belonging to the same sub-class.[1] The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. No warrior may submit an his

[1] The Masai are divided into five clans: *Il-Kisonko, Il-Molelyan, Il-Sulemai, Il-Matapato*, and *Il-Purkeni*. Each clan is again divided into sub-clans, e.g., the *Il-Kisonko* sub-clans include the following: *Il-ngidilai* and *Il-Purkisenti*. Women belonging to the *Il-ngidilai* sub-clan may take as wife the daughter of a man of the same sub-clan, but he may marry the daughter of the *Il-Purkisenti* or he may marry a daughter of the *Il-Molelyan, Il-Sulemai, Il-Matapato*, or *Il-Purkeni* clans. Members of the various sub-clans are usually to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same family married relations in all the sub-districts as he has in his own home sub-district.

In his many talks, *The Ethnology of the Il-Kaputei and other Masai Tribes* (Oxford University Press, 1905), Dr. Hollis states (p. 102) that the restrictions governing marriage amongst the Masai are far from simple, and he gives a number of complicated instances. As a matter of fact the rules are quite simple if we remember (1) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (2) that a man may marry a maternal relative (to a third cousin), and then only if the issues of relatives until are of the same sub-clan.

● 85 *ewuilkuart* (*e-wuje*) a girl of the same sub-class as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *al-le'letwa* and *ee-e'letwa*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-class.[1]

931 The payment of the bridal price authorises a Masai to reckon the children
583 which his wives bear as his own; it further gives him a full measure of control
837 over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised,
[931 sexual connexions or something very like it prevails between all the men of one
895] age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relatives, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his cows are lengthened. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two cows, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

935 If a man unintentionally commits incest—and it is quite conceivable that a
684 man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relatives in order to "kill the relationship" (*e-ur ang-angit*).

893 A man must abstain from having sexual intercourse with his wife as soon as
833 she becomes pregnant, and he may not again have connexion with her until the
[896 child cuts the two middle incisor teeth of its upper and lower jaws. Should this
682 rule be broken it is believed that the child will never be strong. In the event of
684 a man having intercourse with a pregnant woman, and thereby causing her to
833 abort, he must submit to a punishment which is called *al-ilakwenu*. All the women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, smearing and anointing the animals with their garments.

634 Other occasions when the sexes may not have sexual intercourse are when
276

[1] For the rules regarding hospitality see *The Masai*, p. 297. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 15 years. See *The Masai*, p. 283.

How fire is obtained.

When the Masai move and go far', the men take with them, or cut in the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Elaeodendron* sp.; the flat pieces of wood from any thorn tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

* When the journey is a short one the women carry fire with them.

2: Bernardi E, M-4 (no date) 1955 FL12 Mazai FL12

residential place of the initiates, and the *orol* which is a manhood grouping of comradeship.

The *manyatta* in the village where the initiates live is segregated from other people. Externally it does not differ from any ordinary village. Some authorities state that there is only one *manyatta* for each territorial section.[46] But Fox,[47] qualifying LEAKEY, states that this is only true for some special ceremonies as when all the initiates of one section come together to perform some special ceremonies, as, e. g., *Emuta*.

In the *manyatta* the initiates are assisted by their mothers who do the housework, and by some uninitiated girls (*na sendja ar ditie*)[48] who are there mostly for their sexual pleasure.[49] Uninitiated boys may also live in the *manyatta* for the menial works and for tending cattle.[50]

The groupings named *orol*, pl. *ioroi*, are formed, according to WARNEKROS,[51] at a meeting called by the *ingolor* when it is decided to build the *manyatta*. Membership of the *orol* is a matter of free choice. An initiate is free to join any *orol*, and he is free to change it for another soon after his first election. But if he does so when the *manyatta* has been formed, he "incurs the bitter resentment" of his *orol*-mates, and he may even be fined for that.

As far as numbers go, WARNEKROS states that "groups of 5 (initiates) will go together to join the same company" (*orol*).[52] KEMPE, however, says that the inhabitants of a single *manyatta*

[46] Hemmen, l. c., p. 68; Leakey, l. c., p. 188; Sieber, l. c., p. 6; writes that "every section has usually seven three-hundred districts, in each of which is a village, called 'manyatta'".

[47] Fox, l. c., p. 400.

[48] Hemmen, l. c., p. 68.

[49] Although the sexual life of the initiates with these girls is permissive and free, full sexual intercourse is strongly condemned.

[50] According to Hemmen, l. c., p. 118, the initiates who belong to the *emiti* trade usually do not share the village with the other initiates, but have their own villages and the girls who live with them are free females of the same trade. The *emiti* initiates organize their own raids, but because they are low their booty is always small and they are easily deprived of it by other warriors.

[51] Warnekros, l. c., p. 180.

[52] Warnekros described the *orol* as based on the *ilam*. The *Ill*, 40, p. 6, states that "*manyatta* is inhabited by the members of one particular *ilam*". It seems, however, that this is not a fixed principle, and certainly does not obtain with the Kwanga. Cf. Fosbrooke, l. c., p. 98.

/140 cont./

harmful to the child's health, on the other hand, are the poor huts, which are always /140/ filled with dense smoke, and furthermore the lack of cleanliness and the faulty diet. The belief, widespread among all African primitive peoples, that fat gives strength and health leads to the stuffing of the baby, despite all its struggles and screams, with adulterated countries of fetus. Sun, as well as stomach and intestinal affections, and sickness of the respiratory organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in imparting the blood levels, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, unintentionally aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age at which the men enter their first marriage is unfavorable for population increase. Until about the 30th or 35th year of life the blood belongs to the warrior kindling, and he only marry only after leaving it. This circumstance is rare under free live, such as exists in the warrior kinds, an understandable social institution. One must judge this arrangement on the soil in which it grew, in order to remain objective. From the same standpoint we will have to judge more leniently the free love existing among the Masai, which, despite numerous restrictions, appears to or like a Platonic institution of the women. One can do this all the more since through that permissive institution is excluded here, and consequently the possibility of infection is greatly reduced; this low circumstance is undoubtedly to be regarded as people-preserving. Actually the blood sickness due to Kenya cases (before the great Kenyan epidemics) venereal diseases only very rarely occurred. Immorality is rightly regarded as a people-destroying factor, and Lenz reckon as by many ethnologist low literature and school morality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

/Tell cont./

[1] [2] [3] [4] [5] [6] [7] [8] [9] [10] [11] [12] [13] [14] [15] [16] [17] [18] [19] [20] [21] [22] [23] [24] [25] [26] [27] [28] [29] [30] [31] [32] [33] [34] [35] [36] [37] [38] [39] [40] [41] [42] [43] [44] [45] [46] [47] [48] [49] [50] [51] [52] [53] [54] [55] [56] [57] [58] [59] [60] [61] [62] [63] [64] [65] [66] [67] [68] [69] [70] [71] [72] [73] [74] [75] [76] [77] [78] [79] [80] [81] [82] [83] [84] [85] [86] [87] [88] [89] [90] [91] [92] [93] [94] [95] [96] [97] [98] [99] [100] [101] [102] [103] [104] [105] [106] [107] [108] [109] [110] [111] [112] [113] [114] [115] [116] [117] [118] [119] [120] [121] [122] [123] [124] [125] [126] [127] [128] [129] [130] [131] [132] [133]

[illegible] community. Rather, I should call their behavior scientific-natural and mention in this connection that the Ideal, extraordinarily rich about preserving his youth, handsomeness, and physical strength, imposes upon himself wise moderation in sexual enjoyment.

An outstanding people-preserving factor is a strict organization. It can make a small people superior to a larger, less well organized one, and here has given the Ideal a position of power over the Degoon. A well organized people of the mapper nowhere on earth grows to little inside to quiet contemplation. Rather, such people are always characterized by a warlike and predatory nature. War makes itself felt here horrifully above all, since it /tell/ devours great masses of men. It has often happened that only half of those who set out returned indeed, they tell of expeditions in which all the warriors were killed. At the beginning of the situation — to cite one example, several thousand Ideal warriors set out against Unyanwati. They had assembled a few hours to the west of Ideadong /Id. Idaw/ and had as a guide an Unyanwati man by the name of Degloja, who had lived for a long time among them. During the night before the planned attack, Degloja betrayed it to his countrymen. The Ideal were repulsed with heavy losses and turned back. Far more than half of them died of hunger and thirst along the way on the twelve- to fourteen-day march. Such mass killing expeditions of war are by no means rarities; rather they occur constantly in the history of the Ideal. Certainly the great surplus of women is to be ascribed to them.

With regard to the harm that Greenwich epidemics (3)

> 1. The reason that the epidemics were so destructive around 1800 is, first of all, that two epidemics occurred in quick succession: a pulmonary epidemic and cholerpest, and, on the other hand, the removal of the lands by war expeditions was in part made difficult, in part rendered impossible, by the military nations.

[54] place until the two senior groups move out together into the elders' class. The result of this arrangement is that no group which enters the warrior class as moranglings ever stays in the warrior class for as long as any juniorder group.

[55] *Mungatos.*—During their time of service in the warrior class the members of each age-group live in special villages built away from the main married men's villages. These villages are territorial, in that all the warriors of a single age-group in a single area live in one such village. Warriors of different age-groups never live in a single mungato, so each mungato is essentially the headquarters of the members of a single age-group in the warrior class in a given area. *Mungatos* are moved about from place to place when fresh grazing is necessary.

[56] A mungato consists of a number of huts each one of which is built, and lived in, by the mother (or another married woman relative) of one of the warriors of that mungato. Normally each warrior has his own mother living in the mungato and she is accompanied by her children, especially by some of the man's established sisters and half-sisters. The elder women are there to do the work of the mungato, such as milking, fuel gathering, water drawing, etc., and in this they are assisted to a certain extent by the girls, but the latter are chiefly in the mungato as companions and lovers for the warriors. No girl can live at a mungato at all unless her brother or half-brother is a member of that mungato, and each warrior living at a mungato is expected to bring two or three of his sisters or half-sisters to live at the mungato, and if possible some of them should be fairly grown up and others quite children who will grow up at the mungato.

[57] *Sex Life.*—During the warrior stage no man may have sexual intercourse with any initiated girl or with married women, but on the other hand, there exists in the mungato a system of sex life which is decidedly interesting. The warriors, whenever they feel like it (which, as my informant pointed out, is " very, very often "), invite one of the girls (sisters of the other men in the *Mungato*) to sleep with them. This is done by a method and formula which corresponds in some ways to the [illegible] of the Kikuyu peoples, but has certain marked differences.

[58] A group of warriors at any time of the day will stand outside the village and call to any of the girls whom they see about, and when they come they say to them *nanaiku*, and the girls then each select one of the men, and say " I choose *na-ai-ni*," not mentioning the man by his own name but as " the man of *na-ai-ni*." By so doing the girl binds herself to go and sleep with the man so chosen that night. It is a point of honour and etiquette that no girl so called upon to choose a man may refuse to do so unless she is (a) actually at a menstruation period at the time, or (b) has already promised herself to another man for that night, but she may make her choice from any of those men who were in the group that called to her.

As stated above, Ol Piron means a Scottish. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Ol Piron* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has constitutive political as well as domestic importance. 56.1

Manyatta.—The *ara* is the unit for a single manyatta, except when the whole age-group of a single *ara* continue to live one manyatta for some ceremony, e.g. the *Il Cwata*. 56.1 56.1 56.2

For some years the policy of Government was directed towards suppressing the warrior system, and manyatta were prohibited, each warrior being supposed to live in his father's village. With increasing control and sedentarizing of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have manyatta provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what they were. The main political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 56.1 56.1 56.1

Nowadays the parents are somewhat unwilling that the girls should live in the manyatta, and so there are only a few of them to be seen there.

A manyatta usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey meaning would perhaps best be spelt as two words *Fumdo ipoti*. *Fumdo* is a second person singular imperative of a dative verb (see Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Ipoti* means "we" or "us". 73.6 73.6 73.6

When a man has been accepted by a girl who has been so affianced he usually holds out his hand to her with the tips of his forefinger and thumb touching to form a circle. She is then supposed to break the circle so formed with her forefinger. This is regarded as making her acceptance binding. 73.11 73.11

It is a great disgrace for a warrior to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 91.2 91.9

The Il Cwata Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups mentioned in my age-group table above. 56.1 55.1

lawn. The row of girls moves forward up to the warriors with short, swaying steps, bending their knees and swaying their upper bodies. As a rule the dance ends when each girl whose lover is absent approaches one of the dancing warriors in short high-jumps. This is an invitation to a rendezvous, which the one concerned answers in similar fashion as a sign of consent. The dance is always accompanied by singing. Shortly before sunset all return to the kraal.

201 536

Ill. 34. Dance in the warrior kraal III. $\frac{1}{A}$

Soon afterwards the livestock returns home, and, after it is milked, the people take the evening meal (en ~~ñ~~ ~~ñ~~ e ~~ñ~~ ~~ñ~~ = food in the evening), again consisting of milk. After that the dancing of warriors and girls begins anew on a small open place in the kraal, close to the entrance, and is interrupted only from time to time in order to moisten with milk the throats doubtful dry. During this time the mothers are still busy with the livestock. It takes quite a while

192 When one so often sees how the warriors flirt with the girls and
• 832 how the latter act lovingly with the former, one would expect an abundance of expressions of tenderness. But here, too, this does not turn out to be true. The only pet name that the warrior gives the girl is jorsent' ai = my darling, while the girl calls him ol ñgwe lai = my friend, or also says ñgiñ nalaí = I love you very much, to which the warrior replies: ñdai ñde ol gewarit = we shall see (literally vidibo nacta /I shall see at night/).

000 The blacksmiths. -- Their own kraals. -- Their social position. -- Attitude toward the blacksmiths. -- Workshop. -- Tools. -- Iron extraction. -- Technique. -- Blacksmiths' products: their prices. -- Wire drawing.

564 The kraals of the blacksmiths lie isolated, apart from the true
326 Masai kraals. It is not correct to designate these as a blacksmith
[361] tribe, since there are blacksmiths (ol kononi, el kononi) in all three
[614] tribes and also in all lineages, except the El kiboron, and neither a
[613] single tribe nor a single lineage consists exclusively of blacksmiths. They form a caste of their own and are the parias of the Masai, the despised and detested, the unclean, whom one would prefer not to tolerate if one did not need them so urgently. From ancient times the trade has been handed down from father to son, who only practices the calling after his marriage, therefore as ol mórun. One cannot detach oneself from the caste by not practicing the trade: rather, one who comes from a blacksmith family always remains ol kononi, no matter whether he works as a blacksmith or not. If, on the other hand -- which happens only very exceptionally -- a Masai who does not belong to the blacksmith caste permanently or temporarily practices the blacksmith's trade, he will, to be sure, also be regarded with scorn, but neither he himself nor his descendants will be despised as blacksmiths or counted in the blacksmith caste. A blacksmith kraal
[777] (eng ga el konono) in the vicinity of other kraals brings the latter bad

/PL23/

In free translation the sole says: who is the leader of the red shields: eh, it is Meleta, who was wounded in the fetlock/Gen. Powell/, so that his red blood ran into the "mulgen" (the fetlock ornament of Colobus skin): literally: who the leader of the red shields, eh, Meleta, who has taken out the blood from his mulgen.

• 852 For judging the beauty of the human body the people in general
826 apply the same principles as the Europeans does.

The Masai idea of beauty calls for a well-built, slender body with slightly rounded forms. In contrast to most other black peoples, among whom corpulence is taken as the measuring stick for feminine beauty, a Masai beauty may not be heavy. Her limbs must show just enough roundness so that they do not appear angular. Further requirements for being regarded as beautiful are oval face, white teeth, black gums, a skin color as light as possible, protruding buttocks

/[illegible] cont./

[illegible] (without, however, one's being able to speak of monogyngic, robust lips, deep umbilical cavity. The lips must not meet one, either by form or color, so that thin and dark lips are considered beautiful. The tongue and gums no artificial black coloring is regarded as beautiful; for this one uses the juice of Chemodendron tomentum (1).

[illegible]

1. (1) [illegible] [illegible] [illegible] [illegible].

Prominent muscles in the upper arm and calf or a fat belly are regarded as ugly and are contemptuously compared with the like characteristics of the Negroes, or one also speaks mockingly of club arms, or calves with a goat muscle stuck in them, or of a /[illegible]/ diseased swollen abdomen. Among girls one places value on small hands, small, narrow hands and feet, as well as even, hemispherical breasts. By means of painting with red earth one seeks to enhance the dark skin color by the contrast of colors.

[illegible] Weapons. -- Spear. -- Sword. -- Scabbard, belt, shield. -- Club. -- Bow. -- Arrow. -- Firearms.

[illegible] The foremost weapon of the Maori is the well-known, beautiful, large spear /Ill. 41 appears here/ (Fig. IV, see pp. 108 ff.). It constitutes all the pride of the warrior, who would never part with anything but that. The spear consists of three parts: the /[illegible]/ upper iron blade, the middle wooden shaft, and the lower iron shoe. At the lower end of the blade and at the upper one of the shoe, respectively, one finds a socket by means of which these parts are stuck on the wooden shaft. The earliest spears had blades 30 centimeters long and 20 centimeters wide, with short sockets, a long wooden shaft, and a short shoe. Gradually the socket of the blade was lengthened up to 40 centimeters, and the shaft was shortened in the same proportion. Such spears are still to be found only rarely today, and then the blade on them has been ground more or less narrow in the course of the years. Later, fashion lengthened the

/[illegible] cont./

[illegible] For generics they use a whole number of medicaments, to some of which they attribute only or chiefly a diuretic effect, to others a healing effect as well. The principal remedies are the following: decoction of the bark of a [illegible] (Bubalis [illegible]), often mixed with calf urine; fumigation of an aqueous (Bubalis [illegible]), of [illegible] (Acacia [illegible]), [illegible] (Bubalis [illegible]), of [illegible] (Bubalis [illegible]) and of [illegible]. (To a new decoction of the latter is also used, as well as of [illegible] (Cissus [illegible]) [illegible], of [illegible] (Cissus [illegible]) [illegible], of [illegible], and, finally, decoction of the dried root bark of a [illegible] (Salvadora [illegible]) and of the wood of a thus species (of [illegible]), which is regarded especially as a diuretic.

[illegible] /[illegible]/ For [illegible] one drinks a weak decoction of the root of a [illegible] (Salvadora [illegible]).

• [illegible] A hot decoction of of [illegible] (Cissus [illegible]) is regarded as an aphrodisiac for men, one made out of of [illegible] (Albizzia [illegible]) for women. The bark of the roots of [illegible] (Acacia [illegible]) and of [illegible], used as seasoning for meat foods, is supposed to have the opposite effect among the women.

[illegible] These last two remedies, however, are by no means regarded as aphrodisiac, but, on the contrary, as diuretics. The people explain the effect ascribed to them here with the words: the women does not like the odor of the girl, by which probably a specific [illegible] /kind of odor/ more or less clinging to the clothing of all women is to be understood.

[illegible]

[illegible] With hoeing (only as of [illegible]) a blower is pilfered on each of the temples and on the nape with the fire [illegible] (of [illegible]) rubbed [illegible] more rarely one ties a cord rather tightly around the forehead and the occiput. The latter remedy is not peculiar to the blacks, but has been adopted in places from other peoples.

[illegible] For [illegible] (only on [illegible]) one pours warm [illegible] the [illegible].

701 [701] ceremony whatsoever. The powder she serves as love magic, in that the woman sprinkles herself and the man with it, through which he falls for her in helplessness. If a woman loses her first child soon after birth, she hangs in the doorway of her hut during her next pregnancy an amulet that consists of a few cowrie shells sewed on a small piece of leather and a little bag, made by the *ol gotorbi*, containing medicine to protect the expected child from sickness and death. The plants preferred by the *ol gotorbi* for the manufacture of his magic medicine are *ne gobowiri* (Commelina benthami G. Sch.), *ol tiage* (Crotalaria ringensis), *ne gorsee* (Cynthula benthami Oliv), *ol emenki* (Cierio mendicus), *ne ngi* (Cordia monoica), *ol dobbe* (Acacia mellifera Benth), *ne gobowiri* (Ficus sycomorus Oliv).

704 The belief in the evil eye, which makes human beings and livestock sick, is also generally widespread. One afflicted with the evil eye (*ene gwaki*) may not let himself be seen in the vicinity of the kraals. He is universally avoided by all people and therefore builds a hut of his own, in which he lives alone with his family. If he ventures to enter a strange kraal, he must be prepared to be killed. If a human being or a head of livestock suddenly falls sick or dies without one's being able to explain this by natural causes, it is often believed that the reason for it must be sought in the doings of an evil sorcerer (*ol emiyenot*). Only if such a one has not been in the vicinity for a long time is the misfortune traced back to a punishment from God.

/[illegible] root./

[224] [501] 500. ol [illegible], a liana not infrequent in the river forests. The root bark, smelling strongly like vanilla, is valued, squeezed, and worn by men and women as a necklace. It also finds use as a secret medicine of the ol [illegible] and the ol [illegible].

[512] 501. ol [illegible] (Allanblackia [illegible] Engl.). One or two hand-sized pieces of trunk bark or root bark are pounded with a club into fibers and held for a few minutes in boiling water bath for cooking. This soup is used by warriors as a nerve stimulant, by women as an aphrodisiac. To cure gonorrhea, one adds a small amount of honey to the broth before drinking it. An extract that is made with double or /[illegible]/ triple the amount of bark is used to get rid of tsetse and ascaris, or also as an emetic for bilious fever. The fresh bark bast is chewed for constipation.

[512] 502. ol [illegible] (Solanum nigrum L.). Children eat the berrylike fruits.

503. ol [illegible] (Ocimum [illegible] Willd.). A root decoction is used as an emetic.

504. ol [illegible] or ol [illegible] (Acrocaulus [illegible]). The straw poison is obtained from the roots and wood by boiling.

505. ol [illegible] I or [illegible].

506. [illegible] (Maerua [illegible] Oliv.). From the powdered root the ol [illegible] makes an amulet that is supposed to protect one against colds and fever.

[511] 507. ol [illegible] [illegible] (Cassiluma spec.). The soft, flaky twigs are eaten by warriors on the march, by boys tending cattle, to quench thirst.

508. ol [illegible] I ol [illegible] (Euphorbia spec.). Hyenas allegedly eat this plant.

509. ol [illegible] I ol [illegible].

510. ol [illegible] (Acacia [illegible] Harb.). Fodder for small livestock.

511. ol [illegible] (1)

1. Also called ol [illegible].

(Acalypha indica L.). Good fodder for small livestock.

This. Tissue of the soft parts firm. Skin color forehead, cheek, patch of hand gray-reddish-brown (between [illegible] and [illegible]), chest somewhat darker ([illegible]). /[illegible]/ back of hand black-reddish-brown ([illegible]), nipples somewhat lighter (between [illegible] and [illegible]). Color of the iris black-brown. Palpebral fissure set obliquely, slit wide. Head hair 1 1/2 cm. long and very soft. Head, from the crown view, rounded, egg-shaped with broad front end, strongly projecting at the occiput. Transverse profile of the occiput symmetrically rounded. Crown arched roof-shaped, lying toward the back. Glabrpat high, occiput rose strongly arched out. Face broad-oval. Profile orthognathous. Chin somewhat projecting. Hair edging of the forehead angular-rounded. Forehead medium high, steep, distinct frontal protuberances. Nose small, low, broad. Root of nose moderately deepened toward forehead, bridge almost straight, tip blunt and directed straight out, nostrils rounded, alae slightly pulled out. Lips moderately thick. The middle lower

ceremonial place of the initiates, and the *ure* which is a monthly grouping of somebodiy.

The *mangatu* is the village where the initiates live in segregation from other people. Externally it does not differ from any ordinary village. Some authorities state that there is only one *mangatu* for each territorial section.[illegible] But Fox,[illegible] qualifying Lawry, states that this is only true for some special occasions as when all the initiates of one section come together to perform some special ceremonies, as, e. g., *Tuaia*.

In the *mangatu* the initiates are assisted by their mothers who do the housework, and by some uninitiated girls (*ure-mujo* or *dido*)[illegible] who are there mostly for their sexual pleasure.[illegible] Uninitiated boys may also live in the *mangatu* for the menial works and for tending cattle.[illegible]

The groupings named *ure*, pl. *ures*, are formed, according to Wardsworth,[illegible] at a meeting called by the *tagabe* when it is decided to build the *mangatu*. Membership of the *ure* is a matter of free choice. An initiate is free to join any *ure*, and he is free to change it for another even after his first election. But if he does so when the *mangatu* has been formed, he "loses the bitter resentment" of his *ure*-mates, and he may even be fined for that.

As far as numbers go, Wardsworth states that "groups of 1 (initiates) will go together to join the same company" (*ure*).[illegible] Wonson, however, says that the inhabitants of a single *mangatu*

[illegible] Stevens, l. c., p. 65. Lawry, l. c., p. 188. Gibson, l. c., p. 61 notes that "every section has usually some three favourite districts, to each of which is a village, called 'mangatu'".

[illegible] Fox, l. c., p. 401.

[illegible] Wonson, l. c., p. 66.

[illegible] Although the sexual life of the initiates with these girls is promiscuous and free, full sexual intercourse is strongly condemned.

[illegible] According to Wardsworth, l. c., p. 119, the initiates who belong to the *waitiki* *tuaia* usually do not share the village with the other initiates, but have their own village and the girls who live with them are from families of the same *tuaia*. The *waitiki* initiates organize their own *tuaia*, but because they are free their booty is always small and they are easily deprived of it by other *tuaias*.

[illegible] Wardsworth, l. c., p. 180.

[illegible] Wardsworth described the *ure* as based on the *ulua*. The *Ms*, ch. p. 6, states that "*mangatu* is inhabited by the *ures* of one particular *ulua*". It seems, however, that this is not a fixed principle, and certainly does not obtain with the *Kauaga*. Cf. Fornander, l. c., p. 24.

time. Then the dance is resumed until night. At this stage the initiate is allowed to have intercourse with his wife. [96]

The next morning the initiate, as soon as he rises, again drinks some milk. Then he is smeared all over with a special mixture by two of the elders, who also present him with an olive and a bamboo stick. A procession is then formed from inside the hut, where these ceremonies have been accomplished, to the cattle kraal. Here the elders shower four or eight " (it must be four or eight) " head of the initiate's cattle, and he hits each one of them with his olive stick.

The initiate must now remain inside for five days. On the fourth day his mother pours liquid, half milk and half water, on his head, and then the mother shows him.[**] The ceremony is now complete.

Fosbrooke,[**] makes reference to a similar ceremony " by which a novice is permitted to drink the milk from his wife's cattle ".[**] He then remarks that " this does not, however, permit him (the initiate) to drink milk by himself; this must always be done with his age-mates until such time as all go through the spitter ceremony ". This indicates that " that spitter of milk " must also be considered as an individual anticipation of the status officially recognized only at the corporate ceremony.

We do not possess any detailed description of " the spitter of meat ". We are informed by Fox,[**] that the ceremony takes place, and he records it as " the second el-spitter ceremony, called the Ol-spitter of meat ". After such ceremony the initiate may eat meat freely, and, if he chooses, eat meat which has been touched by a woman. [97]

The spitter proper is the closing ceremony which finally initiates the age class. It is celebrated by the Kisongo, but acknowledged and accepted throughout Masailand.[**] The ceremony is briefly described by Hanson,[**] as follows: " when all the members [98]

[**] These formalities may be performed either by the candidates' mother or his first wife, provided the latter had not remarried while he was still uninitiated, or by the two women together.

[**] Fosbrooke, l. c., p. 36.

[**] The expression " his wife's cattle " sounds inconsistent and indefinite. Probably it refers to the initiate's cattle tended by his wife.

[**] Fox, l. c., pp. 400 s.

[**] Fosbrooke, l. c., p. 36, states that the ceremony " is traditionally held at sidenga for 7 morsak (the hill of the Elders), Upper Sangwe, Mwiki District.

[**] Hanson, l. c., p. 78.

[illegible] consanguineal (*a-mapi*) girl of the same sub-class as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are of his father and *a-e'ahine*, and no brother may cohabit with the wife of a member of his *ngapi-grade* if that man is married to one of his own relatives, or to a daughter of his sub-class.[1]

[illegible] The payment of the bridal price enforces a Maori to review the children which his wives bear as his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though polyandrous marriage is recognized, sexual promiscuity is something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of propinquity and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own class or with a near relative. In other words the Maori may be said to live in a state of group marriage, based on the organization of the whole community in age-grades, and restricted by the exogamy of the sub-class and the rules regarding incest.

[illegible] If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-class, he is punished by his relatives, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His head is destroyed, he is severely beaten, and a number of his cows are slaughtered. If a married or boy commits adultery with a wife of a man belonging to his father's age-grade, he is admonished by the members of that age-grade. Unless he pays the widow two cows, one for them to eat and the other to enable them to buy heavy wine, and pays them to observe the cows, it is supposed he will die.

[illegible] If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relatives in order to "kill the relationship" (*a-ere ngapi*).

[illegible] A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *a-kakowaka*. All the women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, scraping and softening the animals with their garments.

Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Maori*, p. [illegible]. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 7½ years. See *The Maori*, p. [illegible].

Before dealing with the subsequent procedure, when a girl has promised to visit a warrior on a given night, it is necessary to outline the sleeping arrangements and accommodation in a manyatta hut. The hut is not divided off into rooms in any way, and at one end of the hut is the bed upon which the women (mother of one of the warriors) to whom the hut belongs, sleeps with her younger children. At the other end of the hut, not screened off in any way, is the bed upon which the warriors and girls sleep. No warrior may ever sleep upon the married woman's bed, but the woman's husband can come down and visit her whenever he likes, and when he does so, no warriors or girls may sleep in the hut. Ordinarily, however, the woman's husband does not live at the manyatta, and she and her small children sleep on her bed at the one end of the hut, while the warriors sleep on the bed at the other end of the hut with the girls. No warrior ever sleeps in his own mother's hut, but always in one of the other huts if he has invited a girl to sleep the night with him. When, therefore, he has arranged for a girl to visit him at night he goes in the evening to one of the other huts and arranges to sleep on the young people's bed there. He then sends a message by the woman who owns the hut to tell the girl that he is sleeping there so that she may come to him. There is absolutely no objection to several men coming in this way to the same hut, and sleeping on the same big bed each accompanied by his girl. In fact, it is considered wrong for a warrior and a girl to have sexual intercourse unless there are also other couples sleeping on the same bed. Moreover, besides these men who have come to the hut and sent for their girls to join them there, there are usually several younger girls, daughters of the woman who owns the hut, sleeping on the bed too. These young girls, too young as yet to sleep with the men usually, nevertheless, sleep on the same bed as the warriors and older girls, and thus grow up steeped in the customs of the manyatta.

It is exceptionally difficult for a European to understand all the full details and facts concerning native sex life, but the following facts have been noted and verified for the Masai. The girl may sleep with a man except she be absolutely nude, but on the other hand, although by tradition and by etiquette she may not refuse an invitation to sleep with a man (except for the two reasons already given above), she is not necessarily expected to allow him full sexual intercourse, and, in fact, often does not do so. Thus—strange as it may seem—Masai girls do sometimes go to their husbands as virgins in the physical sense of the word (see Marriage), although they may have slept with men in the manyatta sometime before. Usually, however, Masai girls have no objection to full intercourse except during the first four or five days after each menstrual period (see Girlhood), for the Masai firmly believe that conception cannot ever result unless intercourse takes place very soon after menstruation, and four to five days is considered an absolutely safe margin. Moreover, this belief seems to have a strong foundation in fact, and it thus raises a very interesting point for physiologists as to whether this is as true of primitive peoples as it

D. Sexual Fan.—*Further Data on the Masai of Kenya Colony.*

Marriage.—The warriors may not marry till after the *B.Uanta*, and do not usually do so till after their first *B.Ryiaka*. The case stated by Mr. Leakey[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice.

The cattle required for the bride-price are payable on the birth of the first child, and cannot be redeemed if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where from a mess of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to remove it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the contraceptive (see p. 202) are observed. It is said that if a woman is positively unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle.

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation feel that a man of another has had intercourse with one of their women.

If a woman who has borne children leaves her husband and lives apart from him, he under 40 his eldest son is old enough, and then sends him to fetch her back.

A man may not have sexual intercourse with the wife of his full brother (another's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister.

A husband and wife may not call each other by their names.

Father-in-law
Mother-in-law
Son-in-law
Daughter-in-law
} Must not be addressed by name.

Family.—The name for a family is *Ol Mawi*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Wanini* sinati, he is proud of the fact.

Death and Burial.—Dead bodies are disposed of by the lyaman, except for those of *Laibons* or very influential old men. These are buried under mounds of stones.

[1] See p. 296 of this volume.

the father's home or to his own example. But it seems that a ceremony is performed which releases the husband from the prohibition on women having sexual relations with married women.

A widow is looked after by her husband's brother, or by one of her own brothers. She may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his.

Polygamy

A man may have as many wives as he can pay for: one of Stella's men says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and even six (most much less often, and more than five very seldom). Each wife has her own hut in the husband's kraal, and, as she has wives on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children.

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and clearly. Any of a man's age-mates (members of his own grade) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A married woman is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uncircumcised boy.

Divorce

A wife cannot be divorced even she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father.

Adoption

In the old days, children captured in war were often adopted, and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in cases of famine. Such children become accepted as Masai. Under the term "adoption" it also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a woman will may adopt a child of one of her co-wives.

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, and attendant. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor not in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Stella says all the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl.

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother

J: Bernardi E, 36-4 (no date) 1955 FL12 Maori FL12

[illegible] "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly".* Apparently no special ordeal such as we find among the Kiyaga is attached to this testing.

b) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (Fox). Generally it takes place early in the morning. The operator is said never to be a Maori. Generally he is a Dowie, and sometimes a Kikuya (Fox). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other healers or officers out of the pure Maori.*

[illegible] Before the operation is performed, the candidates take a cold bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (Beaver).* Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *ong ulpate*, after which he is allowed to speak.

[illegible] The circumcised youth is presented by his mother's brother with new outfits, and henceforth he is not supposed to make use of any garment worn before the ceremony. A procession by four girls (cfr. Fox), wearing branches takes place to the entrance of the boy's hut. The elders are again entertained with meat and beer,

[illegible] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not as precise, to say: the house of the candidate's father.

* We may assume that these questions are concerned with the candidate's moral and sexual behaviour. Fonsecca states that "prior to circumcision no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Pandi-speaking peoples.

* Cfr. the slaughter of the Ol Ol spoke on the *Endolomi*, of the of *ewai* boys, the *ciperoni*, and the *enjoyone* at the *Endongoro-Enghoto*, of the of *ewaai* at the *ewate*.

[illegible] * Lacey states that it is "absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony". No further details are given nor are reasons offered for this fact which is not mentioned by any of our Maasai authorities. However, it shows that circumcision is not related to the cattle aspect of Maasai culture.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood ". He also states that *Unoto* " is probably the best known and most misconstrued ceremony in the Masai age-grade system ". 884 561

Unoto is not performed at a single place for whole Masailand, but in every territorial section or group of sections. [90] It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull. [634]

a) The first stage takes place in a special hut called *singira*. [91] Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY, [92] another test is performed insidie the hut aiming at detecting those who have entered surreptitiously. [346] [834] [754]

In the annual report of the *NAD*, [93] we read that every candidate is expected to give " an account " of his past life. " The importance of the *E-Unoto* " states the same report, " lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe ". " The *O-Singira* " says FOX, [94] " gives the warriors permission to have sexual relations with initiated women ". [783]

b) The nomination of the ceremonial leader (*ol aunoni*, pl. *il aunok*, or *ol otuno*) takes place inside the *singira* hut. The elders 56 624

[90] LEAKEY's statement, p. 194, that at the *Unoto* " all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present " is emphatically denied by FOX, p. 451, and FOSBROOKE, p. 29. According to FOX the following sections perform it: (a) Purko; (b) Loita and Siria; (c) Damat; (d) Kuputiei, Lodokilani and Matapatu; (e) Laitokitok; (f) Kisongo. And FOSBROOKE says that the *Unoto* is celebrated " by sections or groups of sections " and is attended by as many warriors as possibile, " but by no means all ". SANDFORD, on HEMSTED's authority, recorded that the *Unoto* was held by the Purko, Kakonyuke, Dalalekutuk and Damat on the Kinangop. The Sigirari, Matapatu, Kaputiei and other divisions where it suited them best. [114] [184] [634]

[91] There are contradictory descriptions of the *singira*. MERKER states that it is a 'very big hut'; BAGGE says " not so big "; HOLLIS " small ". Leakey and Fox state respectively " an enormous ", and a " very large " hut. Probably it all depends on the actual number of the initiates involved.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

83 sweetheart (*e-sanja*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'sōtwa* and *en-e-'sōtwa*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 583 837 The payment of the bridal price authorises a Masai to reckon the children which his wives bear as his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised, [834 835] sexual communism or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his oxen are laughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 684 If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*a-ar eng-anyit*).

843 833 [856] A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of 682 684 a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *ol-kishuroto*. All the women of the neighbourhood collect together and, having stripped, seize the guilty 833 person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 278 Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Masai*, p. 287. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 7½ years. See *The Masai*, p. 262.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

poison is being made and when honey wine is being brewed. During the time that a man is making poison (eight days) he is treated almost as an outcast. He must leave his house at 4 a.m. and not return till 7 p.m., when he must rub clay on his body. He may not eat when the sun is above the horizon; he may only relieve nature far away from the kraal; and he must sleep alone. If he were to break any of these rules it is believed that the poison would be useless. When honey wine is to be brewed a man and a woman are selected for the purpose, neither of whom has had sexual intercourse for two days. A hut is set apart for them to live in until the honey wine is ready for drinking (six days), during which time they may not sleep together. As soon as the honey wine is ready they receive payment, and go to their respective homes. Were they to have sexual intercourse during the six days that the honey wine is brewing, it is believed that the wine would be undrinkable, and the bees that made the honey would fly away. 834 278 834 273

Mothers-in-law and their sons-in-law (*eng-apatani*) must avoid one another as much as possible, and if a son-in-law enters his mother-in-law's hut she must retire into the inner compartment and sit on the bed, whilst he remains in the outer compartment; they may then talk. Own brothers-in-law and sisters-in-law (*o-sindani le-anyit* and *e-sindani e-anyit*) must also avoid one another, though this rule does not apply to half-brothers-in-law and sisters-in-law (*o-sindani* and *e-sindani*). This rule is possibly due to the fact that when a man dies his own brother may not marry his widow, though there is no objection to his half-brother (paternal) or one of his paternal cousins taking her to wife. In fact, the only person who may marry a widow is one of the deceased husband's half-brothers or paternal cousins. It frequently happens, however, that widows never re-marry, but live with their children in the kraal of the eldest living brother of their late husband, who becomes the guardian of their children. 606 607 606 607 587 [591]

Divorce is almost unknown amongst the Masai, and it is only barren women who may be divorced. But if a woman is barren it is usual for her husband to give her some of his children by another wife to bring up. Daughters are usually selected; but if there are several sons the youngest and the youngest but two may be given to the stepmother. When a barren woman is a bad woman and is disliked by her husband and his other wives, she may be divorced, in which case her father or his heirs must refund the cattle paid for her, and she is at liberty to re-marry. 586

particular relation. The naming ceremony is as follows:—When the child can run about a *small* ram is chosen and killed by the women of the village and eaten by them (and not by any men). The child is then given a name which is chosen by the assembled women. It is usually named after some friend of the family either living or deceased, and great care is taken that the person after whom the child is named is (or was) good-looking and of good character, as otherwise the child would grow up ugly and of an evil nature. This is the name used by the family and by friends, but after initiation a boy is always called "Son of 'so-and-so,'" and not by his own name (except by his family). After a man is married and has named sons of his own he is called "Father of 'so-and-so.'" 553 551

Tooth Extraction.—As soon as a child of either sex has cut all its milk-teeth the two central lower incisors are knocked out, and this operation is repeated when the permanent teeth grow. There is no ceremony attached to this removal of the teeth, which is performed with a small, sharp two-edged knife. The reason given for this practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, water and gruel can be poured in through the hole so formed. 304 [852] [412] [758]

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced in the cartilage round the upper part of the ear, and as soon as the boys start herding cattle and the girls start drawing water they have the lobes of the ears pierced. Ears are pierced in order to prepare them for carrying ornaments, and the holes are stretched to the size which the individual requires by means of a gradual increase in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their early days, but I could not obtain any details from my informants. 524

Clothing.—From a very early age children are given small bits of skin as clothing, and the boys have small sandals made for them. 291

Food.—The food of children is the same as that of grown-ups and is restricted to milk, fat, and meat, as no crops are grown. 262

PART II.—BOYHOOD.

Herding.—As soon as they are considered old enough (and this depends upon the number of other boys in the family available for this work), boys are sent to help herd the sheep and cattle, and they continue to do so until they are old enough to start preparing for initiation. 857

Sex Life.—Initiation is often delayed until some little time after puberty, and it is not considered in any way wrong for these boys to begin indulging sexually as soon as they like, provided that they observe certain restrictions. They may do as they like with the younger girls in the neighbouring villages, provided, of course, that they observe the law forbidding sexual relations with any member of their own sub-clan, 836 883 684 [834]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

836 and also provided they avoid such young girls as are attached to men in the warrior
883 classes. That these young uninitiated lads even try to have intercourse with married
684 women is certain, as there is a special penalty provided for women who so debase
[834] themselves. (*See* Marriage.)

881 *Preparation for Initiation.*—No boy is allowed to think about preparing for
561 initiation until he can show a growth of facial hair indicating puberty. Boys are always very anxious to be initiated as soon as possible, and as soon as they consider that they can make a reasonable claim that they are old enough, they form themselves into groups of anything from six to a dozen, dress themselves in new calf-skins, and, taking with them bows and arrows, go out on a tour of all the villages of the district announcing that they are candidates for initiation and demanding presents. These groups are called *olamal*, and by long custom they must be given anything they ask for which is within reason.

Custom dictates that they shall ask especially for honey and hyrax-skin karosses,
[431] and these they take and present to senior and influential elders belonging to various circumcision groups, at the same time requesting them to bring up the question of their initiation at the councils, and to make all the necessary arrangements. There is often a delay of anything from six months to a year before the consent of the councils is obtained and arrangements are set on foot. In the meantime the groups of boys continue on their visiting tours collecting more presents as further persuasion to the elders to do as requested, and fresh groups of boys are formed and add themselves to the number of the candidates for initiation.

During the whole time that these *olamal* groups are wandering about from village
[836] to village they may sleep with any of the uninitiated girls in the villages which they visit (even those who are attached to young warriors), provided that they observe the normal restrictions of the warrior classes.

Ceremony of Seizing the Ox by the Horns.—When at length the elders have consented to proceed with the initiation ceremonies, those elders to whom the presents of honey and hyrax-skins were given make the necessary arrangements for the ceremony of seizing the horns of the black ox. These elders select a village of some elder of the
[614] Lukumai sub-clan (the ox must always be supplied by a member of this sub-clan), and demand a black ox without any defect and without any trace of other colour on any part of its body. Should the owner of the selected village not possess such an ox he must obtain one from another member of the Lukumai sub-clan, and if he cannot do so he must obtain it from another clan by purchase or exchange, and present it to the elders. This ox is called *oregeteng*.

When the ox has been procured, a special village is built near where the ox was obtained, and a day is fixed for the horn-seizing ceremony. Only those of the candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

881 As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circum-
[302] cision. He is then fetched back to the village and has his hair shaved off by his
[292] mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the yard until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the yard and kept there during the ceremony, for it is
[231] absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new
[304] ram-skin dress and sandals, and the operator performs the operation with a special
[413] small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and
[262] on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

881 *The Novitiate.*—The period of novicehood varies in length of time, as a boy
561 must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses
[884] between the time of the bull-seizing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole
[834] novitiate period the novices must not cut their hair at all, nor may they indulge in
[302] any form of sexual intercourse, nor may they use red ochre, but only plain fat on
[223] their bodies. They are required to shoot as many birds as they can, and to
[301] skin them and stuff them roughly with grass, and tie them to their hair as a decoration. More and more skins are added to this head-dress as the weeks go
[237] by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

When the time for the ceremony arrives, a very big village is built called *sunubu*, and all the members of that age-grade which is to be transferred from the Junior to the Senior Warriorhood stage assemble here with their friends and relations. The warriors concerned all dress up in their very best finery, and lion skins especially are in great demand; and for nine days they dance a special dance called *Kaibach el moran*. During the whole nine days of dancing a very great number of cattle are slaughtered, and there is great feasting and beer-drinking, but neither the dancing nor the feasting are the important part of the ceremony; they are merely incidentals, centred around the *thingira*. 561 [535] [574]

The Thingira.—Away from the main village an enormous hut has been built which will accommodate anything up to four hundred men at a time. It is said to be round in plan, to have a pointed roof, and to take very many days to build. There are no partitions inside it, but in the centre is dug a circular pit. Outside the hut is a thorn fence with only one entrance. This hut is called *thingira* (a word which has been borrowed by the neighbouring Kikuyu and applied to ordinary bachelor huts), and is the centre of the whole of the *Eunutu* ceremony. During the whole of the nine days of the ceremony this *thingira* is used as a "club-house" by the men of the age-group concerned with the ceremony, but there are certain restrictions, and it is these restrictions which give the key to the meaning of the whole ceremony. It is considered both ignoble and dishonourable for any man in the warrior groups—and more especially the junior warrior groups—to have any sexual relations with any but the uninitiated girls, but, of course, cases do occur either openly (*see* Forced Marriage) or in private. Now all members of the age-group concerned must be present at the *Eunutu* ceremony, but only those who have strictly observed the above regulation and have never had sexual relations with an initiated girl or married woman may enter the *thingira*. In order that no one may do so under false pretences the entrance to the *thingira* is bewitched by the elders, so that if anyone ineligible enters he will surely die. 561 34 [192] [834] [754]

The *thingira* is not big enough for all the warriors concerned to use it simultaneously, and each day for the nine days there is a public ceremony when the various individual territorial groups are expected to enter. For this ceremony all the friends and relations of those who are expected to enter collect round the entrance and each individual as he enters is greeted with applause, as he has shown by entering that he has not dishonoured himself or his family. Those warriors who dare not enter try to slink away unobserved, for they are disgraced. Inside the hut—as mentioned—is a large hole which is used as a cesspool, into which the men who enter the hut must urinate. This cesspool is also bewitched as an extra precaution, and anyone who has falsely entered and evaded the witchcraft of the entrance will certainly die upon urinating in the hole. All those who enter the *thingira* on any given day during the ceremony sleep there that night, and also have milk and meat brought them for food, and sit and talk for hours. During [514] [754]

883 attached to the warriors to sleep with them. In fact, we may say that for the girls
836 sex life starts before puberty and continues (with no such period of sexual prohibition as the boys have during the novice stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that
[834] sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

841 *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refuse all invitations to sleep with men or boys. There is no restriction of work during the menstrual
[171] period as there is among some Bantu tribes, but a girl or woman must wash her hands before milking if she is menstruating.

842 *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special teaching about this, girls grow up with this knowledge and take care not to allow full intercourse during the few days immediately following menstruation. Occasionally, of course, a girl does allow sexual intercourse at this time, either because she is carried away by sexual desire, or because she deliberately wishes to conceive for some reason or another (*see* Warriorhood). In the former case she will try to bring about abortion.

847 *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she sends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortificant. This is the only method used.

848 *Penalty for Conception.*—If an uninitiated girl conceives and her condition
582 becomes known she must immediately be initiated. In the normal way (*see* below)
884 her initiation would take place at her mother's house and the necessary arrangements would be made by her father, but if she is to be initiated because she is with child the onus of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. Not only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one heifer and a quantity of beer to the girl's father, "because he has prevented the father

11; Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

from having the honour of the feast of her initiation." Should the man decide to marry the girl, this heifer is counted as one of those which must be handed over for the marriage transaction (*see* Marriage). 848 582 884

Girls' Initiation.—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the warriors or boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a *manyatta* with one of her sons, then the girl's initiation will take place at the *manyatta*, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place when the day of the ceremony has been fixed and beer is prepared. A ram called *olekelnjatha* is slaughtered either before the actual operation or just after it. This is the "ram for childbearing," and is supposed to insure fertility. [825] This ram is eaten by all those present at the ceremony. The actual operation is performed by an old woman, who is a skilled operator (she may be either a Masai or a Dorobo), and the girl sits on a skin inside the hut during the operation. [304] The operation is said to be the same as that used by the Kikuyu on their girls, and this is a form of clitoridectomy, but exact details cannot be obtained from the men. [171] As soon as the operation is over the operator washes the girl to "cleanse her of the blood spilt" and a ram is then slaughtered and given to the operator. This ram is called *oletuguet*. Next a ram is killed called *olkelelartat* to provide meat and fat for the girl during convalescence. 884 582

Shaving Ceremony.—Finally after the girl is healed and before she can go to her husband's village, a ram is killed called *olbarnet*, which is the "ram for the shaving," and at the same time the girl's head is shaved by her mother. [302]

PART V.—MARRIAGE.

Exogamy.—Marriage is always exogamous as far as sub-clans are concerned, but marriage within the main clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No one, whether as a boy, warrior, or a married may, may at any time ever have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (*see* below). 582 614 834

A woman remains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband. 614 585 851

Betrothal.—Amongst the Masai there are two usual methods of betrothal:— 584

(1) Betrothal of unborn children.

(2) Betrothal of infant girls.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

585 837 *Married Sex Life.*—Among the Masai (as already stated) a married woman's first duty to her husband is to bear him children, and husbands do not mind if their wives have intercourse with other men, provided that they do not do so actually at a time when their husbands want them themselves. Even in such a case—apart [684] from private measures which a husband might take—there is no recognized punishment for the woman, or any legal claim against the man, provided, of course, he is a married man of a sub-clan other than the woman's own.

834 *Sex Restrictions.*—There are, of course, certain definite regulations which must be observed, the chief of which are :—

(1) No woman may have intercourse while she is with child (not even with her husband).
(2) No woman may have intercourse during the actual period of menstruation.
(3) No married woman may have intercourse with an uninitiated boy.
(4) No man in the warrior class may have intercourse with a married woman.
(5) No married man may have intercourse with an uninitiated girl.
(6) No woman may have intercourse with a man who is the son of any member of her husband's own age-group ("They are as his own sons, whatever their clan may be").
(7) As already mentioned, the rule of sub-clan exogamy applies as much to general sex life as it does to marriage and, therefore, a woman must avoid all men of her own sub-clan.

684 PENALTIES FOR BREACHES OF THE ABOVE RESTRICTIONS.

Breach of No. 1.—There is no fixed punishment for a breach of this regulation, but the man would be accused of causing damage to the child, and should abortion take place later, or the child be born with any deformity, he would be held responsible.

Breach of No. 2.—There is no punishment for a breach of this regulation, but it is simply "Not done."

Breach of No. 3.—A woman who is found infringing this rule is severely punished in the following way. She is tied up and severely beaten by her husband, so that her whole skin is bruised, and then sheeps' urine is poured over the abrasions. This acid causes very severe pain for many hours. The boy is not punished, as the fault is held to be entirely that of the woman, who should know better. In actual [431] practice the boy is expected to bring the husband a present of honey beer in order [754] to placate him, and so avoid being cursed with a very potent curse.

Breach of No. 4.—There is no punishment for the woman who is found to have broken this rule, nor is there actual punishment for the man, save that if his sin is discovered he is dishonoured at once by his fellow age-group members, and even if not found out at once, his dishonourable conduct will be found out at the *Eunutu* ceremony (*see* p. 194), when his turn comes to enter the *thingira*.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

593 431 601 *Gifts to Certain Relations.*—A somewhat similar custom is that which ordains that a grown-up son must give certain presents to all children born to his father, as follows:—

(1) To a young girl-child, either a heifer or else a young ewe or young she-goat which has not yet had young. If the former present is given the child in future calls its brother (or half-brother) *baashi*, and if either of the two latter animals is given the appropriate name is *bakuu*.

(2) To a boy-child, either a heifer or a young ram or else a young ewe or she-goat which has not yet had young. The following are the appropriate names by which the boy henceforward calls the man: *Ithubin* if the gift was a young ewe, *ingini* if the gift was a young she-goat, *ndauu* if the gift was a heifer, *ithithume* if the gift was a young ram.

A grown-up son must also give a present to any new wife married by his father, the animal given and the name thenceforward used by the woman to the man being exactly as in the case of girl-children above.

604 *Mother's Brother.*—Among the Masai I can find no trace of any special functions of the mother's brother, and he has no special position in relation to his sister or her children.

589 *Widowhood.*—There is no idea of uncleanness attaching to widowhood, and therefore there is no ceremonial purification ceremony before sexual life can be indulged in by a widow. When a woman is left a widow she builds herself a hut [607] with one of her husband's own brothers (*i.e.* brothers by the same mother), and he becomes responsible for her welfare and acts *in loco parentis* to her children as far as making arrangements for initiation and marriage, etc., are concerned. In [835] no circumstances, however, may this brother or any other of her husband's own brothers have sexual intercourse with the woman. If she is still of child-bearing [851] age she is expected to go on having children (who will rank as her late husband's), and to this end she may have sexual relations with:—

589 834

(1) Any men of her late husband's age-group, who are not excluded by other restrictions (*see* above).

(2) Any of her late husband's half-brothers (*i.e.* brothers by a different mother).

(3) Any other men not otherwise excluded.

757 *Sickness.*—My informant was unwilling or unable to give me any detailed information about the treatment of sick people, save that medicines were made from the barks and seeds of various trees and from the stomach juices of slaughtered animals.

PART VII.—DEATH AND BURIAL.

76 *Death.*—Death is looked upon with fear and, therefore—except in the case of very old men and women past child-bearing—every precaution is taken to avoid a

[Warrior Kraal]

/84 cont./

836 701 Every warrior has his favorite girl (na sandja) (1).

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover os sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

83 sweetheart (*e-sanja*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'atwa* and *en-e-'atwa*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 583 837 The payment of the bridal price authorises a Masai to reckon the children which his wives bear as his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised, [834 835] sexual communism or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his oxen are laughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 684 If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*a-ar eng-anyit*).

843 833 [856] A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of 682 684 833 a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *ol-kishuroto*. All the women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 278 Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Masai*, p. 287. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 7½ years. See *The Masai*, p. 262.

Marriage.—The warriors may not marry till after the *R-Unoto*, and do not usually do so till after their first *Ol-Ng'esher*. The case stated by Mr. Leakey,[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. 561 582 584 [585] [833]

The cattle required for the bride-price are payable on the birth of the first child, and cannot be reclaimed if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where lives a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the restrictions (*see* p. 202) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle. 583 561 837 [684]

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation find that a man of another has had intercourse with one of their women. [978]

If a woman who has borne children leaves her husband and lives apart from him, he waits till his eldest son is old enough, and then sends him to fetch her back. 586

A man may not have sexual intercourse with the wife of his full brother (mother's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister. 835

A husband and wife may not call each other by their names. 551 [593]

Father-in-law
Mother-in-law
Son-in-law
Daughter-in-law
} Must not be addressed by name.

Family.—The name for a family is *Ol Marei*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Masaini oinoti*, he is proud of the fact. 602

Death and Burial.—Dead bodies are disposed of by the hyænas, except for those of *Laibons* or very influential old men. These are buried under cairns of stones. 764 766

[1] *See* p. 200 of this volume.

FL12 Masai FL12

101 claim to belong to them live elsewhere. Merker gives as the
634 principal divisions three provinces, Kisongo, Loita, and
101 Olbruggo. This is perhaps not according to Masai traditions,
634 but is not incorrect as a practical description of the present
635 distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there
614 are four clans representing genealogical not territorial divisions: Aiser, Mengana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-l-Aiser, the mountain of the Aiser.

561 According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first
[304] stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circum-
561 cised about the same time (see p. 261 for details) are said
884 to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the
[302] Invincibles.' After circumcision the warriors plait their
[291] hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis),
[262] go absolutely naked. They subsist entirely on meat, milk,
[276] and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in
342 separate kraals with the immature unmarried girls, with
836 whom they are allowed to cohabit freely. Tradition[1] (see
561 p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when
[177] the Masai kept to themselves. Now that they have come
[764] into contact with civilization, prostitution and venereal disease
[548] have become deplorably frequent. About the age of twenty-
561 seven or thirty, or nowadays when raiding is forbidden
885 somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar
[171] customs of free love.

Marriage[1].

When a Masai wishes to marry, he commences his courtship by making love to a girl while she is still young, and by presenting some tobacco to her father.

He then waits until the girl grows up, when he again offers presents of honey and tobacco.

More honey is given to the father at his daughter's circumcision.

On the young woman's recovery the man proceeds to his future father-in-law's kraal, and takes with him the dowry, viz. three heifers and two bullocks, one of the latter being said to keep the heifers company, whilst the other is slaughtered at the door of the hut. His sister also takes a pot of honey and accompanies him.

The bullock which accompanies the heifers is given to the bride's father in order that the two men may call one another Pakiteng, i.e. the giver and receiver of a bullock, or father and son-in-law.

When the time arrives for the husband to fetch his wife, he takes with him three sheep (two rams and a young ewe). The ewe he presents to the mother to enable them to call one another Pakerr, i.e. the giver and receiver of a sheep, or mother and son-in-law.

The two rams are slaughtered together with two others, which the girl's father provides.

[1] Formerly no Masai was able to marry until he had been on several raids, but nowadays they leave the ranks of the warriors (il-murran) and settle down as married men (il-mōruak) at a comparatively early age.

Crimes: Theft.

If a Masai steals milk, or meat, or other small things, he is not fined.

Grown up people, however, rarely steal, it is the boys who take the milk and meat, &c.

Whilst the Masai do not consider it wrong to steal trifles of this nature, they dislike immensely having their cattle stolen.

Should any warriors steal an ox and be caught by the owner, they would have to pay; and if three men took part in the theft, each would have to pay three heifers.

In the event of the owner following up the thieves and catching them in the act of slaughtering the stolen animal, one of the warriors might see him and call out 'Guilty,' in which case he would not be fined heavily. Whilst the others would be fined in heifers, he who had cried 'Guilty' would only have to pay a young bull. Were all of them to cry 'Guilty,' they would all be fined in young bulls.

Adultery.

No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed.

Should he be cursed, he pays two oxen (one in lieu of honey-wine), and he prays the elders to remove the curse. The elders eat the ox when they drink their honey-wine.

But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence[2].

[1] This law is not always put into force. The murdered man's relations are often willing to make peace on payment of a heavy fine, say 100 head of cattle.

[595] [2] From this it will be seen that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age.

FL12 Masai FL12

262 opened a vein and drank the blood fresh from the animal.
884 This proceeding of our voracious young friends was a wise though repulsive one, as the blood thus drunk provided the
[263] salts so necessary in the human economy; for the Masai do *not partake of any salt in its common form.* This sanguinary draught concluded, they proceeded to gorge themselves on the flesh, eating from morning till night—and keeping their cook steadily at work. The half-dozen men were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to resume the milk diet.

884 If they lived an ascetic life in the matter of food, they could not be said to do so in other ways. Life in the
836 warriors' kraal, as may easily be conceived, was promiscuous in a remarkable degree. They may, indeed, be described as a colony of free lovers. Curiously enough the "sweetheart" system was largely in vogue, though no one confined his or her attentions to one only. Each girl, in fact, had several sweethearts, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Ditto and El-moran, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

884 Till a war-raid was planned, Moran, our interesting
517 *protégé*, found he had nothing to do but make acquaintances and amuse himself with the girls. His cattle were looked
701 after by some poor menials, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no fence for protection was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his muscle by the peculiar mode of dancing described in the Taveta chapter. Unlike negro tribes, they led what might be called a serious life. They had no rollicking fun, no moonlight dancing, no
[533] lively songs, no thundering drums. No musical instrument
[534] whatsoever enlivened the Masai life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything hushed up in silence.

624 Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Lytunu* and a *Lygonani*.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

as the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) "without the sanction of the paramount chief and the representatives of the Masai tribe." 631 648

As a people of Nilo-Hamitic origin, the Masai have an affinity to the Nandi, Kipsigis, Suk and Turkana of the Keyna Colony, but they have maintained more of their original custom and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the extent and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions lent assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their recruitment during the War of 1914-1918. 101 648

The social structure of the Masai has from the outset created an obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (sirit) living in separate villages (manyatta) often of a considerable size, and the larger manyattas had their own "Counsellors" (L'Aiganak) chosen from among the Moran. 561 701 [361]

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligation save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe or periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, "drank milk" and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, "the Elders' ideal of existence seemed to be ease, not unmixed with drunkenness."[1] Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare. [836] [622]

There is another feature of importance in the social structure. The Masai are divided into Sections (Alosho) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most wealthy. Each of these Sections has its own Age Grades, so that the period at which youths become Moran, or Moran became Elders at the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation 634 [623]

[1] Introduction to The Masai, by A. C. Hollis, 1905. For the significance of the E-Unoto ceremony see page 69 of the Administrative and Political History of the Masai quoted above.

Kisonko

595 number of women available; at times a poor relation will join in a gate with a richer one; again, mothers and mothers-in-law and deceased brothers' wives are frequently included; and nowadays married warriors [592] are found staying on with their fathers. Thus a symmetrically arranged 'gate' is seldom found in practice.

The practical effect of this system is that a Masai elder attempts to main a constant succession of wives, marrying new ones to replace those who depart with their sons. As there are no unmarried adult women amongst the Masai, this means that senile old men take to wife girls only just past the age of puberty. As such girls have previously been accustomed to the companionship, both sexual and social, of the moran, it is little to be wondered at that they frequently run away, or attempt to run away, with their erstwhile companions. The elders have no idea of preventing this by making the girls' married life more attractive than their previous one; their only remedy is force.

The two primary motives for polygamy are the desire for children, [152] and the necessity to have women to tend the cattle. There is little sexual jealousy amongst the Masai; within the age-set the wives are [836 837] communal to all age-mates, and an age-mate known to be the father of one's child is regarded as a special friend. Intercourse between men of one age and the wives of another is nominally prohibited, but its [572] extensive practice is acknowledged by the Masai, and in fact receives general connivance. Concerning the economic motive for polygamy, increasing herds necessitate more women to tend them, and at the same time offer the means of obtaining such women. Not that the actual [583] dowry is heavy — usually three heifers and a bullock — but a man prefers to marry off his daughters to a rich elder, rather than to a poor moran. Thus economics and sociology are closely linked, and action in one sphere will have repercussions in the other.

162 595 The extent to which polygyny is practised can be judged from the following table :—

Distribution of Wives amongst Adult Male Population.

	Kibaya		*Samatwa*		*Engasumet*		*Longido*		*Total*	
	men	wives	men	wives	men	wives	men	wives	men	wives

Kenya

particular relation. The naming ceremony is as follows:—When the child can run about a *small* ram is chosen and killed by the women of the village and eaten by them (and not by any men). The child is then given a name which is chosen by the assembled women. It is usually named after some friend of the family either living or deceased, and great care is taken that the person after whom the child is named is (or was) good-looking and of good character, as otherwise the child would grow up ugly and of an evil nature. This is the name used by the family and by friends, but after initiation a boy is always called "Son of 'so-and-so,'" and not by his own name (except by his family). After a man is married and has named sons of his own he is called "Father of 'so-and-so.'" 553 551

Teeth Extraction.—As soon as a child of either sex has cut all its milk-teeth the two central lower incisors are knocked out, and this operation is repeated when the permanent teeth grow. There is no ceremony attached to this removal of the teeth, which is performed with a small, sharp two-edged knife. The reason given for this practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, water and gruel can be poured in through the hole so formed. 304 [852] [412] [758]

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced in the cartilage round the upper part of the ear, and as soon as the boys start herding cattle and the girls start drawing water they have the lobes of the ears pierced. Ears are pierced in order to prepare them for carrying ornaments, and the holes are stretched to the size which the individual requires by means of a gradual increase in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their early days, but I could not obtain any details from my informants. 524

Clothing.—From a very early age children are given small bits of skin as clothing, and the boys have small sandals made for them. 291

Food.—The food of children is the same as that of grown-ups and is restricted to milk, fat, and meat, as no crops are grown. 262

PART II.—BOYHOOD.

Herding.—As soon as they are considered old enough (and this depends upon the number of other boys in the family available for this work), boys are sent to help herd the sheep and cattle, and they continue to do so until they are old enough to start preparing for initiation. 857

Sex Life.—Initiation is often delayed until some little time after puberty, and it is not considered in any way wrong for these boys to begin indulging sexually as soon as they like, provided that they observe certain restrictions. They may do as they like with the younger girls in the neighbouring villages, provided, of course, that they observe the law forbidding sexual relations with any member of their own sub-clan, 836 883 684 [834]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

836 883 684 [834] and also provided they avoid such young girls as are attached to men in the warrior classes. That these young uninitiated lads even try to have intercourse with married women is certain, as there is a special penalty provided for women who so debase themselves. (*See* Marriage.)

881 561 *Preparation for Initiation.*—No boy is allowed to think about preparing for initiation until he can show a growth of facial hair indicating puberty. Boys are always very anxious to be initiated as soon as possible, and as soon as they consider that they can make a reasonable claim that they are old enough, they form themselves into groups of anything from six to a dozen, dress themselves in new calf-skins, and, taking with them bows and arrows, go out on a tour of all the villages of the district announcing that they are candidates for initiation and demanding presents. These groups are called *olamal*, and by long custom they must be given anything they ask for which is within reason.

Custom dictates that they shall ask especially for honey and hyrax-skin karosses, [431] and these they take and present to senior and influential elders belonging to various circumcision groups, at the same time requesting them to bring up the question of their initiation at the councils, and to make all the necessary arrangements. There is often a delay of anything from six months to a year before the consent of the councils is obtained and arrangements are set on foot. In the meantime the groups of boys continue on their visiting tours collecting more presents as further persuasion to the elders to do as requested, and fresh groups of boys are formed and add themselves to the number of the candidates for initiation.

During the whole time that these *olamal* groups are wandering about from village [836] to village they may sleep with any of the uninitiated girls in the villages which they visit (even those who are attached to young warriors), provided that they observe the normal restrictions of the warrior classes.

Ceremony of Seizing the Ox by the Horns.—When at length the elders have consented to proceed with the initiation ceremonies, those elders to whom the presents of honey and hyrax-skins were given make the necessary arrangements for the ceremony of seizing the horns of the black ox. These elders select a village of some elder of the [614] Lukumai sub-clan (the ox must always be supplied by a member of this sub-clan), and demand a black ox without any defect and without any trace of other colour on any part of its body. Should the owner of the selected village not possess such an ox he must obtain one from another member of the Lukumai sub-clan, and if he cannot do so he must obtain it from another clan by purchase or exchange, and present it to the elders. This ox is called *oregeteng*.

When the ox has been procured, a special village is built near where the ox was obtained, and a day is fixed for the horn-seizing ceremony. Only those of the candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

561 place until the two senior groups move out together into the elders' class. The result of this arrangement is that no group which enters the warrior class as *murategedienye* ever stays in the warrior class for as long as any *jangienobur* group.

56 62 59 [361] [634] *Manyattas.*—During their time of service in the warrior class the members of each age-group live in special villages built away from the main married men's villages. These villages are territorial, in that all the warriors of a single age-group in a single area live in one such village. Warriors of different age-groups never live in a single *manyatta*, as each *manyatta* is essentially the headquarters of the members of a single age-group in the warrior class in a given area. *Manyattas* are moved about from place to place when fresh grazing is necessary.

62 561 A *manyatta* consists of a number of huts each one of which is built, and lived in, by the mother (or another married woman relative) of one of the warriors of that *manyatta*. Normally each warrior has his own mother living in the *manyatta* and she is accompanied by her children, especially by some of the man's uninitiated sisters and half-sisters. The elder women are there to do the work of the *manyatta*, [462] such as milking, fuel gathering, water drawing, etc., and in this they are assisted to a certain extent by the girls, but the latter are chiefly in the *manyattas* as companions and lovers for the warriors. No girl can live at a *manyatta* at all unless her brother or half-brother is a member of that *manyatta*, and each warrior living at a *manyatta* is expected to bring two or three of his sisters or half-sisters to live at the *manyatta*, and if possible some of these should be fairly grown up and others quite children who will grow up at the *manyatta*.

836 561 *Sex Life.*—During the warrior stage no man may have sexual intercourse with any initiated girl or with married women, but on the other hand, there exists in the *manyattas* a system of sex life which is decidedly interesting. The warriors, whenever they feel like it (which, as my informant pointed out, is "very, very often"), invite one of the girls (sisters of the other men in the *Manyatta*) to sleep with them. [201] This is done by a method and formula which corresponds in some ways to the [832] *umbani* of the Kikuyu peoples, but has certain marked differences. [971]

A group of warriors at any time of the day will stand outside the village and call to any of the girls whom they see about, and when they come they say to them *tasiukiu*, and the girls then each select one of the men, and say "I choose so-and-so," not mentioning the man by his own name but as "the son of so-and-so." By so doing the girl binds herself to go and sleep with the man so chosen that night. It is a point of honour and etiquette that no girl so called upon to choose a man may refuse to do so unless she is (*a*) actually at a menstruation period at the time, or (*b*) has already promised herself to another man for that night, but she may make her choice from any of those men who were in the group that called to her.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Before dealing with the subsequent procedure, after a girl has promised to visit a warrior on a given night, it is necessary to outline the sleeping arrangements and accommodation in a *manyatta* hut. The hut is not divided off into rooms in any way, and at one end of the hut is the bed upon which the woman (mother of one of the warriors) to whom the hut belongs, sleeps with her younger children. At the other end of the hut, not screened off in any way, is the bed upon which the warriors and girls sleep. No warrior may ever sleep upon the married woman's bed, but the woman's husband can come down and visit her whenever he likes, and when he does so, no warriors or girls may sleep in the hut. Ordinarily, however, the woman's husband does not live at the *manyatta*, and she and her small children sleep on her bed at the one end of the hut, while the warriors sleep on the bed at the other end of the hut with the girls. No warrior ever sleeps in his own mother's hut, but always in one of the other huts if he has invited a girl to sleep the night with him. When, therefore, he has arranged for a girl to visit him at night he goes in the evening to one of the other huts and arranges to sleep on the young people's bed there. He then sends a message by the woman who owns the hut to tell the girl that he is sleeping there so that she may come to him. There is absolutely no objection to several men coming in this way to the same hut, and sleeping on the same big bed each accompanied by his girl. In fact, it is considered wrong for a warrior and a girl to have sexual intercourse unless there are also other couples sleeping on the same bed. Moreover, besides those men who have come to the hut and sent for their girls to join them there, there are usually several younger girls, daughters of the woman who owns the hut, sleeping on the bed too. These young girls, too young as yet to sleep with the men sexually, nevertheless, sleep on the same bed as the warriors and older girls, and thus grow up steeped in the customs of the *manyatta*.

836 561 513 [342] [352] [833]

It is exceptionally difficult for a European to understand all the full details and facts concerning native sex life, but the following facts have been noted and verified for the Masai. No girl may sleep with a man except she be absolutely nude, but on the other hand, although by tradition and by etiquette she may not refuse an invitation to sleep with a man (except for the two reasons already given above), she is not necessarily expected to allow him full sexual intercourse, and, in fact, often does not do so. Thus—strange as it may seem—Masai girls do sometimes go to their husbands as virgins in the physical sense of the word (*see* Marriage), although they may have slept with men in the *manyattas* countless times. Usually, however, Masai girls have no objection to full intercourse except during the first four or five days after each menstrual period (*see* Girlhood), for the Masai firmly believe that conception cannot occur unless intercourse takes place very soon after menstruation, and four to five days is considered an absolutely safe margin. Moreover, this belief seems to have a strong foundation in fact, and it thus raises a very interesting point for physiologists as to whether this is as true of primitive peoples as it

836 833 561 [576] [585] 836 842 561

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

836 is of animals. It is apparently this fact which explains why there are so
842 few cases of uninitiated girls conceiving despite the Manyatta sexual organization.
561 My informants insist that cases of conception only occur when a girl has been persuaded by a man to have full intercourse just after her menstruation. It is quite easy for a girl to see to it that she does not have full intercourse if she does not want it, since there are always at least two other couples sleeping on the same bed, and there is also always a married woman in the same hut to see to it that no force is used by the men.

(For details of procedure should an uninitiated girl conceive, *see* Girlhood.)

836 *Permanent Lovers.*—Besides the casual day-to-day lovers described above,
561 a girl very often has a more permanent lover in the *manyatta* in which she lives, chosen from among the ranks of those who have been her casual lovers. The actual
836 choosing ceremony takes place in public, but the choice is usually made privately
584 beforehand. This permanent lover in some cases will eventually be the girl's
561 husband, but this is not usual, as nearly every Masai girl is betrothed during childhood (*see* Marriage), and usually girls are quite content to marry those to whom they were thus betrothed. Should a girl be unwilling to marry the man to whom she is betrothed she usually contrives to become pregnant by her "permanent lover" and to persuade him to marry her (*see* Girlhood).

The actual ceremony of selecting a "permanent lover" takes place as a public
836 affair. A group of the warriors, including the man, collect together and one of
561 the man's friends then summons the girl and hands her a spear, and she is told to go and give it to the man she choses as "permanent lover." Having thus been publicly accepted, the warrior from then on becomes responsible for supplying the girl with such ornaments and necklaces as she may need from time to time, and he also gives her a special necklace to be worn as a token. After this ceremony she continues as before to sleep with any of the warriors who may ask her to do so in the way detailed above (*see* Sex Life). Equally the man may sleep with any of the other girls, but the girl and her "permanent lover" can arrange to sleep together without adopting the usual formula and procedure.

561 *The Eunutu Ceremony.*—After nine years of Junior Warriorhood a big cere-
[484] mony called *Eunutu* takes place, at which all the members of a given group from the whole of the Masai country, north, south, east, and west, are required to be present. This ceremony marks their rise from Junior to Senior Warriorhood. During the whole of the nine years of Junior Warriorhood they have not been
[302] allowed to shave their heads at all, but their hair has been gradually tied and trained into a long pigtail at the back of the head, which is the sign of Junior Warriorhood. (The only exception to this rule of not shaving the head during Junior Warriorhood is in case of severe illness, when the head may be shaved if so desired.)

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Summary of Warriorhood.

From boyhood upwards to the Elders' stage there are the following recognized steps, each with appropriate "rites de passage," except in the last stage. 561

(1) *Candidate Stage.*—After the boys have attained puberty, as shown by the first signs of hair growth on the face, they form bands who wander about the country receiving presents, and finally there is the horn-seizing ceremony, after which the candidates are circumcised and enter the novice stage. [881]

(2) *Novice Stage.*—No sex life is permitted to novices, who during their novitiate wander about with bows and arrows shooting birds for head-dresses. This stage is concluded by a head-shaving ceremony, after which the novices enter full warriorhood.

(3) *Junior Warrior Stage.*—This is a period of roughly nine years from the end of the novitiate. During this time—with certain exceptions—no warrior may shave the hair off his head. Life is in the *manyattas.* This period is concluded by the *Eunutu* ceremony and a general head-shaving which marks the entry into the senior warrior stage.

(4) *Senior Warrior Stage.*—Warriors remain in this class until there are two age-groups in it, and then transfer to the Elders' group. Transfer from the senior warrior stage to the Elders' stage cannot take place unless there are two age-groups ready to move up together.

PART IV.—GIRLHOOD.

Work.—As soon as girls are old enough to do so, at the age of about seven, they start helping their mothers and sisters in the general work of the village, sweeping out the huts, milking the cows, nursing the children, drawing water and sewing skins. There is, however, one sort of work which is never done by any uninitiated girl, and that is getting firewood. This work is specially reserved for married women. The girls' work may either be in the home village or else in a warrior's *manyatta*, should they have brothers living in a *manyatta.* 857 [313 581]

Sex Life.—From a very early age indeed the young girls imbibe the general atmosphere of Masai sex life. As already mentioned, those of them who have brothers living in the *manyattas* sleep from a very early age—long before puberty—on the same beds as couples indulging in sexual intercourse; and even those girls who live in the home villages learn all about such matters at a very early age owing to the fact that they always sleep on their mother's bed. As soon as ever the first signs of puberty are noticeable, girls may be asked by the warriors to sleep with them, and the question of whether there is complete intercourse or not rests then entirely with the girls. Moreover, the uninitiated boys, and especially those who tour the villages as candidates for initiation, expect any young girls who are not already 864 883 836

883 attached to the warriors to sleep with them. In fact, we may say that for the girls
836 sex life starts before puberty and continues (with no such period of sexual prohibition as the boys have during the novice stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that
[834] sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

841 *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refuse all invitations to sleep with men or boys. There is no restriction of work during the menstrual
[171] period as there is among some Bantu tribes, but a girl or woman must wash her hands before milking if she is menstruating.

842 *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special teaching about this, girls grow up with this knowledge and take care not to allow full intercourse during the few days immediately following menstruation. Occasionally, of course, a girl does allow sexual intercourse at this time, either because she is carried away by sexual desire, or because she deliberately wishes to conceive for some reason or another (*see* Warriorhood). In the former case she will try to bring about abortion.

847 *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she sends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortificant. This is the only method used.

848 *Penalty for Conception.*—If an uninitiated girl conceives and her condition
598 becomes known she must immediately be initiated. In the normal way (*see* below)
884 her initiation would take place at her mother's house and the necessary arrangements would be made by her father, but if she is to be initiated because she is with child the onus of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. Not only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one heifer and a quantity of beer to the girl's father, "because he has prevented the father

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

As stated above, *Ol Piron* means a firestick. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Ol Piron* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has considerable political as well as domestic importance. 561

Manyattas.—The *sirit* is the unit for a single *manyatta*, except when the whole age-group of a single area combine to form one *manyatta* for some ceremony, *e.g.* the *E-Unoto.* 561 361 648

For some years the policy of Government was directed towards suppressing the warrior system, and *manyattas* were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have *manyattas* provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what these were. The main political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 561 177 361

Nowadays the parents are somewhat unwilling that the girls should live in the *manyattas*, and so there are only a few of them to be seen there.

A *manyatta* usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey *tasiukiu* would perhaps best be spelt as two words *Tasioki iyook*. *Tasioki* is a second person singular imperative of a dative word (*see* Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Iyook* means "we" or "us." 836 [193] [114]

When a man has been accepted by a girl who has been so addressed he usually holds out his hand to her with the tips of his forefinger and thumb touching to form a circle. She is then supposed to break the circle so formed with her forefinger. This is regarded as making her acceptance binding. [201] [832]

It is a great disgrace for a warrior to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 842 154

The E-Unoto Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 561 884

In the first descending generation, the word *en-kerai*, "child," may be applied to son, daughter, brother's son and daughter, and father's brother's son's son and daughter, or they may be distinguished as masc. *ol-ayioni*, "boy," and fem. *en-tito*, "girl." Father's brother's daughter's son is *ol-aputani*, and father's brother's daughter's daughter *en-e-sotua*, the latter term applying also to father's sister's daughter's daughter, and mother's sister's son's daughter. The term *o-le-sotua* is applied to the mother's brother's daughter's son, mother's sister's son's son, mother's sister's daughter's son, and father's sister's daughter's son. *O-le-nk-apu* is applied to the sons of father's sister's son and mother's brother's son, and *en-e-nk-apu* to their daughters. In this generation there are no terms for mother's brother's daughter's daughter, and mother's sister's daughter's daughter. 601

In the second descending generation, *ol-akui* includes the sons of a man's own son and daughter, brother's son, father's brother's son's son, father's brother's son's daughter; while *enk-akui* is applied to their daughters. Father's brother's daughter's son's son is *ol-aputani*, and the daughter is *en-e-sotua*. The term *o-le-nk-apu* covers son's son, and the sons of sister's son, father's sister's son's son, and mother's brother's son's son; their daughters are *en-e-nk-apu*. *O-le-sotua* includes the sons of sister's daughter, father's brother's daughter's daughter, father's sister's daughter's son, father's sister's son's daughter, mother's brother's son's daughter, mother's brother's daughter's son, mother's sister's son's son, mother's sister's son's daughter, and mother's sister's daughter's son; *en-e-nk-apu* is applied to the daughters. There are no terms for mother's brother's daughter's daughter's son and daughter, or for mother's sister's daughter's daughter's son and daughter.

Among affines, the term *ol-aputani* is applied to wife's father, wife's father's brother, and wife's brother, but their wives are *enk-aputani*, *en-e-sotua*, and *en-e-sotua* respectively. Son and grandson of wife's brother are also *ol-aputani*. Wife's sister is *e-sindani e-anyit*, and all children and grandchildren of wife's brother and sister (except wife's brother's son and grandson) are *-e-sotua*. The majority of affinal terms are in fact of the *-e-sotua* category. Husband is *ol-moruo* or *ol-payian*, wife *e-goroyioni* or *en-kitok;* junior wife is *enk-aini*.

These kinship terms, however, are not very much used, for it is the custom of the Masai to call each other by cattle-names: members of a domestic group give each other cattle on various occasions, and thereafter the word denoting the kind of animal given is used as the equivalent of a reciprocal relative term; the animal name is prefixed by *pa*, meaning "giver or receiver of." Thus, a father usually gives his son a bull when he is about 10 years old, and they then call each other *pa-oiyoni*, "giver (receiver) of a bull" instead of *papa* and *li-ayioni*. An elder brother will give a younger brother a heifer, and they will then be *pa-n-tawuo* (heifer) to each other. Paternal cousins often call each other *pa-meregesh* (ram). 551

Among these relatives, the mother's brother has great power and influence over his sister's son. He can give him orders, which must be obeyed, and he may take what he wants from his nephew, who has also the right to take what he wants from his uncle. Refusal to obey the mother's brother can be punished by cursing, but this is not reciprocal. Behaviour patterns are based on seniority and the claims of kinship, and are expressed in the avoidance of bad language and unseemly actions, and the observance of formality between certain persons. There is avoidance between a man and his wife's mother, and between a man and his full brother's wife, though not between him and his half-brother's wife. The formality of greetings helps to preserve the respect for elderhood. 604 602 606 607 888

Pre-marital Sex-life

A man's sex-life begins when he has been circumcised; a girl's when she reaches puberty. Pre-marital relations are more formalized than among the Nandi, since the unmarried warriors of a local company, *sirit*, live in a barrack, *e-manyata*, with their mothers, some of their sisters, and their girl lovers, *e-sanca*, each man having his own lover. The rules which regulate marriage apply in the selection of a lover. 836

[Warrior Kraal]

/84 cont./

836 701 Every warrior has his favorite girl (na sandja) (1).

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover os sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
• 836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
[343] dividual ones. Thus everyone remains responsible for the barricading
[672] of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on ac-
701 count of the lack of milk. Milk is the only food that the Ol morani
262 takes in the kraal, and the lack of it is therefore especially grievous.
264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e buli) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

512 knees. The row of girls moves forward up to the warriors with short,
535 stamping steps, bending their knees and swaying their upper bodies.
701 As a rule the dance ends when each girl whose lover is absent ap-
• [836] proaches one of the dancing warriors in short high-jumps. This is an
[832] invitation to a rendezvous, which the one concerned answers in
[533] similar fashion as a sign of consent. The dance is always accom-
panied by singing. Shortly before sunset all return to the kraal.

701
535

Ill. 34. Dance in the warrior kraal III. 1/4 C. G. Schillings phot.

512
701 Soon afterwards the livestock returns home, and, after it is milked,
[234] the people take the evening meal (en daã e téiba = food in the even-
[264] ing), again consisting of milk. After that the dancing of warriors
[272] and girls begins anew on a small open place in the kraal, close to
[535] the entrance, and is interrupted only from time to time in order to
moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234 1/4, [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

/345 cont./

182 Harmful to the child's health, on the other hand, are the poor huts,
165 which are always /346/ filled with dense smoke, and furthermore
854 the lack of cleanliness and the faulty diet. The belief, widespread
[362 among all African primitive peoples, that fat gives strength and
853 health leads to the stuffing of the baby, despite all its struggles and
146 screams, with unbelievable quantities of butter. Soor, as well as
856 stomach and intestinal affections, and ailments of the respiratory
164] organs are therefore also the principal illnesses that carry off the
babies. If one compares the high mortality among children with
the very low one in later life, and if one further considers that, in
inspecting the Masai kraals, one finds almost only healthy people
full of energy, one cannot resist the thought that the treatment of
the children, especially the babies, unconsciously aims at culling
out all the weak elements at an early age and preserving for the
people only the most vigorous ones that are equal to the demands
of life. Seen from this standpoint, that of natural selection, the
high child mortality seems less unfortunate. Finally, the late age
182 at which the men enter their first marriage is unfavorable for popu-
582 lation increase. Until about the 28th or 30th year of life the Masai
836 belongs to the warrior standing, and he may marry only after leaving
839 it. This circumstance in turn makes free love, such as exists in the
warrior kraals, an understandable social institution. One must judge
this arrangement on the soil in which it grows, in order to remain
objective. From the same standpoint we shall have to judge more
leniently the free love existing among the married, which, despite
numerous restrictions, appears to us like a continuous prostitution
[548] of the woman. One can do this all the more since through that pro-
fessional prostitution is excluded here, and consequently the possi-
bility of infection is greatly reduced; this last circumstance is un-
doubtedly to be regarded as people-preserving. Actually the Masai
[164] maintain that in former times (before the great livestock epidemics)
venereal diseases only very rarely occurred. Immorality is rightly
182 regarded as a people-destroying factor, and history teaches us by
831 many examples how licentious and refined sensuality was one of
the grounds that caused the decline of higher peoples. Here among
the Masai, however, it is not a matter of this unnatural kind of

411 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

561 701 [712] [562] [836] Originally during the period of warriorhood the morani were not expected to do any work except fight. They lived in a separate village, called a manyatta, and were generally taken care of by the unmarried girls of the tribe. Discipline was reputed to have been extremely good. The warriors had older advisors whom they obeyed.

224 [223] [301] [411] Ostrich's were hunted to obtain feathers for ornaments, buffalo and giraffe for shields, and lion for the highly prized mane. Traditionally the moran was expected to blood his spear on a lion. The dramatic Masai lion hunts are famous. (Simon, 1962). At 177 178 present warfare and lion hunting are illegal. The obvious 561 701 result is a large body of young men with absolutely 224 nothing to do for a period of up to 15 years of what 721 could be the most energetic period of their lives. *[233] They tend the livestock some, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the morani than they did

561 He may marry when he is a senior warrior. When he becomes
593 an elder he may take his mother (if he wants) and her
591
[582] share of the family cattle (for each wife has a given
[422] share of cattle) and move off to join others in a village
[562] (Fosbrooke, 1948).

561 The unmarried girls of the tribe live in the
• 836 warrior's manyattas and normally each moran has one
[583] favorite girl who becomes his concubine. They told us
that usually that girl became the warrior's first wife.

621 (c) Villages: Villages consist of a group
of families, often about five but sometimes more or
less. The villages are commonly called bomas or
361 (improperly) manyattas. Each boma consists of an outer
#233 circular thorn fence with a series of gates, one for
[417] each Masai elder. Within the gates there are a series of
huts. Often around the huts are small thorn fences
in which young livestock are kept. The cattle of the
village are normally herded into the space in the center
of the boma each night for protection from two and
four legged predators, and in the morning they are taken
back out to graze.

595 When a Masai marries, his first wife builds
on the right of his gate, his second on the left,

Masai until two years have elapsed, for they say that the dead man's head is still fresh[1].

When one Masai kills another, it is called committing murder, it is not called killing. Killing is only used when referring to savages.

If a warrior strikes another and tears the lobe of his ear, he has to pay a young ewe. If he breaks a bone, either in his leg, arm, or head, he has to pay a heifer.

If a boy is murdered, the amount which has to be paid is not as great as for a warrior, the price being fifty young bulls.

En-giopo.

Adultery.

No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed.

Should he be cursed, he pays two oxen (one in lieu of honey-wine), and he prays the elders to remove the curse. The elders eat the ox when they drink their honey-wine.

But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence[2].

[1] This law is not always put into force. The murdered man's relations are often willing to make peace on payment of a heavy fine, say 100 head of cattle.

[595] [2] From this it will be seen that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

It is possible to consider that solidarity as a kind of class identity. 561
This identity does not exclude the possible variations and differentiations of class-members arising from individual differentiations of talents and character, from leadership, seniority and social prestige attached to the possession of a great number of wives and a large herd of cattle. The main expressions of that identity are the use of a single name for the whole class and some special marriage regulations which apply to class members and, to some extent, to their children.

Thus, a man may not marry the daughter of a member of his own class. If he fornicates with her he is punished by his own age-mates. " His kraal is destroyed, he is severely beaten, and a number of his oxen are slaughtered ". Similarly, " if a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade (or class), he is solemnly cursed by the members of that age-grade ". (HOLLIS). Furthermore, any class member when a guest of any of his age-mates, has a right to cohabit with his host's wife. MERKER, says that a widow " must not re-marry but she must live with the members of her deceased husband's class ". This " sexual communism ", as HOLLIS calls it, takes place only among members of the same class. It is limited, of course, by clan and kinship exogamy, which, even for class members, is strictly enforced. [582] [684] [837] [587] [837] [582]

At the performance of the *Embolosat*, *Engibata*, *Unoto*, *Ngeherr* names are given to sets instituted. Names assumed at the *Embolosat*, *Engibata*, and *Unoto* are temporary, for temporary is the nature of the set thus established. At the *Ngeherr*-proper all previous names are discarded for a single name which is final and applies to the age-class as a whole. It is this name which is handed down to the following generations. Age-class names are, as it were, the milestones by which Masai can order their past into a certain historical perspective. Class names are thus recalled when historical facts are recounted. 561 552

Lists of class-names have been recorded by our authorities. It may be of interest to reproduce here some of those lists collected by MERKER, FOX, and FOSBROOKE.[166] FOSBROOKE has attempted

has been shown them, he will enter one. When he has entered, the owner of the hut leaves him and goes to search for a place to sleep in... A Masai cannot refuse hospitality to a stranger (of his own age) for he is afraid that the other members of his age will curse him, and he will die ". [574] [959] [626]

[166] MERKER, *l. c.*, p. 289; FOX, *l. c.*, pp. 450, 462; FOSBROOKE, *l. c.*, pp. 11 s.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

83 sweetheart (*e-sanja*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'sōtwa* and *en-e-'sōtwa*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 The payment of the bridal price authorises a Masai to reckon the children
583 which his wives bear as his own; it further gives him a full measure of control
● 837 over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised,
[834 sexual communism or something very like it prevails between all the men of one
835] age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his oxen are laughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 If a man unintentionally commits incest—and it is quite conceivable that a
684 man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*a-ar eng-anyit*).

843 A man must abstain from having sexual intercourse with his wife as soon as
833 she becomes pregnant, and he may not again have connection with her until the
[856] child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of
682 a man having intercourse with a pregnant woman, and thereby causing her to
684 abort, he must submit to a punishment which is called *ol-kishuroto*. All the women of the neighbourhood collect together and, having stripped, seize the guilty
833 person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 Other occasions when the sexes may not have sexual intercourse are when
278

[1] For the rules regarding hospitality see *The Masai*, p. 267. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 7½ years. See *The Masai*, p. 262.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

885 becoming bald or developing grey hairs, but that he could not take the regulation dose of purgative as formerly. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite so strong as formerly. We can imagine how he would curse his luck and look fiendish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had sown his wild oats.

583 Casting about, he fixed upon a damsel after his heart.
885 The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was sealed to him. Then an
[304] operation was performed on the damsel. Recovered from its effects, she had to wait till the calving season, as abundance
[302] of milk is an indispensable requisite in the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the
[301] appearance of an old shoe-brush clotted up with blacking. Round the head she wore a band of cowries from which depended a number of strings, forming in fact the bridal
585 veil. At last the happy day arrived, and the final seal was
885 put upon the marriage by both parties disposing of their chain earrings, and substituting a double disc of copper wire arranged spirally. The lady also shaved her head, laid aside the garment of the ditto, and clothed herself with two skins, one suspended from the waist the other from the shoulder. Strangest of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moran had actually to wear the garment of a ditto for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's maiden clothes. What our friend's feelings were in this guise, I do not know, and this veracious chronicle does not admit of conjecture.

837 And now Moran's sole idea was to rear a brood of young
885 cattle-lifters, and so that he got them, he was not very
[842] particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable in a degree not consistent with a high level of morality. We shall here prudently follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

885 He was now wholly a changed being—as indeed who is
262 not when he gets married? His strict rules of diet were

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

595 number of women available; at times a poor relation will join in a gate with a richer one; again, mothers and mothers-in-law and deceased brothers' wives are frequently included; and nowadays married warriors [592] are found staying on with their fathers. Thus a symmetrically arranged 'gate' is seldom found in practice.

The practical effect of this system is that a Masai elder attempts to main a constant succession of wives, marrying new ones to replace those who depart with their sons. As there are no unmarried adult women amongst the Masai, this means that senile old men take to wife girls only just past the age of puberty. As such girls have previously been accustomed to the companionship, both sexual and social, of the moran, it is little to be wondered at that they frequently run away, or attempt to run away, with their erstwhile companions. The elders have no idea of preventing this by making the girls' married life more attractive than their previous one; their only remedy is force.

The two primary motives for polygamy are the desire for children, [152] and the necessity to have women to tend the cattle. There is little sexual jealousy amongst the Masai; within the age-set the wives are [836] communal to all age-mates, and an age-mate known to be the father [837] of one's child is regarded as a special friend. Intercourse between men of one age and the wives of another is nominally prohibited, but its [572] extensive practice is acknowledged by the Masai, and in fact receives general connivance. Concerning the economic motive for polygamy, increasing herds necessitate more women to tend them, and at the same time offer the means of obtaining such women. Not that the actual [583] dowry is heavy — usually three heifers and a bullock — but a man prefers to marry off his daughters to a rich elder, rather than to a poor moran. Thus economics and sociology are closely linked, and action in one sphere will have repercussions in the other.

162 595 The extent to which polygyny is practised can be judged from the following table :—

Distribution of Wives amongst Adult Male Population.

	Kibaya		*Samatiwa*		*Engasumet*		*Longido*		*Total*	
	men	wives	men	wives	men	wives	men	wives	men	wives

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

584 The method of betrothing an unborn child is as follows :—A man or boy wishing to do so seeks a pregnant woman (provided, of course, that her husband is not of his own sub-clan), and goes to her and anoints her on the stomach either with fat or with red ochre mixed with castor oil. By so doing he pledges that if the child born is a girl he will eventually marry her. Should the child be a boy he is bound to it in friendship for life. In the event of the child being a girl he must, from birth onwards, present the child with small gifts from time to time, and as the girl grows up supply her with such necklaces or ornaments as she may demand from him. A man or boy wishing to betroth himself to an infant girl does so simply by giving the child a necklace, and from then on he must supply her with such ornaments as she may require. Of course, a man must first of all ascertain that the child —whether unborn or an infant—is not already betrothed. A man may cancel a betrothal if he wishes to do so (but he cannot break his pledge of friendship with a boy in the case of a boy being born to a woman whom he anointed when she was pregnant), and the father of a girl may cancel betrothal by refusing to drink any more of the suitor's beer. If a girl, as she grows up, decides that she does not wish to marry the man to whom she is betrothed, she can easily avoid doing so by arranging with one of her lovers to have intercourse with her just after menstruation, and thereby conceiving. She then has the option of marrying this lover should he be willing.

584 884 *Normal Marriage* (*as a First Wife*).—It is clear from the above description of betrothal that it is unlikely that a girl will reach her time for initiation unbetrothed. Should she do so by any chance, her father would at once make every effort to find her a husband, probably from among the older men who already have several wives. Nor would the girl object in any way, for to be initiated and not be married directly afterwards would make her the laughing stock of all the neighbourhood. When a 585 girl is to be the first wife of a man, it usually means that her husband-to-be is still a member of a warrior group. This, of course, means that he cannot in the normal way live with his wife for some time. This fact, however, in no way interferes with the marriage ceremony and transaction, the presence of the husband not being considered in any way necessary.

[591] The respective fathers of the girl and of the man make all the arrangements and transactions when the girl is initiated (*see* below), and as soon as these have been concluded, and the girl has recovered from the operation and been through the shaving ceremony, she goes to the village of her husband's family, where she has already built herself a hut (or had it built for her by her friends).

As a married woman her main duty in life now is to bear children, just as it was her duty before initiation to avoid conception. If her husband is still in the warrior class and may, therefore, not have any sexual intercourse with her, this is no hindrance [837] to her in performing this duty, as she may now have intercourse with any married men of sub-clans other than her own.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Moreover, there will be no lack of married men willing to be the physical father of her children, since no married men may have intercourse with uninitiated girls, nor yet with their own wife or wives if with child. 585 837 843

Married women make a point of having intercourse immediately after menstruation in order to "get a child." All children born to a woman who is married are considered to be the children of her husband, no matter who their actual father may be. Owing to this system it may happen that by the time a man leaves the warrior stage and passes into the Elders' stage, and goes to live with his wife, he may find that she already has one or more children. 585 842 [561]

Normal Marriage (of a subsequent Wife).—In the case of a girl marrying a man who already has one or more wives, she simply goes to his village—where she has either already built a hut or had it built for her—as soon as the shaving ceremony is over after her initiation. She then lives with him in the normal way and he will probably be the physical father of her children, although not necessarily so, as she is permitted to have lovers if she wishes it, provided they are married men. 595 [837]

Forced Marriage.—It occasionally happens that the father of a man who is still in the warrior class decides for some reason or another that he wishes to have his son at home—wishes, in fact, that his son should leave the warrior stage before the age-group to which he belongs is due to move up to the Elders' stage en masse. In such a case he waits until the girl to whom his son is betrothed has been initiated and is ready for marriage (or even arranges for her initiation to be hastened) and then proceeds as follows. The marriage transaction having been completed and the girl's new hut built in the village, he sends for the girl and secludes her in the hut. He then arranges with some of the young men of the same age-group as his son to bring the youth to the village on some pretext or other. The usual pretext is that of going to the village to ask for a bullock for a meat feast (*see* Part IX). As soon as the village is reached these young men together with some older men seize the man and carry him forcibly to the girl's hut. The girl is alone in the hut; not even her mother may be present when the man is brought in. The two—man and girl—are forcibly held together so that their bodies touch. Once his body has touched hers (an initiated girl) in the presence of witnesses he cannot go back to the warrior group, and so has to remain and reconcile himself to premature married life with its restrictions. 585 561

Marriage of a Virgin.—There is a very curious custom connected with the marriage of a girl who is a virgin in the physical sense of the word, *i.e.* of a girl whose hymen has never been penetrated. Should a girl's husband find that his wife has come to him in this condition, he must send her back to her father's village the next morning carrying on her back a milk gourd without its stopper. This is a sign to her father that she went to her husband as a virgin, and her father must send her back to her husband with a gift in the form of a heifer as compensation to the husband. The husband may not himself perforate the hymen until this heifer has been received. 585

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

585 837 *Married Sex Life.*—Among the Masai (as already stated) a married woman's first duty to her husband is to bear him children, and husbands do not mind if their wives have intercourse with other men, provided that they do not do so actually at a time when their husbands want them themselves. Even in such a case—apart from private measures which a husband might take—there is no recognized punishment for the woman, or any legal claim against the man, provided, of course, he is a married man of a sub-clan other than the woman's own. [684]

834 *Sex Restrictions.*—There are, of course, certain definite regulations which must be observed, the chief of which are :—

(1) No woman may have intercourse while she is with child (not even with her husband).
(2) No woman may have intercourse during the actual period of menstruation.
(3) No married woman may have intercourse with an uninitiated boy.
(4) No man in the warrior class may have intercourse with a married woman.
(5) No married man may have intercourse with an uninitiated girl.
(6) No woman may have intercourse with a man who is the son of any member of her husband's own age-group ("They are as his own sons, whatever their clan may be").
(7) As already mentioned, the rule of sub-clan exogamy applies as much to general sex life as it does to marriage and, therefore, a woman must avoid all men of her own sub-clan.

684 PENALTIES FOR BREACHES OF THE ABOVE RESTRICTIONS.

Breach of No. 1.—There is no fixed punishment for a breach of this regulation, but the man would be accused of causing damage to the child, and should abortion take place later, or the child be born with any deformity, he would be held responsible.

Breach of No. 2.—There is no punishment for a breach of this regulation, but it is simply "Not done."

Breach of No. 3.—A woman who is found infringing this rule is severely punished in the following way. She is tied up and severely beaten by her husband, so that her whole skin is bruised, and then sheeps' urine is poured over the abrasions. This acid causes very severe pain for many hours. The boy is not punished, as the fault is held to be entirely that of the woman, who should know better. In actual practice the boy is expected to bring the husband a present of honey beer in order to placate him, and so avoid being cursed with a very potent curse. [431] [754]

Breach of No. 4.—There is no punishment for the woman who is found to have broken this rule, nor is there actual punishment for the man, save that if his sin is discovered he is dishonoured at once by his fellow age-group members, and even if not found out at once, his dishonourable conduct will be found out at the *Eunutu* ceremony (*see* p. 194), when his turn comes to enter the *thingira*.

Kenya

Marriage.—The warriors may not marry till after the *E-Unoto*, and do not usually do so till after their first *Ol-Ng'esher*. The case stated by Mr. Leakey,[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. 561 582 884 [585] [833]

The cattle required for the bride-price are payable on the birth of the first child, and cannot be reclaimed if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where lives a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the restrictions (*see* p. 202) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle. 583 561 837 [684]

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation find that a man of another has had intercourse with one of their women. [918]

If a woman who has borne children leaves her husband and lives apart from him, he waits till his eldest son is old enough, and then sends him to fetch her back. 586

A man may not have sexual intercourse with the wife of his full brother (mother's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister. 835

A husband and wife may not call each other by their names. 551 [593]

Father-in-law
Mother-in-law
Son-in-law
Daughter-in-law
} Must not be addressed by name.

Family.—The name for a family is *Ol Marei*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Masaini oinoti*, he is proud of the fact. 602

Death and Burial.—Dead bodies are disposed of by the hyænas, except for those of *Laibons* or very influential old men. These are buried under cairns of stones. 764 766

[1] *See* p. 200 of this volume.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

his father's home or in his own *manyata*. But it seems that a ceremony is performed which releases the husband from the prohibition on warriors having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers; she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 837 848

Polygyny

A man may have as many wives as he can pay for: one of Hollis's texts says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and over are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, *enh-ay*, the first wife on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. 595

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own *el-eji*) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A warrior is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uncircumcised boy. 837 684

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 586

Adoption

In the old days, children captured in war were often adopted; and even today, children of " foreigners " (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term " adoption " is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, *enh-aitoyioni*. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Hollis says till the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. 844 846 843 833 845

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother 553 852

/49 cont./

586 then temporarily move to her mother's, and the man has the right,
in the course of the next four or five months, to state definitively
[687] whether or not he wants to have the woman back. If he demands her
return, she must obey: otherwise she may marry again at the end of
[851] the stated period of time. The parents must then pay back the full
bride price to the divorced husband, though he may refuse to accept
it, and, to be sure, with the legal consequence that all the children
that the woman may still bear belong to him.

Her male relatives seek to persuade a runaway -- not divorced --
wife to return, at first amicably, and, if this is of no avail, by a
beating in the presence of the husband, while the husband, in that
he keeps the children to whom the woman gives birth, hopes to
achieve her return by means of mother love. It is said that only in
the rarest cases is there a lack of success, especially since no
[587] pleasant fate awaits the resisting woman. She may not legally marry
[837] again, and, if she goes to another man in order to remain with him
[851] permanently, the children arising from this affair belong to the man
whom she left. Though the principle is valid that all children re-
main with the father, he almost always keeps only the boys and leaves
the girls to the mother. The latter also takes along any male suckling
and keeps him, but only until he is weaned. Then she must return
him to his father. Divorce during a woman's pregnancy does not occur.
If two divorced spouses wish to remarry, /50/ the woman returns to
the man without any ceremony. Divorce is generally rather rare.
Usually the man lets the woman from whom he wishes to be separated
live peacefully in one of his huts, but he does not pay any attention
837 to her. Barrenness is not grounds for divorce, nor is marital infidelity
[586] on the part of the woman, a concept with which the Masai ethic is
not familiar (1).

1. /The following footnote is a translation of the Latin of the original source./ A husband entrusts his wife to the guest at night, while he himself spends the night outside the dwelling. To keep the wife from the guest is considered insulting. Wives are accustomed to sleeping at any time with interchanged

/50 cont./

•837 [851] /footnote 1 cont./ husbands. Babies to whom a woman has given birth from thus living with another man belong to the husband, even though they also call their genitor father.

847 They abort an immature fetus when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a potion are used, which are said to be innoxious during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

833 They are accustomed to having intercourse lying on their sides, the woman's upper knee placed over the man's loins. They do not customarily cohabit except at night. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would retain nothing but water.

[864] Boys and girls already begin to practice cohabitation at the age of eight to ten.

514 It is considered extremely shameless to break wind in the presence of women.

V.

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Confinement. -- Festivities in connection with the birth. -- Twins. -- Deformed child. -- Killing newborn children. -- Behavior of the woman in childbed. -- The newborn child. -- Childhood. -- Children's games.

843 853 183 As soon as the woman feels pregnant, the spouses separate until after the nursing period, which lasts approximately 1 1/2 to 2 years. Another man may not touch the woman during this period, any more than her husband. This stipulation, however, seems to be little

564 /111 cont./
326 luck and would cause their inhabitants illness and death for man
[777] and beast. Even in an emergency one never claims the hospitality
[574] of a blacksmith, any more than one ever grants him guest privileges.
[701] The warriors coming from blacksmith families do not live in the ordinary warrior kraals, but in the smaller blacksmith warrior-kraal (ol manjata l el moran l el konono) and only with daughters of blacksmiths. They do not set out for the battlefield with the other warriors either, but alone, and naturally bring along, since they /112/ are few in number, only a little booty each time, which then often enough is simply taken away from them by the other warriors. An-
[582] other Masai does not marry the daughter of an ol kononi, just as the latter's son dare not desire in marriage the daughter of a man who does not belong to the despised blacksmith caste. Even the extra-
[837] marital association with a woman or girl belonging to the black-smiths is regarded as disastrous for any other Masai. It is believed that he will sooner or later lose his mind, will never be able to become the father of a healthy child, or on the next field expedition he will be killed by the spear or arrow of an enemy. How despised
[784] the blacksmiths are is shown by the fact that a Masai does not dare
[192] to pronounce the word "ol kononi" after the onset of darkness (1).

564
326
114
784
192

1. More than once the people, when in camp, in the evening, I wanted to speak with them about the el konono, begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and thus also on the evening of December 31, 1901, when I was camped near a Tatoga settlement on the steppe southwest of Mburu. A lion then penetrated into my camp in the night and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the Masai made me responsible for this incident, "it would not have happened if you had not spoken about the el konono last evening; we have so often told you this."

/119 cont./

593 The Masai are animated by a deep feeling of solidarity; they
181 stand united against all foreigners. A sincere attachment and love
[186] bind the individual members of the family; they vie with one another in order to free a relative who has fallen into slavery. Thus, in 1896, the Masai who returned from the Berlin Exposition immediately used the greater part of their savings to buy back relatives who had become slaves during the great livestock epidemics around the year 1890. The tightest is the bond between parents, especially the mother, and children, as well as between brothers and sisters, looser between married people, where the lowly, oppressed position of the wife is of some importance.

181 The men scorn any kind of work. Only waging war is worthy of a
461 man. Large herds of livestock and many wives are his supreme
554 happiness. One who has both enjoys respect and prestige. One looks down on a poor devil. Truly poor people, however, are exceptions,
735 since relatives support one another in generous ways. One who does
602 not have such quickly finds accommodations as a rule with one who is well-to-do. He receives food and for that helps the women and children of his benefactor with their work (livestock-tending, kraal-building, night watch for the small livestock, etc.). The condition of /120/ poverty is also always only of brief duration; the poor man soon acquires some prosperity again through gifts from friends or a
574 share of the spoils of war. Toward friends, one is just as generous
[572] as one is good-natured; the hospitality to countrymen, no matter where they come from (with the exception of the blacksmiths, of course), is unlimited. Everyone offers a visitor whatever he happens to have in food and drink. Everything that the stranger needs or wishes is at his disposal. He reserves for himself a hut for the night
• [837] by sticking his spear in the ground in front of it; the host then seeks other quarters for the night and leaves home and wife to the guest. If a woman comes for a visit, the wife leaves the hut for the night, so that the stranger may take her place. Hospitality toward other peoples is known only if peace is concluded with them through the ceremony of infant exchange or through blood friendship. The
181 cruelty of the Masai is no greater than that of the other black peoples, for example, the Negroes neighboring the Masai. If they

/120 cont./ If they
181 spare women and children in war, it is not out of compassion, but
[567] solely in order to make them useful as slaves, whereas the Masai do
not keep such. In general one cannot attribute to them a lasting
vindictiveness toward their own kind. The Masai only in part
possesses the courage attributed to him. Their extraordinary impu-
dence often makes them appear more courageous than they really
[593] are. Their sensuality equals that of most East African tribes. The
• [837] wife is at the disposal of every man who belongs to the age class
[561] (both ol boror and ol adji) of her husband and desires her. It is
593 obvious that, as a result of such conditions and in conjunction with
the prevailing polygyny, there can be no question of a proper family
life in the higher sense. For her own husband the woman is espe-
cially the labor force that he needs for household and livestock
management and the means of fulfilling his wish for as many progeny
as possible. Accordingly her treatment depends on how she measures
562 up to these tasks. Moderate beatings are not uncommon, but rough
461 treatment almost never occurs. In contrast to the men loafing
[462] about lazily, the women are busy all day long. For the married
[517] women there are scarcely any amusements except dance and song;
they had their share of them before their marriage, when they could
have their fling in the warrior kraal. In public life, as well as with
respect to her own husband, the wife has no rights. Of course the
Masai woman does not regard her servile position as such. She knows
nothing else, and fortunately one does not miss a comfort that one
562 does not know. As soon, however, as she is transplanted from her
461 own tribe into a foreign one through kidnapping in war, her willing-
178 ness to work immediately comes to an end. The less oppressive
177 her new position is, the lazier and at the same time more demanding
she becomes. She suddenly regards herself as too good to work, and
her desire for clothing and adornment often increases immeasurably.
/121/ Accordingly, her interest in the household becomes less to the
point of disappearing and her passion for amusement great. The reason
for this phenomenon undoubtedly lies in the fact that she regards life
among the hated and despised el meg as a disgrace and the work re-
quired of her by them as an insult inflicted on her.

/345 cont./

182 Harmful to the child's health, on the other hand, are the poor huts,
165 which are always /346/ filled with dense smoke, and furthermore
854 the lack of cleanliness and the faulty diet. The belief, widespread
[362] among all African primitive peoples, that fat gives strength and
[853] health leads to the stuffing of the baby, despite all its struggles and
[146] screams, with unbelievable quantities of butter. Soor, as well as
[856] stomach and intestinal affections, and ailments of the respiratory
[164] organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in inspecting the Masai kraals, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, unconsciously aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age
182 at which the men enter their first marriage is unfavorable for popu-
582 lation increase. Until about the 28th or 30th year of life the Masai
836 belongs to the warrior standing, and he may marry only after leaving
837 it. This circumstance in turn makes free love, such as exists in the warrior kraals, an understandable social institution. One must judge this arrangement on the soil in which it grows, in order to remain objective. From the same standpoint we shall have to judge more leniently the free love existing among the married, which, despite numerous restrictions, appears to us like a continuous prostitution
[548] of the woman. One can do this all the more since through that professional prostitution is excluded here, and consequently the possibility of infection is greatly reduced; this last circumstance is undoubtedly to be regarded as people-preserving. Actually the Masai
[164] maintain that in former times (before the great livestock epidemics) venereal diseases only very rarely occurred. Immorality is rightly
182 regarded as a people-destroying factor, and history teaches us by
831 many examples how licentious and refined sensuality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

883 attached to the warriors to sleep with them. In fact, we may say that for the girls
836 sex life starts before puberty and continues (with no such period of sexual prohibition as the boys have during the novice stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that
[834] sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

841 *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refuse all invitations to sleep with men or boys. There is no restriction of work during the menstrual
[171] period as there is among some Bantu tribes, but a girl or woman must wash her hands before milking if she is menstruating.

842 *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special teaching about this, girls grow up with this knowledge and take care not to allow full intercourse during the few days immediately following menstruation. Occasionally, of course, a girl does allow sexual intercourse at this time, either because she is carried away by sexual desire, or because she deliberately wishes to conceive for some reason or another (*see* Warriorhood). In the former case she will try to bring about abortion.

847 *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she sends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortificant. This is the only method used.

848 *Penalty for Conception.*—If an uninitiated girl conceives and her condition
58 becomes known she must immediately be initiated. In the normal way (*see* below)
884 her initiation would take place at her mother's house and the necessary arrangements would be made by her father, but if she is to be initiated because she is with child the onus of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. Not only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one heifer and a quantity of beer to the girl's father, "because he has prevented the father

the hut were gathered together the goats of the kraal, mingling, so far as space permitted, with calves and grain. A number of large calabashes lay in one corner, and a coarsely-made earthen cooking-pot in another. Fleas in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which pertinaciously would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on the part of the mother, who heard with deep pleasure that her offspring was a boy. Girls are really at a discount among the Masai. They would always prefer to have boys, but happily nature sees about a little, and takes care that a fair

MASAI KRAAL, SHOWING CONVENIENCE OF CONCEALMENT.

supply of girls is provided. As there is no registrar or birth column, I am totally unable to state when our hero first saw the light. That, however, is a small matter. No particular ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly concealed on her back beneath the bullock's hide which formed the mother's garment.

Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew space. Getting above mother's milk, he was seen cementing his incipient teeth on a large chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

becoming bald or developing grey hairs, but that he could not take the regulation dose of purgative as formerly. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite so strong as formerly. We can imagine how he would curse his luck and look foolish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had sown his wild oats.

Casting about, he fixed upon a damsel after his heart. The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was sealed to him. Then an operation was performed on the damsel. Recovered from its effects, she had to wait till the calving season, as abundance of milk is an indispensable requisite in the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the appearance of an old shoe-brush clotted up with blacking. Round the head she wore a band of cowries from which depended a number of strings, forming in fact the bridal veil. At last the happy day arrived, and the final seal was put upon the marriage by both parties disposing of their chain earrings, and substituting a double disc of copper wire arranged spirally. The lady also shaved her head, laid aside the garment of the ditto, and clothed herself with two skins, one suspended from the waist the other from the shoulder. Strangest of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moran had actually to wear the garment of a ditto for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's maiden clothes. What our friend's feelings were in this guise, I do not know, and this veracious chronicle does not admit of conjecture.

And now Moran's sole idea was to rear a brood of young cattle-lifters, and so that he got them, he was not very particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable in a degree not consistent with a high level of morality. We shall here prudently follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

He was now wholly a changed being—as indeed who is not when he gets married! His strict rules of diet were

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Before dealing with the subsequent procedure, after a girl has promised to visit a warrior on a given night, it is necessary to outline the sleeping arrangements and accommodation in a *manyatta* hut. The hut is not divided off into rooms in any way, and at one end of the hut is the bed upon which the woman (mother of one of the warriors) to whom the hut belongs, sleeps with her younger children. At the other end of the hut, not screened off in any way, is the bed upon which the warriors and girls sleep. No warrior may ever sleep upon the married woman's bed, but the woman's husband can come down and visit her whenever he likes, and when he does so, no warriors or girls may sleep in the hut. Ordinarily, however, the woman's husband does not live at the *manyatta*, and she and her small children sleep on her bed at the one end of the hut, while the warriors sleep on the bed at the other end of the hut with the girls. No warrior ever sleeps in his own mother's hut, but always in one of the other huts if he has invited a girl to sleep the night with him. When, therefore, he has arranged for a girl to visit him at night he goes in the evening to one of the other huts and arranges to sleep on the young people's bed there. He then sends a message by the woman who owns the hut to tell the girl that he is sleeping there so that she may come to him. There is absolutely no objection to several men coming in this way to the same hut, and sleeping on the same big bed each accompanied by his girl. In fact, it is considered wrong for a warrior and a girl to have sexual intercourse unless there are also other couples sleeping on the same bed. Moreover, besides those men who have come to the hut and sent for their girls to join them there, there are usually several younger girls, daughters of the woman who owns the hut, sleeping on the bed too. These young girls, too young as yet to sleep with the men sexually, nevertheless, sleep on the same bed as the warriors and older girls, and thus grow up steeped in the customs of the *manyatta*.

It is exceptionally difficult for a European to understand all the full details and facts concerning native sex life, but the following facts have been noted and verified for the Masai. No girl may sleep with a man except she be absolutely nude, but on the other hand, although by tradition and by etiquette she may not refuse an invitation to sleep with a man (except for the two reasons already given above), she is not necessarily expected to allow him full sexual intercourse, and, in fact, often does not do so. Thus—strange as it may seem—Masai girls do sometimes go to their husbands as virgins in the physical sense of the word (*see* Marriage), although they may have slept with men in the *manyattas* countless times. Usually, however, Masai girls have no objection to full intercourse except during the first four or five days after each menstrual period (*see* Girlhood), for the Masai firmly believe that conception cannot occur unless intercourse takes place very soon after menstruation, and four to five days is considered an absolutely safe margin. Moreover, this belief seems to have a strong foundation in fact, and it thus raises a very interesting point for physiologists as to whether this is as true of primitive peoples as it

836 is of animals. It is apparently this fact which explains why there are so
892 few cases of uninitiated girls conceiving despite the Manyatta sexual organization.
561 My informants insist that cases of conception only occur when a girl has been persuaded by a man to have full intercourse just after her menstruation. It is quite easy for a girl to see to it that she does not have full intercourse if she does not want it, since there are always at least two other couples sleeping on the same bed, and there is also always a married woman in the same hut to see to it that no force is used by the men.

(For details of procedure should an uninitiated girl conceive, *see* Girlhood.)

836 *Permanent Lovers.*—Besides the casual day-to-day lovers described above,
561 a girl very often has a more permanent lover in the *manyatta* in which she lives, chosen from among the ranks of those who have been her casual lovers. The actual
836 choosing ceremony takes place in public, but the choice is usually made privately
584 beforehand. This permanent lover in some cases will eventually be the girl's
561 husband, but this is not usual, as nearly every Masai girl is betrothed during childhood (*see* Marriage), and usually girls are quite content to marry those to whom they were thus betrothed. Should a girl be unwilling to marry the man to whom she is betrothed she usually contrives to become pregnant by her "permanent lover" and to persuade him to marry her (*see* Girlhood).

836 The actual ceremony of selecting a "permanent lover" takes place as a public
561 affair. A group of the warriors, including the man, collect together and one of the man's friends then summons the girl and hands her a spear, and she is told to go and give it to the man she chooses as "permanent lover." Having thus been publicly accepted, the warrior from then on becomes responsible for supplying the girl with such ornaments and necklaces as she may need from time to time, and he also gives her a special necklace to be worn as a token. After this ceremony she continues as before to sleep with any of the warriors who may ask her to do so in the way detailed above (*see* Sex Life). Equally the man may sleep with any of the other girls, but the girl and her "permanent lover" can arrange to sleep together without adopting the usual formula and procedure.

561 *The Eunoto Ceremony.*—After nine years of Junior Warriorhood a big cere-
[484] mony called *Eunoto* takes place, at which all the members of a given group from the whole of the Masai country, north, south, east, and west, are required to be present. This ceremony marks their rise from Junior to Senior Warriorhood. During the whole of the nine years of Junior Warriorhood they have not been
[302] allowed to shave their heads at all, but their hair has been gradually tied and trained into a long pigtail at the back of the head, which is the sign of Junior Warriorhood. (The only exception to this rule of not shaving the head during Junior Warriorhood is in case of severe illness, when the head may be shaved if so desired.)

883 attached to the warriors to sleep with them. In fact, we may say that for the girls
836 sex life starts before puberty and continues (with no such period of sexual prohibition as the boys have during the novice stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that
[834] sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

841 *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refuse all invitations to sleep with men or boys. There is no restriction of work during the menstrual
[171] period as there is among some Bantu tribes, but a girl or woman must wash her hands before milking if she is menstruating.

842 *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special teaching about this, girls grow up with this knowledge and take care not to allow full intercourse during the few days immediately following menstruation. Occasionally, of course, a girl does allow sexual intercourse at this time, either because she is carried away by sexual desire, or because she deliberately wishes to conceive for some reason or another (*see* Warriorhood). In the former case she will try to bring about abortion.

847 *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she sends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortificant. This is the only method used.

848 *Penalty for Conception.*—If an uninitiated girl conceives and her condition
581 becomes known she must immediately be initiated. In the normal way (*see* below)
884 her initiation would take place at her mother's house and the necessary arrangements would be made by her father, but if she is to be initiated because she is with child the onus of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. Not only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one heifer and a quantity of beer to the girl's father, "because he has prevented the father

Kenya

Moreover, there will be no lack of married men willing to be the physical father of her children, since no married men may have intercourse with uninitiated girls, nor yet with their own wife or wives if with child. 585 837 843

Married women make a point of having intercourse immediately after menstruation in order to "get a child." All children born to a woman who is married are considered to be the children of her husband, no matter who their actual father may be. Owing to this system it may happen that by the time a man leaves the warrior stage and passes into the Elders' stage, and goes to live with his wife, he may find that she already has one or more children. 585 842 [561]

Normal Marriage (of a subsequent Wife).—In the case of a girl marrying a man who already has one or more wives, she simply goes to his village—where she has either already built a hut or had it built for her—as soon as the shaving ceremony is over after her initiation. She then lives with him in the normal way and he will probably be the physical father of her children, although not necessarily so, as she is permitted to have lovers if she wishes it, provided they are married men. 595 [837]

Forced Marriage.—It occasionally happens that the father of a man who is still in the warrior class decides for some reason or another that he wishes to have his son at home—wishes, in fact, that his son should leave the warrior stage before the age-group to which he belongs is due to move up to the Elders' stage en masse. In such a case he waits until the girl to whom his son is betrothed has been initiated and is ready for marriage (or even arranges for her initiation to be hastened) and then proceeds as follows. The marriage transaction having been completed and the girl's new hut built in the village, he sends for the girl and secludes her in the hut. He then arranges with some of the young men of the same age-group as his son to bring the youth to the village on some pretext or other. The usual pretext is that of going to the village to ask for a bullock for a meat feast (*see* Part IX). As soon as the village is reached these young men together with some older men seize the man and carry him forcibly to the girl's hut. The girl is alone in the hut; not even her mother may be present when the man is brought in. The two—man and girl—are forcibly held together so that their bodies touch. Once his body has touched hers (an initiated girl) in the presence of witnesses he cannot go back to the warrior group, and so has to remain and reconcile himself to premature married life with its restrictions. 585 561

Marriage of a Virgin.—There is a very curious custom connected with the marriage of a girl who is a virgin in the physical sense of the word, *i.e.* of a girl whose hymen has never been penetrated. Should a girl's husband find that his wife has come to him in this condition, he must send her back to her father's village the next morning carrying on her back a milk gourd without its stopper. This is a sign to her father that she went to her husband as a virgin, and her father must send her back to her husband with a gift in the form of a heifer as compensation to the husband. The husband may not himself perforate the hymen until this heifer has been received. 585

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

As stated above, *Ol Piron* means a firestick. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Ol Piron* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has considerable political as well as domestic importance. 561

Manyattas.—The *sirit* is the unit for a single *manyatta*, except when the whole age-group of a single area combine to form one *manyatta* for some ceremony, *e.g.* the *E-Unoto*. 561 361 648

For some years the policy of Government was directed towards suppressing the warrior system, and *manyattas* were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have *manyattas* provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what these were. The main political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 561 177 361

Nowadays the parents are somewhat unwilling that the girls should live in the *manyattas*, and so there are only a few of them to be seen there.

A *manyatta* usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey *tasiukiu* would perhaps best be spelt as two words *Tasioki iyook*. *Tasioki* is a second person singular imperative of a dative word (*see* Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Iyook* means "we" or "us." 836 [193] [114]

When a man has been accepted by a girl who has been so addressed he usually holds out his hand to her with the tips of his forefinger and thumb touching to form a circle. She is then supposed to break the circle so formed with her forefinger. This is regarded as making her acceptance binding. [201] [832]

It is a great disgrace for a warrior to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 842 154

The E-Unoto Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 561 884

/47 cont./

585 People gather in the vicinity of this kraal in the cool morning hours under a large shade tree, to which each of the participants brings something edible and potable, a sheep, a goat, a pot of honey, a calabash of milk or honey beer. The children belonging to the family of the bride and to her relatives drive up a head of cattle belonging to the bride's father. The head of cattle is immediately slaughtered to feed the guests. Bride and groom are festively adorned, that is, [302] above all /48/ rubbed on the upper body and head with a paint made out of beef suet and red ocher. Those present sit in a large circle, one half of which is formed by the bridegroom with the men and the other by the bride with the women and children, so that the bride [753] and groom are opposite each other. Whereas the guests partake heartily of the foods, the bridal couple may not take anything because they would become sick from it, would get a rash around their mouths, but rather they must bear patiently a flood of good teachings and advice. After finishing the banquet and the dance following it, which does not come to an end until shortly before midnight, everyone retires; the bride goes with her mother into the latter's hut, the bridegroom together with other warriors into another one. On the following day people again assemble for dancing. On this day only two sheep are slaughtered; the bridegroom brings one, his father-in-law gives the other. Women and girls rub their bodies and skin aprons with the fat of the animals. After the meal the bride is handed over to the bridegroom and the two move into their new hut, to which the man's mother brings a small child from the neighborhood. The man takes the child from her and puts it on the lap of his wife, who gives the [842] child milk to drink out of a gourd bottle. This ceremony is supposed not only to express the wish for numerous progeny, but it is also believed that it has the magic power to bring them forth.

In some regions it is customary for married people to remain together immediately after the wedding, and the wife may not leave the hut either on the wedding day or for the following five days. In others the wife goes for a time, 20 days to two months, to her mother or mother-in-law, or, if her husband already has several wives, to his principal wife, in order to be instructed in the work of the household and, with the help of her hostess, to build a hut of

/50 cont./

843 observed, since as a rule a new pregnancy ends the nursing period.
[853] The pregnant woman removes the ornaments that she previously
[183] wore, in order -- as the Masai explain this custom -- not to entice men. During the first five months of pregnancy the woman lives as usual with respect to food and drink. Then she is given a broth of
[262] lung, liver, and kidneys cooked with a bitter-tasting tree bark (2)

2. From Albizzia anthelmintica.

called ol mokotan, and milk, only the latter during the last month. Through this the woman is supposed to become as exceedingly thin as possible, so that the birth will proceed easier. She may not eat the meat of fallen livestock. The husband during this time need not subject himself to any special diet or special acts, but he may not go to war, for it is believed that he would die on the way. Shortly before the delivery the husband may not leave the kraal or its immediate
[732] vicinity. If he should tease a crippled person or mock him because of his infirmity, the awaited child would come into the world af-
844 flicted with the same defect. /51/ For a successful delivery the
[782] pregnant woman prays: 'Ng ai ndaba 'ndubuggu en tiamassi (1)

1. Or en diamassi.

= "God let come out healthy -- the monster," as the unborn child is called. The woman gives birth in her hut, which on this day may be entered only by women and girls. A midwife (eh gaitoijoni, h gaitoijok) provides or performs the necessary assistance. If the newborn child is a boy, the midwife calls out that blood should be drawn from an ox as food for the woman in childbed: in the other case, from a heifer. Through this the father also learns the sex of the new-
[782] born child. During the birth process the women who are in the hut or standing around it cry to God for help and assistance in shrill, often
845 plaintive voices. The birth of a boy is more desired than that of a
[842] girl, but the greatest joy prevails at the birth of twins, especially if both are boys. In that case the woman often keeps only the first-born child with her, while the second one is nursed by another suitable

/61 cont./

881 question for the next circumcision period. These choose for this, as the site of the festival, a recently built family kraal, which is [292] then designated as eng aŋ 'n aibage 'l aijok. Decked out with a [535] costume in imitation of the warriors, but without weapons and, in- [533] stead, a long stick in the right hand, the boys amuse themselves with dance and song in the vicinity of the kraal. When they crowd into the kraal after the first dance, in order to moisten their parched throats with milk, they are /62/ sprinkled with honey beer by an old man standing at the entrance and congratulated with the words: en dobollo, en daret ijōk, en dabo loscho, that is, roughly: may you become ever more numerous, make us rich, and bring prosperity to the country. During the festival the boys choose a spokesman or speaker (ol aigwenani) from their midst, whose task is to train them in comradeship and corps spirit. When the festival has lasted two days, the boys move into the various neighboring areas in order to 881 repeat it there. In this way an eŋ gebāta often lasts a month. It is also to be mentioned that very many women appear at these festi- • 842 vals, and especially all who have up to then remained barren. The former appear in part as mothers of the celebrating boys, in part as companions of the barren ones, and the latter for their part come in order to have themselves pelted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a con- 881 viction prevailing generally among the Masai. In each of the following four to five circumcisionless years ('l ari otudunyeki 'l aijok) a similar festival is celebrated. It should be mentioned further that the [231] cattle whose meat is used to feed the participants at the eŋ gebāta festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival:

[301] A few weeks beforehand one already sees the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the [302] warriors. On the day before the operation the boy's head is shaved, and the hair is thrown under the bed of the children in the maternal [292] hut. The boy takes off his skin cape and ornaments and dresses himself

[Warrior Kraal]

/84 cont./

836 701 Every warrior has his favorite girl (na sandja) (1).

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover os sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

853 bring back the milk secretion by a copious drinking of liquid sheep fat. Meanwhile the child is nourished with cow's milk.

757 For pains in the uterus (eñ gusset) and in the uterine ligaments (es sabôl, es sābô) the woman drinks a root decoction of ol mañgulai (Grewia villosa).

847 824 [237] To induce an abortion, the one concerned drinks a decoction of dried goat manure or a strong docoction of os segi (Cordia quarensis) or ol durgó root. During the subsequent two or three days of convalescence she takes a weak decoction of ol mokotan bark or one of the bark of ol oilale (Colubrina asiatica).

163 Concerning fertility, the relationship of the sexes, and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 17. The 87 old women questioned had given birth to 548 children all together, which gives an average of 6.3 confinements for one woman. Of these, 231, therefore 42.2 per cent, were boys, 371, therefore [165] 57.8 per cent, girls. Before their circumcision 38.7 per cent of the children died, including the stillbirths.

845 842 It should also be mentioned that the realization of a twin pregnancy is regarded as having arisen through one conception.

/209 cont./

796 782 participants eats a small piece of the meat, after he has roasted it in the ashes. Furthermore he is given a strip of the skin, from which [751] he then fashions amulet rings, one for himself, the others for his [237] relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the participants constantly sing:

[539]

Hai narok, oho, Hai kindera ije, oh,
Hai narok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; afdog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 782 233 On the following day the women carry fresh cattle dung to the ashes and knead a mash from it, into which is mixed a medicine that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor l oh gischu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

796 782 842 791 Another supplication feast is celebrated only by the married women in order to implore God to give them children. It is called iruga 'Ng ai ol adjo, i.e., may God hear the word. In or near the kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

/209 cont./

796 782 [842] [539] In the songs the following prayer is constantly repeated: 'Ng ai atasaia, 'j' oschiage aomon, kiamon ag' ije kiamon eñ gera, eñ golobi en aischo, i.e., God, I implore you always: I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the es sobiaĩn days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dogóm, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of eñ gaitetojai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oiboni, while they say the /210/ prayer: 'Ng ai jo ijok eñ gischon, jo ijok ñ gischu, jo ijok eñ gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the joint supplication feast always precedes it on the first day of the month.

[272] [237] [415] [824] [539]

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (eñ gepa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboron believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboron kraals are not rare.

775 /210 cont./
825 Allegedly they never bite the El kiboron people; on the other hand
826 the latter often use them as frightening devices against both Masai
613 and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Ngnaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Ngnaunir is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise "Ngnaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (es sétán), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and 789 the execution of special gestures. The aforementioned amulet ring [751] (ol geretti) protects one against the effect of magic made by another [754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The [842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' eń gebāta feast. The eń goguroi is tied around the ankle and protects one from ailments of the legs. The ol durgeĭ [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorré protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

IV.

000 The future of the Masai People. -- Weighing the effect of the people-preserving and people-destroying factors. -- Polygamy. -- Nutrition. -- Fertility. -- Child mortality. -- Free love. -- Organization. -- Wars. -- Epidemics. -- National pride. -- Clash of the culture of the Masai with that of the Europeans. -- The incompatability of the two hurts the Masai. -- Harmful consequences of the impoverishment. -- Difficulty of becoming sedentary.

121 In order to make a prognosis about the future of the Masai people it seems necessary, first of all, to weigh the people-preserving and people-destroying factors established in the people, in its character and customs, and then to observe the phenomena that appear when the Masai meet the Europeans. We have many examples of the fact 182 that polygamy does not promote an increase in the population to the 595 extent that monogamy does as a rule. As the reason for this phenomenon one finds an accumulation of wives in the hands of the wealthy, and, as a consequence of that, celibacy for lack of women among very many of the less well-to-do and among the poor. It is obvious that under such circumstances polygamy leaves very many women [162] neglected. But it is different among the Masai, for here there is such a surplus of women -- perhaps in part again as a result of polygamy -- that no man remains celibate, in fact the possession of only one woman is an exception. Hand in hand with this goes the not so [735] unequal distribution of property; in practice there are scarcely any poor people. Another reason to which /345/ the decline in population among many polygamous peoples is attributed is that polygamous marriages as a rule are relatively poorer in children then monogamous [842] ones. This objection is not to be taken into consideration here either, for we have seen that the fertility of the Masai women is very great. Yet, in order fully to consider the polygamy of the Masai in its economic effect, we must observe the milieu in which it exists. The polygamous household of the Masai may be compared to a stock company, to which the property, theoretically belonging solely to the house father belongs in practice. The house father is the chief

/349 cont./

178 that are started with as a rule and which one therefore finds in all the
241 settlements. Yet despite the ease of production of the field crops,
the transition to agriculture nevertheless is taking place in a way
178 that is reducing the population in extraordinary fashion. First of all,
182 the acclimatization process slowly being accomplished demands a
164 great sacrifice of human lives. The Masai, little afflicted with
165 fever in the dry steppes, suffers with it quite seriously in the moist
regions in which mosquitoes are permanently at home. Thus on two
occasions in the same new settlement I found all the adults and many
children sick with fever. Another one had just been abandoned by
its inhabitants, leaving the sick behind. The ones left behind,
principally men and boys, were badly reduced by fever and, in
addition, suffered to a great extent from virulent leg ulcers, whose
great extent -- in many cases they covered the entire lower leg,
from knee to ankle -- probably is to be traced back to a general
weakening of the body by fever and lack of food; for such ulcers
are not common among nomadic Masai, and, where they occur,
/350/ they remain smaller and show a tendency to heal rapidly.
Other illnesses arise from the unfamiliar diet. The rapid transition
[262] from an almost pure meat diet to an almost pure vegetable diet
makes demands on the stomach and intestines that a body weakened
by fever is seldom equal to. Sickness and death from this cause
are frequent and are increased further by the consumption of bad
water. Thus, more than half the people in one settlement com-
plained of painful diarrhea and bloody stools. All these acclimati-
• [842] zation illnesses seem also to manifest their effect in decreased
[163] fertility of the women and increased child mortality. I was repeat-
edly struck by the small number of sucklings (two-year suckling
period) and older children. Thus early in 1902 in Ngaruka, between
Lake Manyara and Lake Natron, among a number of about 50 women,
I found only twelve children, three of them babies. According to
the statements of the parents, very many children had died of various
ailments, especially fever, stomach and intestinal affections, several
178 also had perished in Masai attacks. For the Masai who are becoming
619 sedentary, the ones still living among the "people" as nomads are
721 a scourge that scarcely falls short of the illnesses just mentioned in

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

133 Mau is the source of all the rivers watering the western half
[137] of Masailand, Kipsigis and part of the Rift Valley. The birthplace of innumerable streams, it is, in theory, protected by its status as a forest reserve.

185 Looking out from the small yellow aircraft expertly handled
311 by June Wright, one of the best commercial pilots in East Africa, one could quickly see how different theory was from practice, here as elsewhere. In a forest reserve no one is allowed to fell trees, cultivate, start fires or graze livestock. In less than half an hour, I counted seventeen active fires and saw the shambles created by innumerable others. Whole ridgebacks of the mountain, sticking up like black spines, were as bare as slag-heaps and already runnelled and creased by gully erosion. Older fires were still smoking in some of these devastated areas; one could see the forest being eaten into like a great fur pelt attacked by moths.

As sure as fate, one day there will be no more water for cattle in the streams below. 'God is punishing us,' will say the Masai: but it will not be God, it will be themselves. The
[233] streams are already shrinking and the Masai are driving their herds farther into the hills to find grazing. They cannot take cattle into forest and so they burn a way in. They are creeping upwards, spreading destruction as they go in order to escape the consequences of destruction they have already caused.

[222] Other fires are started by honey-hunters who burn down trees to smoke out the bees. Often, in the forest, you can see blackened hollow cedars and olives killed by fires tucked into the roots. If the foliage is dry and the wind right, the fire will spread and get out of hand.

563 And then there are 'acceptees': a clumsy term given to men of other tribes who are settling in Masailand, family by family, with the permission of Masai elders. They are tenants: but it is very unlikely that they will ever go.

[167] In South Nyanza and in Kipsigis it is reckoned that upwards of two thousand families a year are crossing the southern border into Masailand and Tanganyika. In recent years a
[582] good many Masai have married Kikuyu or Kamba wives
[842] because so many of their own women are sterile; at one time there was quite a trade in Kikuyu girl-children, exchanged for
Cattle.

Food.

Amongst the Masai the principal food of the old men, the women, and the children is milk. 262

The warriors alone drive bullocks into the forest, and slaughter them there: at other times they go to the married people's kraals and drink milk, but they never remain for two months together without slaughtering.

Whenever the old men, the women, and the boys are able to do so, they likewise eat meat. They also eat an ox if it dies a natural death [1], or if it is bitten by a snake, or if a beast of prey has killed it.

The Masai elders, however, do not slaughter their cattle without good cause, and a man who is very fond of meat is called a Dorobo. [186]

Whenever a woman gives birth to a child, a bullock is slaughtered, and she is given the fat. [846]

A pregnant woman is not given good food. When she wants meat, she is given bones or lean scraps; and when she wants milk, water is mixed with it. [843]

The Masai are also very fond of blood. They tie a leather ligature round the neck of a beast and pierce a vein with an arrow, the shaft of which has been blocked. When the blood gushes forth, they catch it [415]

[1] The Shiluk and other Nilotic tribes also eat cattle which have died a natural death (Gessi, *Seven Years in the Soudan*, p. 32, &c.). [121] [113]

83 sweetheart (*e-ongie*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'ittoo* and *en-e-'ittoo*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 The payment of the bridal price authorises a Masai to reckon the children
583 which his wives bear as his own; it further gives him a full measure of control
837 over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised,
[834 sexual communism or something very like it prevails between all the men of one
835] age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by the elders, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his cows are slaughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two cows, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 If a man unintentionally commits incest—and it is quite conceivable that a
684 man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*o-ur ong-ongil*).

●843 A man must abstain from having sexual intercourse with his wife as soon as
833 she becomes pregnant, and he may not again have connection with her until the
[856] child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of
682 a man having intercourse with a pregnant woman, and thereby causing her to
684 abort, he must submit to a punishment which is called *ol-kiskerete*. All the women of the neighbourhood collect together and, having stripped, seize the guilty
833 person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 Other occasions when the sexes may not have sexual intercourse are when
278

[1] For the rules regarding hospitality see *The Masai*, p. 307. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 15 years. See *The Masai*, p. 303.

Kenya

However, there will be no lack of married men willing to be the physical father of her children, since no married men may have intercourse with uninitiated girls, nor yet with their own wife or wives if with child.

Married women make a point of having intercourse immediately after menstruation in order to "get a child." All children born to a woman who is married are considered to be the children of her husband, no matter who their actual father may be. Owing to this system it may happen that by the time a man leaves the warrior stage and passes into the Elders' stage, and goes to live with his wife, he may find that she already has one or more children.

Normal Marriage (of a subsequent Wife).—In the case of a girl marrying a man who already has one or more wives, she simply goes to his village—where she has either already built a hut or had it built for her—as soon as the shaving ceremony is over after her initiation. She then lives with him in the normal way and he will probably be the physical father of her children, although not necessarily so, as she is permitted to have lovers if she wishes it, provided they are married men.

Forced Marriage.—It occasionally happens that the father of a man who is still in the warrior class decides for some reason or another that he wishes to have his son at home—wishes, in fact, that his son should leave the warrior stage before the age-group to which he belongs is due to move up to the Elders' stage en masse. In such a case he waits until the girl to whom his son is betrothed has been initiated and is ready for marriage (or even arranges for her initiation to be hastened) and then proceeds as follows. The marriage transaction having been completed and the girl's new hut built in the village, he sends for the girl and secludes her in the hut. He then arranges with some of the young men of the same age-group as his son to bring the youth to the village on some pretext or other. The usual pretext is that of going to the village to ask for a bullock for a meat feast (see Part II). As soon as the village is reached these young men together with some older men seize the man and carry him forcibly to the girl's hut. The girl is alone in the hut; not even her mother may be present when the man is brought in. The two—man and girl—are forcibly held together so that their bodies touch. Once his body has touched hers (an initiated girl) in the presence of witnesses he cannot go back to the warrior group, and so has to remain and reconcile himself to premature married life with its restrictions.

Marriage of a Virgin.—There is a very curious custom connected with the marriage of a girl who is a virgin in the physical sense of the word, *i.e.* of a girl whose hymen has never been penetrated. Should a girl's husband find that his wife has come to him in this condition, he must send her back to her father's village the next morning carrying on her back a milk gourd without its stopper. This is a sign to her father that she went to her husband as a virgin, and her father must send her back to her husband with a gift in the form of a heifer as compensation to the husband. The husband may not himself perforate the hymen until this heifer has been received.

his father's house or in his own manyatta. But it seems that a ceremony is performed which releases the husband from the prohibition on warriors having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers; she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 587 948

Polygyny

A man may have as many wives as he can pay for: one of Hollis's texts says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and four are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, *enk-ap*, the first wife on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. 545

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own *al-ap*) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A warrior is not supposed to have intercourse with a married woman, and a married woman may not [illegible] with an uninitiated boy. 937 684

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 586

Adoption

In the old days, children captured in war were often adopted; and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, *e.g.*, a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, *enk-ainyoni*. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the use of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Hollis says till the time when it cuts the two middle incisors both, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. 944 946 943 933 945

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother 553 552

M 10 233 (ii) *The Masai.*

The Masai are a pastoral tribe whose sole occupation is the tending of large herds of cattle, sheep and goats. It has been estimated that they have about 25 head of cattle, and twice as many sheep and goats, per head of the population.

M 262 261 [363] The staple articles of diet are meat, milk, and blood. The blood is drawn from the living animal by puncture of the jugular vein with an arrow. Various roots and barks are used to make infusions which are used either with boiled meat or with milk. The men, while in the "moran," or warrior class, subsist practically entirely on these articles of diet. The rest of the population, in addition to these four items, which form the main part of their food, eat also some bananas, beans, millet, arrowroot, maize, sugar and honey, as these are available. The use of maize, which was introduced only a few years ago, is increasing.

M [177]

For the greater part of the year there is no scarcity of meat, blood and milk, but in periods of severe drought, when, in spite of the large herds, the milk supply is inadequate, the consumption of these vegetable foods is increased, and even the "moran" may be compelled to supplement their meat and milk diet.

M [484] [843] [146] Berries are eaten by the warriors when on safari, *i.e.*, on hunting or fighting expeditions. It appears also to be customary to send the pregnant women into the bush to eat berries. The berries would make an insignificant contribution to the main constituents of the diet, but it is probable that they are of considerable importance as an antiscorbutic addition.

M [184] One section of the tribe, the Loitokitok, have adopted a frankly mixed diet. It is of interest that pica among the Masai is confined to this section, who use edible earths from various sources with their vegetable foods.

(*b*) Chemical Composition of Native Foodstuffs, Edible Earths, and Mineral Waters.

Ka M K 146 The results of the chemical analysis of 153 samples of substances used in the dietary of the two tribes are given in Appendix I. Certain points of interest are discussed below.

(i) *Foodstuffs.*

In the following table a comparison is made between the analyses of the chief Kenya foodstuffs and analyses of similar products grown in other regions, probably in Europe or America, as quoted by Sherman (1926). All the figures are given as grams per 100 grams dry matter.

It has been noted, however, that the tendency throughout the reserve is for men to eat much less of the green leaves than the women do. It is stated that in some districts they eat none. A reason given for this, in a reply to the questionnaire from one of the native chiefs, is that " . . . such food prevented them from being swift of foot if defeated in battle by the Masai."

Estimations of manganese were made in some foodstuffs (Appendix I, Table II). The level in white millet and maize was found to be similar to that found in these foods grown elsewhere, but the manganese content of Kenya green leaves was found to be very much higher than that of edible leaves in this country. The following table shows the nature of the differences found (Richards, 1930) :—

Manganese in mgms. per 100 gms. Dry Matter.

Kenya Samples.		*Home-grown Samples.*	
Red millet	40·19	Oatmeal	6·9
White millet	2·55	Barley	2·01
Green leaves	8·93 to 51·31	Cabbage	1·50
Average	30·0	Lettuce	13·30

The manganese content of plant ash used as a salt substitute was also found to be very high, the values for two samples being 418 mg. and 352 mg. per 100 gms.

853

(ii) *Salt Substitutes and Mineral Waters.*

The ashes of water plants (Appendix I, Table IV) largely used as salt substitutes by women, especially during pregnancy and lactation, contain significant amounts of calcium and sodium. The average calcium content of seven samples, procured at native markets or in the villages, is 3·4 per cent., and the average sodium content 7·3 per cent. One of the samples analysed stands out from all the others by reason of its high calcium content, which is 10·60 per cent. as compared with values ranging from 1·0 to 1·5 per cent. for the others. This sample was bought at Wandiga's market, and the ash from this market, and that from neighbouring swamps on the Kagumo River, which is probably identical with it, appears to be more in demand than any of the others mentioned in replies to the questionnaire.

/50 cont./

837 /footnote 1 cont./ husbands. Babies to whom a woman has given birth from thus living with another man belong to the husband, even though they also call their genitor father.

[851]

847 They abort an immature fetus when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a potion are used, which are said to be innoxious during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

833 They are accustomed to having intercourse lying on their sides, the woman's upper knee placed over the man's loins. They do not customarily cohabit except at night. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would retain nothing but water.

[864] Boys and girls already begin to practice cohabitation at the age of eight to ten.

514 It is considered extremely shameless to break wind in the presence of women.

V.

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Confinement. -- Festivities in connection with the birth. -- Twins. -- Deformed child. -- Killing newborn children. -- Behavior of the woman in childbed. -- The newborn child. -- Childhood. -- Children's games.

843 853 183 As soon as the woman feels pregnant, the spouses separate until after the nursing period, which lasts approximately 1 1/2 to 2 years. Another man may not touch the woman during this period, any more than her husband. This stipulation, however, seems to be little

/50 cont./

843 observed, since as a rule a new pregnancy ends the nursing period.
[853] The pregnant woman removes the ornaments that she previously
[183] wore, in order -- as the Masai explain this custom -- not to entice men. During the first five months of pregnancy the woman lives as usual with respect to food and drink. Then she is given a broth of
[262] lung, liver, and kidneys cooked with a bitter-tasting tree bark (2)

2. From Albizzia anthelmintica.

called ol mokotan, and milk, only the latter during the last month. Through this the woman is supposed to become as exceedingly thin as possible, so that the birth will proceed easier. She may not eat the meat of fallen livestock. The husband during this time need not subject himself to any special diet or special acts, but he may not go to war, for it is believed that he would die on the way. Shortly before the delivery the husband may not leave the kraal or its immediate
[732] vicinity. If he should tease a crippled person or mock him because of his infirmity, the awaited child would come into the world af-
844 flicted with the same defect. /51/ For a successful delivery the
[782] pregnant woman prays: 'Ng ai ndaba 'ndubuggu en tiamassi (1)

1. Or en diamassi.

= "God let come out healthy -- the monster," as the unborn child is called. The woman gives birth in her hut, which on this day may be entered only by women and girls. A midwife (eh gaitoijoni, h gaitoijok) provides or performs the necessary assistance. If the newborn child is a boy, the midwife calls out that blood should be drawn from an ox as food for the woman in childbed; in the other case, from a heifer. Through this the father also learns the sex of the newborn child. During the birth process the women who are in the hut
[782] or standing around it cry to God for help and assistance in shrill, often
845 plaintive voices. The birth of a boy is more desired than that of a
[842] girl, but the greatest joy prevails at the birth of twins, especially if both are boys. In that case the woman often keeps only the first-born child with her, while the second one is nursed by another suitable

/51 cont./

845 wife of her husband; often, however, she also nurses both herself.
[301] Soon after birth the twins receive a leather cord trimmed with cowrie shells hung around their necks, an expression of paternal pride, so that everyone will immediately recognize the child as belonging to
[203] a pair of twins. To be sure, the Masai living in a circle of two to three days' march are well acquainted with each other and are immediately informed of every bit of news through the constant intercourse between the individual kraals. "Every Masai coming from farther away, however, upon seeing a child unknown to him, always asks first of all: "Who is his father?" The birth of triplets is said not to occur. After the birth of a deformed or dead child, the young mother is beaten by the women of the kraal and the father overwhelmed with abuse from the other men. The woman is punished
[843] because it is assumed that she practiced sexual intercourse in far ad-
[784] vanced pregnancy and through that injured the fetus. But then an unnatural birth or a stillbirth is also regarded as a punishment of God for a sin, especially as one directed against a relative, a fellow lineage or tribal member, be it through inflicting an injury or
847 neglecting a bond of friendship or love. They admit the killing of newborn children only in case the child comes into the world very frail or was conceived out of wedlock by an old, sick man. There can be no doubt, however, but that they also kill deformed children immediately after birth, for one never sees cripples among them.

844 During the birth process the women of the neighborhood have streamed together in front of the hut of the woman in childbed, in order to bring her milk or also flour. First of all the other wives of
[626] her husband hasten there, as well as the women of her kin, her lineage or tribe. Good /52/ breeding demands it of them and they comply in order not to be subjected to the mockery and abusive language of the others. When the child is brought into the world, the women of the kraal sing and dance, in order to thank 'Ng ai for the successful birth, for which they receive an ox from the father of the newborn child, which they immediately consume outside the kraal. The next day a second ox is slaughtered, at the consumption of which
000 any guest is welcome. In the lineage of the El kiborōn every newborn

Midwifery and Women's Ailments

759 Midwifery is in the hands of older women, who, as ñ gaitoijok (sing. eñ gaitoijoni), professionally practice the calling of midwives and have at their command a surprisingly accurate anatomical knowledge of the body parts in question. It seems that only in
• 843 exceptional cases are they not called upon at a birth. At the beginning of the last month of pregnancy the midwife examines the pregnant woman several times, in order to determine by palpation of the abdomen the position of the child. The head position is regarded as the most favorable for the birth; thus, if the woman doing the examining finds another one, she attempts to change it to the desired one by means of a massage.

844 As soon as the first labor pains begin, the midwife, who lives either in the same kraal or in one nearby, is called in. She finds the woman in labor, who, incidentally, is not regarded as unclean, on the bed in her hut in a squatting, sitting, or lying position. With a normal birth the assisting woman remains in attendance without performing any kind of superstitious or irrelevant manipulations. On the other hand, if it proves necessary to bring about an intensifying of the labor-pain activity, the midwife, with the help of a few women, first leads the woman in labor around for a few steps and, if the desired result is not obtained in this way, further help is given by means of a light massage. Only if these remedies prove insufficiently effective does one attempt the last one: The woman giving birth is /197/ slowly lifted by her feet by several women until her body hangs vertically and the crown of her head touches the ground, whereupon the midwife massages her abdomen in the direction of the navel.

The use of internal medicine to promote labor-pain activity is rare; a mixture consisting of liquid sheep fat and a decoction of os segi root (Cordia quarensis Gürke) is regarded as effective.

The midwives questioned regard the undertaking of turnings through insertion of the hand, in analogy to the birth assistance given livestock,

[186]

1. That circumcision among the Israelites -- as is assumed -- attained religious significance only during the Exile is refuted, it seems to me, by the use of the stone knife in earliest times.

as the Bible often designates it.

Circumcision certainly does not owe its origin to considerations of cleanliness -- as one so often hears -- since the desire for cleanliness could be satisfied more simply in other ways and without an operation not always entirely safe. Furthermore, we also find this custom preferred precisely among those peoples who certainly do not attach any particular value to cleanliness. Moreover, however, I also doubt that /332/ the utility of circumcision in the matter of cleanliness is actually so great, for among the only very scantily clad primitive peoples the part in question is so much more exposed to the effect of dust, etc. and injury by thorns, spiny leaves, blossoms, and grasses than it would be otherwise.

[581] The circumcision of girls among primitive peoples may also be interpreted as a preparation for marriage. Among the Masai, besides the point in time at which it is undertaken, the way of life of the girls before and after the operation argues in favor of this. Clitoride excisa libido diminuitur et cohabitandi cupiditas retinetur. /Clitoridean excision lessens desire and, in cohabiting, restrains passion./ This [843] has, in the opinion of the people, great advantages for the growing [853] and suckling child, as is also shown by the continence rules of the Masai during pregnancy and the suckling period.

As we know, the Bible knows of no circumcision of the girls. That such was customary in Egypt, however, even during the oldest Biblical period, is taught by the 15th of the British papyri, in which there is mention of the circumcision of the girl Tatemi, the daughter of Nefori of Memphis. Here, too, the girls were circumcised at the age of puberty (1).

417. o' rikáru (Cynodon dactylon Pers.) is a good fodder grass.

418. o' riroi, also called o' riroi l om bā (2)

2. Eulophia Shupangae Krzl. was also called this.

(Gladiolus nov. spec.). The juice obtained by chewing the bulb serves as glue to fasten the feathering on the arrow.

419. o' ropande (Commiphora spec.). The extract or decoction of a piece of bark the size of two or three hand-palms, mixed with meat broth, is taken as a remedy for abdominal pains. Since its effect is considerably milder than that of similar remedies, it is preferred by pregnant women.

701 the principle was that the meat and blood strengthened
[826] the warriors for fighting. We periodically came upon
[252] moran cooking fresh meat. It was usually goat or sheep, although occasionally bovine, and they cooked it either by skewering pieces on green limbs which they held over the fire, or by placing the strips of meat on a wooden
[857] grill above the fire. Youngish children usually
701 accompanied the moran. Gower (1948b:79) notes that in
562 Tanganyika Masailand:

> At an olpul a few moran (warriors) will go into the bush and slaughter a bullock or goats. They take with them a few uncircumcised boys and girls. They camp in the bush for any period from 10 to 30 days, depending on how many bullocks they have to slaughter. For the first few days they eat the meat roasted and cooked; thereafter they subsist on soup. The Masai consider that this diet gives considerable strength.

We never observed moran cooking meat far out in the bush. Usually these feasts were close to a boma.

We were told that eland and buffalo were considered close enough to cows to be proper food for Masai and this was also postulated by Grzimek and Grzimek (1960a)
562 and described by Huntingford (1953:109). The women
[843] apparently could eat game meat, especially gazelles, during pregnancy. From the reception of the meat we brought to bomas, we believe that in addition to women and children elders and a few moran will gladly

Songs.

A prayer to God[1]. 782 844

Masai women do as follows when one of their number gives birth to a child.

They collect together and take milk to the mother; they then slaughter a sheep, which is called, The purifier of the hut, or simply The purifier.

The women slaughter the animal by themselves, and eat all the meat.

No man may approach the spot where the animal is slaughtered, for it is considered unlawful.

When the women have finished their meal, they stand up and sing the following song: [539]

[1] Masai women often pray twice daily. Men and children usually only pray in time of drought, or when a cattle plague is raging.

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 175 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together in kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the boughs. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 844 [352] 844 342 [237] [361] [364] 844 [351]

6: Thomson K-3 (1883-1884)1887

844 the hut were gathered together the gossips of the kraal, mingling, so far as space permitted, with calves and goats. [845] A number of large calabashes lay in one corner, and a coarsely-made earthen cooking-pot in another. Fleas in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which pertinaciously would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on the part of the mother, who heard with deep pleasure that her [842] offspring was a boy. Girls are sadly at a discount among the Masai. They would always prefer to have boys, but happily nature sees ahead a little, and takes care that a fair

[133] [342]

MASAI KRAAL, DONYO LONGONOT IN DISTANCE.

supply of girls is provided. As there is no registrar or birth column, I am totally unable to state when our hero first saw 846 the light. That, however, is a small matter. No particular 852 ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly ensconced on her back beneath the bullock's hide which formed the mother's garment.

855 Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew apace. Getting above mother's milk, he was soon exercising his incipient teeth on a huge chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

PREFACE.

114 In the past very little detailed work on the social life of the Masai has been attempted,
115 since such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Masai language sufficiently fluently to make such an investigation in that language.

Although I cannot claim any knowledge of the language of the Masai, I have been
[122] fortunate enough to become friendly with four Masai who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn something from them about their customs.

These notes are of necessity brief and full of lacunæ, since I avoided asking direct
[124] leading questions, though tempted to do so, and also because they do not include information unless it was obtained from or corroborated by more than one informant.

The Masai from whom this information was obtained came from that part
[101] of the Masai Reserve which lies to the west of the Mau Escarpment, and I was not able to find out whether these customs prevailed among the whole of the Masai group.

My two principal informants were an old woman, past child-bearing, and her married son, aged about 35 (I have unfortunately lost the paper with their names).
[648] They were insistent that most of these customs have been slightly modified since
[128] government control has been set up, but I have, notwithstanding, written mainly in the present tense.

PART I.—CHILDHOOD.

844 *Birth.*—Among the Masai, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she assumes a stooping position supported by other women, as the first child is considered more difficult to deliver; otherwise a woman giving birth to a child lies upon the bed. The acting midwife cuts the cord with a special instrument,[1] and both the woman and new-born child are washed with warm water. The placenta is carried out and thrown down in the cattle yard, but is not buried. As soon as the child is born its sex is ascertained in order that an animal may be bled to supply blood for the mother to drink. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood *see* Part IX.) From the day of
[846] birth onwards many sheep and goats are killed to supply meat and fat for the mother in order that the child may grow up strong, but these animals have no special significance, and are not sacrificial or for purification purposes.

553 *Naming Ceremony.*—Children are not named until they can run about, and unlike
[171] some other East African tribes, the child does not inherit any name from any PARTICULAR RELATION.

[1] There is some mystery attaching to the instrument used, and I am not sure what it is.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

his father's home or in his own *manyata*. But it seems that a ceremony is performed which releases the husband from the prohibition on warriors having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers; she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 837 848

Polygyny

A man may have as many wives as he can pay for: one of Hollis's texts says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and over are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, *esh-ay*, the first wife on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. 595

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own *ol-ayi*) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A warrior is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uncircumcised boy. 837 684

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 586

Adoption

In the old days, children captured in war were often adopted; and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, *esh-aiyoioni*. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Hollis says till the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. 844 846 843 833 845

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother 553 852

D 197 /15 cont./
the El asiti also have their own idiom, which will be briefly discussed at a later place.

M 197 802 184 D 197 802 D M 771 304 619 [197] D M 174 [844] [176] D M 614 613 D M 128

Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Asá and El asiti have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tatoga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the Il aiser, the El mulelyan, and the El meiganna, each of which is made up of a number of lineages, and every Asá, as well as every Ol kuafi and Ol masani, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire people; the showing of individual differences that have developed among the Wandorobo in the course of time and under the influence of changed conditions will be reserved for the third part.

Every tribe (ol gishomi) is divided, as has already been mentioned, into a number of lineages (ol gelata, el gelat). Among these, in turn, one distinguishes principal lineages (ol gelata kituk)

/50 cont./

843 observed, since as a rule a new pregnancy ends the nursing period.
[853] The pregnant woman removes the ornaments that she previously
[853] wore, in order -- as the Masai explain this custom -- not to entice men. During the first five months of pregnancy the woman lives as usual with respect to food and drink. Then she is given a broth of
[262] lung, liver, and kidneys cooked with a bitter-tasting tree bark (2)

2. From Albizzia anthelmintica.

called ol mukuna, and milk, only the latter during the last month. Though this the woman is supposed to become as exceedingly thin as possible, so that the birth will proceed easier. She may not eat the meat of fallen livestock. The husband during this time need not subject himself to any special diet or special acts, but he may not go to war, for it is believed that he would die on the way. Shortly before the delivery the husband may not leave the kraal or its immediate
[732] vicinity. If he should tease a crippled person or mock him because of his infirmity, the awaited child would come into the world af-
• 844 fliced with the same defect. /31/ For a successful delivery the
[782] pregnant woman prays 'Ng ai nikiky 'ndubuggie en tiakuani (1)

1. Or en diamani.

• "God let come out healthy -- the monster," as the unborn child is called. The woman gives birth in her hut, which on this day may be entered only by women and girls. A midwife (sh gainijani, f gainijak) provides or performs the necessary assistance. If the newborn child is a boy, the midwife calls out that blood should be drawn from an ox as food for the women in childbed; in the other case, from a heifer. Through this the father also learns the sex of the new-
[782] born child. During the birth process the women who are in the hut or standing around it cry to God for help and assistance in dull, often
846 plaintive voices. The birth of a boy is more desired than that of a
[842] girl, but the greatest joy prevails at the birth of twins, especially if both are boys. In that case the woman often keeps only the first-born child with her, while the second one is cared by another suitable

/93 cont./

845 wife of her husband: often, however, she also names both herself.
[301] Soon after birth the twins receive a leather cord trimmed with cowrie shells hung around their necks, as expression of personal pride, so that everyone will immediately recognize the child as belonging to
[302] a pair of twins. To be sure, the Mawi living in a circle of two to three days' march are well acquainted with each other and are immediately informed of every bit of news through the constant intercourse between the individual kraals. "Every Mawi coming from farther away, however, upon seeing a child unknown to him, always asks first of all: "Who is his father?" The birth of triplets is said not to occur. After the birth of a deformed or dead child, the young mother is beaten by the women of the kraal and the father over-
[303] whelmed with abuse from the other men. The woman is punished because it is assumed that the premiral sexual intercourse in far advanced pregnancy and through that injured the fetus. But then an
[304] unnatural birth or a stillbirth is also regarded as a punishment of God for a sin, especially as one directed against a relative, a fellow lineage or tribal member, be it through inflicting an injury or
847 neglecting a bond of friendship or love. They admit the killing of newborn children only in case the child comes into the world very frail or was conceived out of wedlock by an old, sick man. There can be no doubt, however, but that they also kill deformed children immediately after birth, for one never sees cripples among them.

• 848 During the birth process the women of the neighborhood have assembled together in front of the hut of the woman in childbed, in order to bring her milk or also flour. First of all the other wives of
[324] her husband leave them, as well as the women of her kin, her lineage or tribe. Good /93/ bowding demands it of them and they comply in order not to be subjected to the mockery and abusive language of the others. When the child is brought into the world, the women of the kraal sing and dance, in order to thank Ng ai for the successful birth, for which they receive an ox from the father of the newborn child, which they immediately consume outside the kraal. The next day a second ox is slaughtered, at the consumption of which
005 any guest is welcome. In the lineage of the Ei kiboko every newborn

Midwifery and Women's Ailments

759 Midwifery is in the hands of older women, who, as *ñ gatoijok* (sing. *ol gatoijok*), professionally practice the calling of midwives and have at their command a surprisingly accurate anatomical knowledge of the body parts in question. It seems that only in
893 exceptional cases are they not called upon at a birth. At the beginning of the last month of pregnancy the midwife examines the pregnant woman several times, in order to determine by palpation of the abdomen the position of the child. The head position is regarded as the most favorable for the birth; thus, if the woman being the examining finds another one, she attempts to change it to the desired one by means of a massage.

• 894 As soon as the first labor pains begin, the midwife, who lives
899 either in the same kraal or in one nearby, is called in. She finds the woman in labor, who, incidentally, is not regarded as unclean, on the bed in her hut in a squatting, sitting, or lying position. With a normal birth the assisting woman remains in attendance without performing any kind of superstitious or irrelevant manipulations. On the other hand, if it proves necessary to bring about an intensifying of the labor-pain activity, the midwife, with the help of a few women, first leads the woman in labor around for a few steps and, if the desired result is not obtained in this way, further help is given by means of a light massage. Only if these remedies prove insufficiently effective does one attempt the last one: The woman giving birth is /191/ slowly lifted by her feet by several women until her body hangs vertically and the crown of her head touches the ground, whereupon the midwife massages her abdomen in the direction of the navel.

The use of internal medicine to promote labor-pain activity is rare; a mixture consisting of liquid sheep fat and a decoction of *ol ngi* root (*Cordia ovalensis* Chiov) is regarded as effective.

The midwives questioned regard the undertaking of turnings through insertion of the hand, in analogy to the birth assistance given livestock,

/197 cont./

• 844 as practicable and useful in and of itself, but understandably fear doing more harm than good with it because of the impossibility of observing the necessary cleanliness. Deeper, internal, manual and operative intervention to facilitate or to make possible the child's emergence does not seem to be practiced anywhere. Support of the perineum to prevent tears does not take place, but the opening of the vulva is not infrequently enlarged by a small incision above or by one above and below, in order to prevent tearing of the entire perineum.

845 184 One stands helpless when confronted by a pelvic narrowness obstructing the birth. Mother and child succumb to it. Although this situation practically never occurs among the Masai living in the tribe, it was often observed among those living in the European settlements, and, to be sure, the pelvic narrowness was always because the woman was too young. These last Masai, in the manner [582] of the coastal people, and in contrast to the former, marry very young, and since the woman must always be considerably younger than the man and, on the other hand, the choice of girls is limited, it not infrequently happens that the latter, upon entering marriage, though sexually mature, nevertheless do not yet have a fully adult skeleton. This phenomenon, not infrequent among primitive peoples, must perhaps in general, and in this instance in particular, be traced back to premature sexual intercourse and, because of that, premature menstruation.

844 During the birth act the woman giving birth adopts either a position "on all fours," similar to the knee-elbow position, or a sitting one, in the latter of which she plants her bent legs against hut posts and leans herself against a hut pole, which she grasps with her hands above her head. The first position is probably the most widespread. Two women standing beside the woman giving birth, to the right and left, holding her by the shoulders, seem to be trying to hold her suspended. In front of this group, with her head under the woman giving birth, crouches the midwife, in order to receive the child.

"As soon as the head and one shoulder are born," an eh gaitoijoni expressed herself, "the rest follows by itself; only rarely is it necessary

/197 cont./

• 844 that I give a gentle tug with a hooklike insertion of the index finger into the armpit of the child."

/198/ In order to hasten the exit of the afterbirth, one of the assisting women tries to promote labor-pain activity by tickling with a feather the palate of the woman giving birth. This manipulation is also used in rare cases during the periods of the preliminary and of the actual labor pains. During the afterbirth period the child's umbilical cord is removed, in that the umbilical cord (os entui) is first tied close to the body with a cord of bark bast and then cut at a place an inch away from the body with the instrument otherwise serving as a razor, the oi moremje. A navel bandage is unknown. [184] The afterbirth, which is not the object of superstitious customs, is tossed into the livestock kraal by the midwife in some districts, buried there at night in others.

The newborn child is cleaned by a rubbing with liquid fat. According to statements of the people, this treatment, however, is supposed to represent not so much a cleaning as a strengthening and comfort. Then the child is laid beside its mother on a soft leather skin freshly greased. As soon as the latter has recovered from the 846 birth act, she chews four grains of oi odoa (Maesa lanceolata) and [824] [757] gives the child an extract of these as a purgative. On the following [751] day the newborn child is given its first bath, consisting of a tepid extract of the twigs of ak gairetual (Physalis minima L.) and the stalks of eig alterolpal (Commelina spec.), to which is ascribed the action of a protective magic against sickness. Cold baths, say, for the purpose of hardening, are unknown. The child remains unclothed.

846 757 The woman in childbed leaves her hut as a rule as soon as her condition permits, which is usually already the case on the following day. Her medicinal treatment consists first of all in the administration of laxatives, for which in this case a mixture made out of liquid fat, honey, steppe salt, and a few pounded oi odoa corns, as well as a leaf infusion of os sinet (Grewia bicolor Juss.), is especially prized. Furthermore, she is given a beef soup seasoned with oi olisle bark (Colubrina asiatica Brongn.), as well as a decoction of oi gabere l e gemma (Sphaerantus microcephalus), a leafy swamp plant, or a leaf infusion of oi edurut (Epaltes gariepina) or also a decoction of

I-suut	E-suuti	The dust.
I-senya	O-senyai	The sand.
Il-tian	Ol-tiani	The bamboo.
Il-tudata	Ol-tudutai	The boil, abscess.

EXCEPTIONS.

There are only a few exceptions to this rule. They are as follows:

Il-Masaae	Ol-Masaani	The Masai [4].
Il-Aiaungua	Ol-Aiaungui	The European [5].
Il-Mzungu	Ol-Mzungui	

[552]

[1] Ol-maoi means a child who has a twin brother or sister. [845]

[2] A large egg-shaped cask used for beer, &c., is Ol-mŏeori, pl. Il-mŏeria. [915]

[3] An unlucky child, or a dwarf, is E-ŋguki, pl. I-ŋguka.

[4] The original name of the Masai is said to have been Il-Mas (sing. Ol-Mai), and one even now occasionally hears old people using this word, especially when relating stories of former times. According to tradition the present form dates from the introduction by the Swahili traders of a certain kind of bead called Ysa or Ysaa (sing. O-Sasai). [101] [79]

[5] Europeans, or white people, were formerly called 'L-ŋiŋja, the hairy ones. This appellation was afterwards changed to 'L-Aiaungua, a corruption of the Swahili word Mzungu, which in the end gave way to the present form. [86]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

his father's home or in his own *manyata*. But it seems that a ceremony is performed which releases the husband from the prohibition on warriors having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers; she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 837 848

Polygyny

A man may have as many wives as he can pay for: one of Hollis's texts says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and over are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, *enk-ay*, the first wife on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. 595

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own *ol-eji*) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A warrior is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uncircumcised boy. 837 684

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 586

Adoption

In the old days, children captured in war were often adopted; and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, *enk-ainyiani*. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Hollis says till the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. 844 846 843 833 845

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother 553 852

853 bring back the milk secretion by a copious drinking of liquid sheep fat. Meanwhile the child is nourished with cow's milk.

757 For pains in the uterus (eñ gusset) and in the uterine ligaments (es sabol, es sabo) the woman drinks a root decoction of ol mañgulai (Grewia villosa).

847 To induce an abortion, the one concerned drinks a decoction of
824 dried goat manure or a strong docoction of os segi (Cordia quarensis)
[237] or ol durgó root. During the subsequent two or three days of convalescence she takes a weak decoction of ol mokotan bark or one of the bark of ol oilale (Colubrina asiatica).

163 Concerning fertility, the relationship of the sexes, and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 17. The 87 old women questioned had given birth to 548 children all together, which gives an average of 6.3 confinements for one woman. Of these, 231, therefore 42.2 per cent, were boys, 371, therefore
[165] 57.8 per cent, girls. Before their circumcision 38.7 per cent of the children died, including the stillbirths.

845 It should also be mentioned that the realization of a twin preg-
842 nancy is regarded as having arisen through one conception.

Food.

Amongst the Masai the principal food of the old men, the women, and the children is milk. 262

The warriors alone drive bullocks into the forest, and slaughter them there: at other times they go to the married people's kraals and drink milk, but they never remain for two months together without slaughtering.

Whenever the old men, the women, and the boys are able to do so, they likewise eat meat. They also eat an ox if it dies a natural death [1], or if it is bitten by a snake, or if a beast of prey has killed it.

The Masai elders, however, do not slaughter their cattle without good cause, and a man who is very fond of meat is called a Dorobo. [186]

Whenever a woman gives birth to a child, a bullock is slaughtered, and she is given the fat. [846]

A pregnant woman is not given good food. When she wants meat, she is given bones or lean scraps; and when she wants milk, water is mixed with it. [843]

The Masai are also very fond of blood. They tie a leather ligature round the neck of a beast and pierce a vein with an arrow, the shaft of which has been blocked. When the blood gushes forth, they catch it [415]

[1] The Shilluk and other Nilotic tribes also eat cattle which have died a natural death (Gessi, *Seven Years in the Soudan*, p. 30, &c.). [121] [113]

FL12 Masai FL12

844 the hut were gathered together the gossips of the kraal, mingling, so far as space permitted, with calves and goats.
[415] A number of large calabashes lay in one corner, and a coarsely-made earthen cooking-pot in another. Fleas in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which pertinaciously would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on
[842] the part of the mother, who heard with deep pleasure that her offspring was a boy. Girls are sadly at a discount among the Masai. They would always prefer to have boys, but happily nature sees ahead a little, and takes care that a fair

[133]

supply of girls is provided. As there is no registrar or birth
846 column, I am totally unable to state when our hero first saw
852 the light. That, however, is a small matter. No particular ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly ensconced on her back beneath the bullock's hide which formed the mother's garment.

855 Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew space. Getting above mother's milk, he was soon exercising his incipient teeth on a huge chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

PREFACE.

114 115 IN the past very little detailed work on the social life of the Masai has been attempted, since such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Masai language sufficiently fluently to make such an investigation in that language.

[122] Although I cannot claim any knowledge of the language of the Masai, I have been fortunate enough to become friendly with four Masai who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn something from them about their customs.

[124] These notes are of necessity brief and full of lacunæ, since I avoided asking direct leading questions, though tempted to do so, and also because they do not include information unless it was obtained from or corroborated by more than one informant.

[101] The Masai from whom this information was obtained came from that part of the Masai Reserve which lies to the west of the Mau Escarpment, and I was not able to find out whether these customs prevailed among the whole of the Masai group.

My two principal informants were an old woman, past child-bearing, and her married son, aged about 35 (I have unfortunately lost the paper with their names).

[648] [128] They were insistent that most of these customs have been slightly modified since government control has been set up, but I have, notwithstanding, written mainly in the present tense.

PART I.—CHILDHOOD.

844 *Birth.*—Among the Masai, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she assumes a stooping position supported by other women, as the first child is considered more difficult to deliver; otherwise a woman giving birth to a child lies upon the bed. The acting midwife cuts the cord with a special instrument,[1] and both the woman and new-born child are washed with warm water. The placenta is carried out and thrown down in the cattle yard, but is not buried. As soon as the child is born its sex is ascertained in order that an animal may be bled to supply blood for the mother to drink. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood see Part IX.) From the day of birth onwards many sheep and goats are killed to supply meat and fat for the mother [846] in order that the child may grow up strong, but these animals have no special significance, and are not sacrificial or for purification purposes.

553 [171] *Naming Ceremony.*—Children are not named until they can run about, and unlike some other East African tribes, the child does not inherit any name from any PARTICULAR RELATION.

[1] There is some mystery attaching to the instrument used, and I am not sure what it is.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

his father's home or in his own *manyata*. But it seems that a ceremony is performed which releases the husband from the prohibition on warriors having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers; she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 837 848

Polygyny

A man may have as many wives as he can pay for: one of Hollis's texts says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and over are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, *enk-ay*, the first wife on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. 595

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own *ol-eji*) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A warrior is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uncircumcised boy. 837 684

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 586

Adoption

In the old days, children captured in war were often adopted; and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, *enk-aiteyioni*. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Hollis says till the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. 844 846 843 833 845

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother 553 852

In the
/52 cont./ lineage of the El Kiborón every newborn
851 [613] boy is exposed to an ordeal through which it is supposed to be shown whether or not his begetter belongs to another lineage. In the evening, when the livestock comes home, the child is laid in the entrance of the kraal so that the entire herd of cattle steps over it. If the little one is killed during this or so seriously wounded that it dies from it, it is regarded as a bastard.

• 846 In most districts the young mother is not obliged to live isolated in the hut for a specific number of days, but leaves it as soon as her condition permits, often the very next day. In others she may not go out of the hut during the first ten days after the delivery, during which time the woman who assisted her then does all the work for her. For four days following the birth neither fire nor household objects may be carried out of the hut. During this time the woman smears her forehead daily with white clay. She does the same when, before the ensuing recovery, before the complete reversion of the genital parts, alone or with the infant, she goes out of the immediate vicinity of the hut or of the kraal. Until the newborn child can walk, the father may not eat any food in its hut and may not enter it during the first ten days after the birth. If he has had sexual intercourse with one of his other wives, he may not touch the baby the next day. If the mother dies during the nursing period, another woman nurses the child, whereby her own children with respect to it enter into the relationship of foster brothers and sisters, regarded as consanguinity, or else it is fed cow's milk by means of a bottle.

854 The newborn baby is given a sleeping place beside that of its mother, whose leather apron serves it as an underlayer. Here the child rests, and, to be sure, on its side, not lying on its back, usually only as long as the mother is sitting beside it and during the night. Otherwise she carries the little one around with her, and, to be sure, on her back as a rule, more rarely straddling her hip or on her arm. The latter way of carrying is customary only with very small children, say during the first month of life. Even while the mother is working, her child remains on her back, held fast by her upper apron. Only if the little one makes its discomfort known by prolonged crying does she hand it to a woman nearby to be quieted or nurse it -- if it is somewhat bigger -- on a clean and safe spot on

18: Merker--280 G-5 (1898-ca.1908) 1910 FL12 Masai FL12

/197 cont./

844 that I give a gentle tug with a hooklike insertion of the index finger into the armpit of the child."

/198/ In order to hasten the exit of the afterbirth, one of the assisting women tries to promote labor-pain activity by tickling with a feather the palate of the woman giving birth. This manipulation is also used in rare cases during the periods of the preliminary and of the actual labor pains. During the afterbirth period the child's umbilical cord is removed, in that the umbilical cord (*ol ngoya*) is first tied close to the body with a cord of bark bast and then cut at a place an inch away from the body with the instrument otherwise serving as a razor, the *ol mesenja*. A navel bandage is unknown. [184] The afterbirth, which is not the object of superstitious customs, is tossed into the livestock kraal by the midwife in some districts, buried there at night in others.

The newborn child is cleansed by a rubbing with liquid fat. According to statements of the people, this treatment, however, is supposed to represent not so much a cleansing as a strengthening and comfort. Then the child is laid beside its mother on a soft leather skin freshly greased. As soon as the latter has recovered from the • 846 [824] [85] [851] birth act, she chews four grains of *ol odea* (*Haesa lanceolata*) and gives the child an extract of these as a purgative. On the following day the newborn child is given its first bath, consisting of a tepid extract of the twigs of *ok gaiwuai* (*Physalis minima* L.) and the sallie of *olig ainentjai* (*Commelina* spec.), to which is ascribed the action of a protective magic against sickness. Cold baths, say, for the purpose of hardening, are unknown. The child remains unclothed.

846 797 The woman in childbed leaves her hut as a rule as soon as her condition permits, which is usually already the case on the following day. Her medicinal treatment consists first of all in the administration of laxatives, for which in this case a mixture made out of liquid fat, honey, steppe salt, and a few pounded *ol odea* corns, as well as a leaf infusion of *ne ainei* (*Grewia bicolor* Juss.), is especially prized. Furthermore, she is given a beef soup seasoned with *ol olisia* bark (*Celastrus senegalensis* Benge.), as well as a decoction of *ol gebere* [illegible] *e gorora* (*Sphaerococa microcephalum*, a leafy swamp plant, or a leaf infusion of *ol ednai* (*Syzygium guineense*) or also a decoction of

/190 cont./

• 846 757 roots and leaves of e'mîkâ (Melanna indicum Wernt.). To both is ascribed the effect of promoting the recovery of the birth organ. This is further assisted by putting on a leather body belt (ed gîdet, ê gîdâin) 20 centimeters wide. As a means for strengthening and for increasing the milk secretion, one gives the nursing woman a root decoction of ol asaiai (Oxyris tenuifolia Engl.) mixed with fat.

853 During the first weeks of life the newborn child, which, incidentally, is often put at the breast soon after birth, is given, besides the mother's milk, a great deal of liquid butter, which during the first eight days even wholly replaces the former in case the child refuses the breast. Later such a child is given /190/ cow's milk as a substitute [415] for mother's milk, and, to be sure, from a nursing bottle (on bugurî ed gerai [Fig. 80]), which consists of a hollowed-out bottle gourd, over whose upper, open end, as a sucking stopper, is turned a screw of leather pierced at the tip. During the sucking the mother is usually seated, while the child lies horizontally on her lap or squats beside her on the ground. More rarely the woman stands and holds the baby on her arm in a sitting position; even more rarely mother and child further lie side by side on the ground. The suckling period, during which the mother is called en dumenoik, lasts about two years. Its end as a rule is conditioned by the onset of a new pregnancy, in that the woman nurses a male baby up to the third month of pregnancy, a female one up to the fourth or 862 fifth month. Weaning, for which superstitious considerations are of no importance, comes to pass either in that one removes the baby from the mother, takes it to another hut nearby, or [853 415] the mother makes the breast distasteful to it by rubbing her nipples with the bitter juice of the → ee nagumi alaw. A premature drying-up of the 853 mother's milk is explained by the woman's physical constitution. The woman seeks to

§33 §36 attached to the warriors to sleep with them. In fact, we may say that for the girls sex life starts before puberty and continues (with no such period of sexual prohibition as the boys have during the novice stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that [§34] sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

§41 *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refuse all invitations to sleep with men or boys. There is no restriction of work during the menstrual [§41] period as there is among some Bantu tribes, but a girl or woman must wash her hands before milking if she is menstruating.

§42 *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special teaching about this, girls grow up with this knowledge and take care not to allow full intercourse during the few days immediately following menstruation. Occasionally, of course, a girl does allow sexual intercourse at this time, either because she is carried away by sexual desire, or because she deliberately wishes to conceive for some reason or another (see Warriorhood). In the former case she will try to bring about abortion.

§47 *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she sends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortifacient. This is the only method used.

§50 §51 §52 §54 *Penalty for Conception.*—If an unbaptized girl conceives and her condition becomes known she must immediately be initiated. In the normal way (see below) her initiation would take place at her mother's home and the necessary arrangements would be made by her father, but if she is to be initiated because she is with child the case of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. He only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one heifer and a quantity of beer to the girl's father, " because he has prevented the father

/52 cont./

/Instance 1 cont./ husbands. Intercourse to whom a woman has given birth from due living with another man belong to the husband, even though they also call their genitor father.

They abort an immature fetus when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a potion are used, which are said to be innocuous during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

They are accustomed to having intercourse lying on their sides, the woman's upper knee placed over the man's loins. They do not customarily cohabit except at night. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would retain nothing but water.

Boys and girls already begin to practice cohabitation at the age of eight to ten.

It is considered extremely shameless to break wind in the presence of women.

V.

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Confinement. -- Festivities in connection with the birth. -- Twins. -- Deformed child. -- Killing newborn children. -- Behavior of the women in childbed. -- The newborn child. -- Childhood. -- Children's games.

As soon as the woman feels pregnant, the spouses separate until after the nursing period, which lasts approximately 1 1/2 to 2 years. Another man may not touch the woman during this period, any more than her husband. This stipulation, however, seems to be little

/91 cont./

845 wife of her husband; often, however, she also nurses both herself.
[D01] Soon after birth the twins receive a leather cord trimmed with cowrie
shells hung around their necks, as expression of paternal pride, so
that everyone will immediately recognize the child as belonging to
[D03] a pair of twins. To be sure, the Masai living in a circle of two to
three days' march are well acquainted with each other and are im-
mediately informed of every bit of news through the constant inter-
course between the individual kraals. "Every Masai coming from
farther away, however, upon seeing a child unknown to him, always
asks first of all: "Who is his father?" The birth of triplets is said not
to occur. After the birth of a deformed or dead child, the young
mother is beaten by the women of the kraal and the father over-
[D13] whelmed with abuse from the other men. The woman is punished
because it is assumed that she practiced sexual intercourse in far ad-
[D14] vanced pregnancy and through that injured the fetus. But then an
unnatural birth or a stillbirth is also regarded as a punishment of God
for a sin, especially as one directed against a relative, a fellow
lineage or tribal member, be it through inflicting an injury or
• 847 neglecting a bond of friendship or love. They admit the killing
of newborn children only in case the child comes into the world
very frail or was conceived out of wedlock by an old, sick man.
There can be no doubt, however, but that they also kill deformed
children immediately after birth, for one never sees cripples among
them.

849 During the birth process the women of the neighborhood have
streamed together in front of the hut of the woman in childbed, in
order to bring her milk or also flour. First of all the other wives of
[E26] her husband hasten there, as well as the women of her kin, her
lineage or tribe. Good /92/ breeding demands it of them and they
comply in order not to be subjected to the mockery and abusive
language of the others. When the child is brought into the world, the
women of the kraal sing and dance, in order to thank 'Ng ai for the
successful birth, for which they receive an ox from the father of the
newborn child, which they immediately consume outside the kraal.
The next day a second ox is slaughtered, at the consumption of which
000 any guest is welcome. In the lineage of the Il kiborón every newborn

[Warrior Kraal]

/84 cont./

836 701 Every warrior has his favorite girl (na sandja) (1).

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover na sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

142 301 714 →

Ill. 31. Warrior in war adornment.

/199 cont./

853 being back the milk secretion by a copious drinking of liquid sheep fat. Meanwhile the child is nourished with cow's milk.

757 For pains in the uterus (ni gumi) and in the uterine ligaments (ni nabi), as ellal the woman drinks a root decoction of ni mulgulai (Gowia vilosa).

• 847 To induce an abortion, the one concerned drinks a decoction of 848 dried goat manure or a strong decoction of ni wgi (Cordia quarmata) 849 or ni dargi root. During the subsequent two or three days of convalescence she takes a weak decoction of ni mukeras bark or one of the bark of ni ollale (Celtis wightii).

163 Concerning fertility, the relationship of the sexes, and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 17. The 87 old women questioned had given birth to 548 children all together, which gives an average of 6.3 confinements for one woman. Of these, 231, therefore 42.2 per cent, were boys, 271, therefore [165] 57.8 per cent, girls. Before their circumcision 38.7 per cent of the children died, including the stillbirths.

845 It should also be mentioned that the realization of a twin pregnancy is regarded as having arisen through one conception.

/940 cont./

122 shareholder, the rest of the shares are in the hands of his wives, who
915 acquire these shares through the birth of a son. Through this the wives, who have the duty to tend and care for the livestock, are interested in the preservation of the property in the most extensive way. This is the one factor of the polygamy of the Masai promoting prosperity with all its advantages for the political economy. The other lies in the fact that many women give birth to more sons for one man than one woman could. Sons, however, male offspring are augmenters of the paternal property. The boy grows up to become a warrior and brings his family the spoils of the numerous raids, through which not only is the herd increased, but, through the supply of new blood, is also improved.

Polygamy among the Masai is therefore a natural institution. Without it large masses of women would be deprived of their natural occupation, a condition that seems impossible for a primitive people. It is, moreover, a source of prosperity, which, among a culture-poor nomadic people, can only make itself felt favorably for their preservation as a people. From it follows, first of all, good nutrition, which makes the body resistant to the effects of illnesses. It corresponds to my observations that among the Masai in general, among adults, fewer cases of death occur as a consequence of illness than is the case among the Negroes living in their vicinity. Also, serious illnesses are more infrequent among them than among the former and are milder in their course. The circumstance that abortion is practiced by the women in only very rare exceptional cases also undoubtedly acts to preserve health. One can sufficiently observe the harm that this bad custom has often caused primitive peoples among the various neighbors of the Masai, though indeed there are also exceptions to this. Thus, I met a number of Dahagga women who went through this operation four to six times and allegedly, as well as apparently, without harm.

122 In contrast to the high fertility there is also a rather high child
[illegible] mortality, though infanticide is entirely unknown. It is definitely
[illegible] beneficial for the child that through work the mother is not kept
[illegible] outside the kraal, but can always remain in the vicinity of the child.
[illegible] The long nursing period of about two years is also advantageous.

/360 cont./

824 141. *ol dengi* (Cordia gharaf [Punk.] Roemb., Cordia quercuna Cliche). The inflamed eyes of livestock are washed out with a decoction of root or bark. About three finger-sized pieces of the root are chewed to induce abortion. The roughly pea-sized vermilion fruits, called *ol [illegible]*, are edible. At times of food shortage they constitute the chief food in some El Molo settlements, for example, in Ngurumas, where this large shrub occurs very abundantly. The European, after eating a few berries, feels as though his lips were stuck together.

142. *ol [illegible]* (Psylanthus Mildbraedianus Vatkent). A person who has stolen a head of livestock zealously avoids breaking off a twig of this shrub, since it is believed that otherwise the one robbed would soon recognize the thief as such. The twigs are used as goat ladder.

143. *ol [illegible]* (Cordia abyssica Cell.). A decoction of the plant serves as a remedy for stomach-aches for children.

144. *ol [illegible]* (Delphine Millmandelbarium Tuckert). Named after *ol [illegible]* - the wild pig, which likes to eat the plant. One washes young livestock with an extract of the leaves to get rid of fleas.

145. *ol [illegible]* (Vernonia).

146. *ol [illegible]* (Rhamnus napecha Poyr.). Rich fodder for small livestock.

147. *ol [illegible]* (Brillia cathartica Ker.). An extract of the pounded root is used as an aid to digestion and is therefore regularly drunk by the warriors at the *ol [illegible]* meals.

148. *ol [illegible]* (Psychotria foerula E. Sch.). The sword scabbard is made out of the wood.

149. *ol [illegible]* (Podocellaria pennaphylla L.). Good fodder for small livestock.

150. *ol [illegible]* (Spatium gaetanum). During the first days after delivery, the woman in childbed is given a decoction of the plant, to which is attributed a favorable effect on the recovery of the birth organs.

[954] 151. *ol [illegible]* (Cissampelos Pareira L.). Pieces of root are worn as amulets, mostly on the neck ring, for all possible illnesses, and, to be sure, both to prevent them and to cure them.

/375 cont./

824

435. *ee* *ndgaech* (Pennisetum ciliare Link) is a good fodder grass. The name *ee* *ndgaech* also designates various thick grass and reed species; from one of the latter, in the primeval age, according to the myth, people made a reed splinter, which served for cutting the umbilical cord of the newborn child.

436. *ee* *ile* (Leucas glabrata [Vahl] R. Br.).

437. *ee* *ilgi* (Cassia quarrensis Oliver). A pile of this wood is burned at the *el ngor* | *el gaiki* feast. Quarreling people are separated by placing an *ee* *ilgi* branch between them; one who would step over this would be punished by God. The girl who has become pregnant chews approximately four finger-sized pieces of root to induce an abortion, whereupon the foetus is said to die quickly and to be expelled. For pains in the leg one ties a small piece of the wood around the ankle.

438. *ee* *ilja* = various species of reed.

439. *ee* *ilji* (Cyperus spec.). Good livestock-fodder.

440. *ee* *ujai* | *el gare* (Cyperus spec.).

441. *ee* *ujai* | *el ningan* = *el ilmomi* | *el ningan* (Kyllingia alba).

442. *ee* *ujolgorok* (Indigofera kilimandscharica Vika.).

443. *ee* *ensiyo* (Cassia obovata Coll. and Cassia didymobotrya Fres.). A decoction of roots or leaves with the addition of some milk or butter is drunk as a remedy for pain and swelling in the spleen.

444. *ee* *ialki* (Acalypha pelotachystoides Pax.). From the branches the boys make the shafts of the small arrows used by them.

445. *ee* *ialki* *gin* (Acalypha fruticosa Pamb.).

A child not born in wedlock is called The child of seduction or The child of the fireplace.

Murder.

If a Masai warrior strikes another and kills him, he runs away and hides himself. 682

Should there be no judges, the brothers of the murdered man will kill the murderer.

If the latter is not killed, the elders make peace between the two families, and garments are exchanged. The family of the murdered man takes the murderer's garment, and the latter takes the garment of one of the dead man's brothers.

The murdered man's brothers then wait for two years, at the expiration of which they call together all their clan, and go and lift the murderer's cattle, taking them as they would in a raid.

If there is a cow in the herd with a bell tied round its neck, it is left behind.

The herdsman is carried off as well; but when the party have arrived at the kraal where the murdered man lived, he is allowed to return to his own kraal.

Blood money is not paid by the

5: Maguire G-5 (no date) 1928
FL12 Masai FL12
Kisongo

685 stolen, the fine is one ox for each sheep stolen. In the cases of thefts from *'l-meek*, the fines are always reduced, because it is held by the Masai that all the cattle in the country belong, in reality, to them.

If the thief has no cattle, he must give his daughter in marriage to the man whom he has robbed if the latter is a Masai. He gets paid the usual dowry for her, however. If the theft is one of money (a practically unknown crime), the amount of the fine is regulated by the amount of money stolen and the fine must be paid in cattle.

The offence of arson is not known, and there is no stated penalty. If, as a result of grass-burning or through carelessness, a man is the accidental cause of another's kraal being destroyed by fire, he is supposed to bring a bottle of honey, or a cow,[1] by way of compensation. No fine is laid down.

En-giopo: Adultery. *En-giyaapare*: Seduction

684 [754] If it be known that a man has lain with a woman of another age, he is cursed and has to pay two bottles of honey and two cows before the Elders will remit the curse.[2] Should he be caught in the act, the friends of the cuckold tie him up at the kraal door and he is beaten, pelted with cow-dung and spat upon by everybody, including the women. If the offender is a warrior, his pigtail is cut off and he is cursed. This humiliating punishment is greatly dreaded.

It is no offence for a man to commit fornication or adultery with a woman or girl of his own age, but should a warrior fertilise an unmarried girl, it is considered very wrong. He must pay a cow and a bottle of honey, and the child will be the property of the man the girl is going to marry.[3] If the girl is not engaged, the child will be the property of her father, or her eventual husband may take it. By arrangement, Masai warriors generally marry the girls they cause to conceive.

[1] The Masai are not definite regarding the cow in this case. In fact, the Elders had a mild squabble on the point when the above information was being taken.

[2] See Hollis, *The Masai*, p. 302.

[3] Masai girls are often engaged to be married from their very earliest years.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

883 attached to the warriors to sleep with them. In fact, we may say that for the girls
836 sex life starts before puberty and continues (with no such period of sexual prohibition as the boys have during the novice stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that
[834] sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

841 *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refuse all invitations to sleep with men or boys. There is no restriction of work during the menstrual
[191] period as there is among some Bantu tribes, but a girl or woman must wash her hands before milking if she is menstruating.

842 *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special teaching about this, girls grow up with this knowledge and take care not to allow full intercourse during the few days immediately following menstruation. Occasionally, of course, a girl does allow sexual intercourse at this time, either because she is carried away by sexual desire, or because she deliberately wishes to conceive for some reason or another (see Warriorhood). In the former case she will try to bring about abortion.

847 *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she sends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortifacient. This is the only method used.

849 *Penalty for Conception.*—If an uninitiated girl conceives and her condition
850 becomes known she must immediately be initiated. In the normal way (see below)
851 her initiation would take place at her mother's house and the necessary arrangements
854 would be made by her father, but if she is to be initiated because she is with child the onus of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. Not only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one heifer and a quantity of beer to the girl's father, "because he has prevented the father

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

from having the honour of the feast of her initiation." Should the man decide to marry the girl, this heifer is counted as one of those which must be handed over for the marriage transaction (see Marriage).

Girls' Initiation.—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the warriors or boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a *manyatta* with one of her sons, then the girl's initiation will take place at the *manyatta*, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place when the day of the ceremony has been fixed and beer is prepared. A ram called *ololenjoka* is slaughtered either before the actual operation or just after it. This is the "ram for childbearing," and is supposed to insure fertility. This ram is eaten by all those present at the ceremony. The actual operation is performed by an old woman, who is a skilled operator (she may be either a Masai or a Dorobo), and the girl sits on a skin inside the hut during the operation. The operation is said to be the same as that used by the Kikuyu on their girls, and this is a form of circumcision, but exact details cannot be obtained from the men. As soon as the operation is over the operator washes the girl to "cleanse her of the blood spilt" and a ram is then slaughtered and given to the operator. This ram is called *olengwat*. Next a ram is killed called *ololdatat* to provide meat and fat for the girl during convalescence.

Shaving Ceremony.—Finally after the girl is healed and before she can go to her husband's village, a ram is killed called *olkerwet*, which is the "ram for the shaving," and at the same time the girl's head is shaved by her mother.

PART V.—MARRIAGE.

Kinship.—Marriage is always exogamous as far as sub-clans are concerned, but marriage within the main clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No one, whether as a boy, warrior, or a married man, may at any time ever have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (see below).

A woman remains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband.

Betrothal.—Amongst the Masai there are two usual methods of betrothal:—

(1) Betrothal of infant children.

(2) Betrothal of infant girls.

his father's house or in his own manyata. But it seems that a ceremony is performed which releases the husband from the prohibition on warriors having sexual relations with married women. 585

A widow is looked after by her husband's brother, or by one of her own brothers; she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. 587 837 848

Polygyny

A man may have as many wives as he can pay for: one of Hollis's texts says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and four are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, *enk-ang*, the first wife on the right of the gate as you go in, the second on the left. To each wife an allocated cattle which she holds in trust for her children. 545

Adultery

Adultery is not common, however the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own *ol-ayi*) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A warrior is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uninitiated boy. 837 664

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. 586

Adoption

In the old days, children captured in war were often adopted; and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in times of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. 597

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, *enk-ainyonet*. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Hollis says till the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. 949 946 943 933 945

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox; the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, milks the cows. After this, the child is named in the presence of the father and mother 953 952

/44 cont./

584 A betrothal in earliest childhood is not infrequent among the Masai, though also not common by far. In such cases the father of the boy, several months after the birth of a girl, asks for her [592] for his son. Such a betrothal is in no way binding; rather it seems to have only the value and purpose of strengthening a friendship between the two fathers and assuring each other of mutual aid in case of impoverishment. It probably need scarcely be mentioned that in connection with a betrothal in early childhood it is only a matter of the betrothal of the boy to his later first, that is, principal, wife. Usually the betrothal to the later principal wife is not entered into until the boy is 20 or 22 and the girl eight to ten years old. For the former, his father makes the proposal to the mother of the girl, after the bridegroom himself has made sure of the girl's consent. As soon as the mother has then obtained the consent of her husband, she anoints the head of the bride with butter or beef fat, as a sign that the betrothal has been accepted and the girl is now betrothed. As such she is called ainoto. During the period of betrothal the couple do not come together; the bridegroom avoids the kraal in which his bride lives, but, if he should enter it, the girl hides from him. Thus the two live completely separated from each other, and, to be sure, in two different warrior kraals. The bridegroom, first as young warrior [591] (el barnit, el barnit), then as actual warrior (el morlat, el molat), lives with his companions and a corresponding number of young girls in one kraal, the bride, on the other hand, with other 584 young girls and warriors in another, distant one. If the girl be- 598 comes pregnant during this time, it is regarded as a disgrace and usually leads to dissolving the betrothal. If the latter, by way of exception, is not the case, the betrothed men marry as soon as possible. Otherwise the girl awaits her confinement in the hut of an old woman from among her relatives, and after the nursing period is over she goes to another, distant warrior kraal, in the 582 hope of finding a husband there. Only when the warrior is tired of the military life, when his physical strength falls behind that of the majority of his companions, does he think of getting married, in order not long afterwards to exchange the military life

[Warrior Kraal]

/94 cont./

236 701 Every warrior has his favorite girl (ne sendje) (1).

[231] 1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered as outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime persons do not have intercourse for one or two months. Repeating the hymen is neither a public custom nor a mission rite.

[248] [242] [247] [234] [233]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover ne sendje and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

Inheritance.

When the father of a family dies, his eldest son inherits all his property[1], and also the herds and flocks belonging to the children's widows, but not those which are the property of widows who have sons. 426

The sons by each wife inherit the cattle belonging to their mother's family.

If a man dies childless, his brothers inherit his cattle and his half-brothers his wives. It is unlawful for a man's own brothers (i.e. brothers by the same mother) to take his wives. [427]

Should a widow have a son by her late husband's half-brother or by another man, the child is given the cattle which he would otherwise have inherited had his mother's former husband been alive, and he is considered to belong to that family. 427 428 429

If a man dies and leaves a son who is a minor, the property which he inherits is taken care of for him until he grows up[2]. 430 431

It is considered unlawful for a man to inherit the property of his maternal uncle. 432 433

[1] The Masai distribute their herds and flocks amongst their wives during their lifetime, each one being given a certain number to look after and milk. The cattle so distributed are said to belong to that wife's family, and are recognised as the property of her sons, who, however, do not assume ownership until after their father's death. [434]

[2] In a case of this kind, the child does not go to the mzee, but relatives pass other he is circumcised.

11: Leakey E-6 (no date) 1930 FL12 Masai FL12

from having the honour of the host of her initiation." "Should the man decide to marry the girl, this heifer is counted as one of those which must be handed over for the marriage transaction (see Marriage).

Girls' Initiation.—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the warriors or boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a *manyatta* with one of her sons, then the girl's initiation will take place at the *manyatta*, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place where the day of the ceremony has been fixed and beer is prepared. A cow called *ekiddojoka* is slaughtered either before the actual operation or just after it. This is the "cow for childbearing," and is supposed to insure fertility. This cow is eaten by all those present at the ceremony. The actual operation is performed by an old woman, who is a skilled operator (she may be either a Masai or a Dorobo), and the girl sits on a skin inside the hut during the operation. The operation is said to be the same as that used by the Kikuyu on their girls, and this is a form of circumcision, but exact details cannot be obtained from the men. As soon as the operation is over the operator washes the girl in "cleanse her of the blood split" and a cow is then slaughtered and given to the operator. This cow is called *ekingwat*. Next a cow is killed called *ekiddamat* to provide meat and fat for the girl during convalescence.

Shaving Ceremony.—Finally after the girl is healed and before she can go to her husband's village, a cow is killed called *ekiwuat*, which is the "cow for the shaving," and at the same time the girl's head is shaved by her mother.

Part V.—Marriage.

Exogamy.—Marriage is always exogamous as far as sub-clans are concerned, but marriage within the main clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No man, whether as a boy, warrior, or a married man, may at any time ever have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (see below).

A woman retains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband.

Betrothal.—Amongst the Masai there are two usual methods of betrothal:—

(1) Betrothal of unborn children.
(2) Betrothal of infant girls.

593 931 601 *Gifts in Certain Relations.*—A somewhat similar custom to that which enjoins that a grown-up man must give certain presents to all children born to his father, as follows:—

(1) To a young girl-child, either a heifer or she a young cow or young she-goat which has not yet had young. If the former present is given the child in future calls its brother (or half-brother) father, and if either of the two latter animals is given the appropriate name is below.

(2) To a boy-child, either a heifer or a young man or she a young cow or she-goat which has not yet had young. The following are the appropriate names by which the boy henceforward calls the man: *Ababa* if the gift was a young cow, *ingiai* if the gift was a young she-goat, *ndowo* if the gift was a heifer, *ekiliomo* if the gift was a young man.

A grown-up man must also give a present to any man who married by his father, the animal given and the name thenceforward used by the woman to the man being exactly as in the case of girl-children above.

604 *Mother's Brother.*—Among the Masai I can find no trace of any special functions of the mother's brother, and he has no special position in relation to his sister or her children.

589 *Widowhood.*—There is no idea of mourning attaching to widowhood, and therefore there is no ceremonial purification ceremony before sexual life can be indulged in by a widow. When a woman is left a widow she builds herself a hut with one of her husband's own brothers (i.e. brothers by the same mother), and he becomes responsible for her welfare and acts as her parents to her children so far as making arrangements for initiation and marriage, etc., are concerned. In no circumstances, however, may this brother or any other of her husband's own brothers have sexual intercourse with the woman. If she is still of child-bearing age she is expected to go on having children (who will rank as her late husband's), and to this end she may have sexual relations with:—

(1) Any man of her late husband's age-group, who are not excluded by other restrictions (see above).

(2) Any of her late husband's half-brothers (i.e. brothers by a different mother).

(3) Any other men not otherwise excluded.

597 *Sickness.*—My informant was unwilling or unable to give me any detailed information about the treatment of sick people, save that medicines were made from the barks and seeds of various trees and from the stomach juices of slaughtered animals.

Part VII.—Disease and Death.

[illegible] *Death.*—Death is looked upon with fear and, therefore—except in the case of very old men and women past child-bearing—every precaution is taken to avoid a

/[illegible]/

[illegible] then temporarily move to her mother's, and the man has the right, in the course of the next few or five months, to more definitively [illegible] whether or not he wants to have the woman back. If he demands her return, she must obey; otherwise she may marry again at the end of the stated period of time. The person must then pay back the full bride price to the divorced husband, though he may refuse to accept it, and, to be sure, with the legal consequence that all the children that the woman may still bear belong to him.

The male relatives seek to persuade a runaway -- not divorced -- wife to return, at first amicably, and, if this is of no avail, by a beating in the presence of the husband, while the husband, in that he keeps the children to whom the woman gave birth, hopes to achieve her return by means of mother love. It is said that only in the rarest cases is there a lack of success, especially since at present few awaits the returning woman. She may not legally marry again, and, if she goes to another man in order to remain with him permanently, the children arising from this affair belong to the man whom she left. Though the principle is valid that all children remain with the father, he almost always keeps only the boys and leaves the girls to the mother. The latter also raise along any male suckling and keeps him, but only until he is weaned. Then the most return him to his father. Divorce during a woman's pregnancy does not occur. If two divorced spouses wish to remarry, /[illegible]/ the woman returns to the man without any ceremony. Divorce is generally rather rare. Usually the man lets the woman from whom he wishes to be separated live peacefully in one of his huts, but he does not pay any attention to her. Barrenness is not grounds for divorce, nor is marital infidelity on the part of the women, a concept with which the Ibani while is not familiar (5).

1. /The following footnote is a translation of the texts of the original source./ A husband carries his wife to the guest or night, while he himself spends the night outside the dwelling. To keep the wife from the guest is considered insulting. When she consented to sleeping at any time with [illegible]

/[illegible]/

/footnote 1 cont./ husbands. Brides to whom a woman has given birth from their living with another man belong to the husband, even though they also call their genitor father.

They about no taboo/ve force when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a plaster are used, which are said to be innocuous during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

They are accustomed to having intercourse lying on their sides, the woman's upper leg placed over the man's loins. They do not commonly exhibit escape or sight. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would result nothing but water.

Boys and girls slowly begin to practice cohabitation at the age of eight or ten.

It is considered extremely dangerous to break wind in the presence of women.

V.

Pregnancy. -- Behavior of the pregnant woman and her husband. -- Confinement. -- Parturition in connection with the birth. -- Twins. -- Delivered child. -- Killing newborn children. -- Behavior of the woman in childbed. -- The newborn child. -- Childhood. -- Children's games.

As soon as the woman feels pregnant, the spouses separate until after the nursing period, which lasts approximately 1 1/2 to 2 years. Another man may not touch the woman during this period, any more than her husband. This injunction, however, seems to be little

In the

FILIGRI / Lineage of the El Kiberón every newborn boy is exposed to an ordeal through which it is supposed to be shown whether or not his begetter belongs to another lineage. In the evening, when the livestock return home, the child is laid in the entrance of the kraal so that the entire herd of cattle says over it. If the little one is killed during this or so seriously wounded that it dies from it, it is regarded as a bastard.

In most districts the young mother is not obliged to live isolated in the hut for a specific number of days, but leaves it as soon as her condition permits, often the very next day. In others she may not go out of the hut during the first ten days after the delivery, during which time the woman who assisted her does all the work for her. For four days following the birth neither fire nor household objects may be carried out of the hut. During this time the women smear her forehead daily with white clay. She does the same when, before the ensuing recovery, before the complete recession of the genital parts, alone or with the infant, she goes out of the immediate vicinity of the hut or of the kraal. Until the newborn child can walk, the father may not eat any food in its hut and may not enter it during the first ten days after the birth. If he has had sexual intercourse with one of his other wives, he may not touch the baby the next day. If the mother dies during the nursing period, another woman nurses the child, already her own children with respect to it enter into the relationship of lower brothers and sisters, regarded as consanguinity, or else it is fed cow's milk by means of a bottle.

The newborn baby is given a sleeping place beside that of its mother, whose leather apron serves it as an underlayer. Here the child sees, and, to be sure, on its side, not lying on its back, usually only as long as the mother is sitting beside it and during the night. Otherwise she carries the little one around with her, and, to be sure, on her back as a rule, more rarely straddling her hip or on her arm. The latter way of carrying is customary only with very small children, say during the first month of life. Even while the mother is working, her child remains on her back, held fast by her upper apron. Only if the little one makes its discontent known by prolonged crying does the head it to a woman nearby to be quieted or sent to -- if it is somewhat bigger -- an a clean and safe spot on

the hut, and the skull, instead of being thrown away, is placed by the door. The tail is not separated from the hide as is usually the case: it is left on until the hide is worn out.

Now the offspring bullock is not of necessity slaughtered when the child is born; it is permissible to wait until he is big and until he is about to be circumcised. No person is circumcised, however, until this bullock has been slaughtered.

The circumcision.

The following is a Masai custom:

A Masai child cannot be circumcised until the father has observed a custom called The passing of the fence.

The man who wishes to have his eldest child circumcised brews some honey-wine, and calls his neighbours together while it is being prepared.

A hut is then built for him outside the kraal, and he stays there for four days alone. He also sleeps there, and his food is taken to him.

During these four days he only approaches the kraal to look after his cattle when they are grazing outside.

He must don the clothes, ornaments, and weapons of a warrior—the sword, the spear, the club, and the shield, the cap made from the

6:Thomson K-3 (1883-1884)2887
FLIZ Maori FLIZ

the hut were gathered together the people of the kraal, mingling, so far as space permitted, with calves and goats. A number of large cabbages lay in one corner, and a coarsely-made earthen cooking-pot in another. Flies in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which persistently would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on the part of the mother, who knew with deep pleasure that her offspring was a boy. Girls are really of a discount among the Maori. They would always prefer to have boys, but happily nature sees about a little, and takes care that a fair

MAORI KRAAL, NEAR GOVERNMENT HOUSE, ROTORUA.

supply of girls is provided. As there is no registrar or birth column, I am totally unable to state when our hero first saw the light. That, however, is a small matter. No particular ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly concealed on her back beneath the bullock's hide which formed the mother's garment.

Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew space. Getting above mother's milk, he was seen exercising his incipient teeth on a large chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

particular relation. The naming ceremony is as follows:—When the child was two 553
about a small rum is chosen and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good-looking and of good character, as otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named some of his
own, he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [555]
which is performed with a small, sharp two-edged knife. The reason given for this [312]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [558]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start drawing water they have the holes of the ears pierced. These
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is restricted 242
to milk, fat, and meat, as no crops are grown.

Part II.—Boyhood.

Herding.—As soon as they are considered old enough (and this depends upon the 159
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it 136
is not considered in any way wrong for these boys to begin indulging sexually as soon 143
as they like, provided that they observe certain restrictions. They may do as they 144
like with the younger girls in the neighbouring villages, provided, of course, that they
observe the law forbidding sexual relations with any member of their own sub-clan, [134]

the father's house or in his own example. But it seems that a ceremony is performed which releases the husband from the prohibition on women having sexual relations with married women.

A widow is looked after by her husband's brother, or by one of her own brothers, she may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his.

Polygamy

A man may have as many wives as he can pay for; one of Stella's men says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and even six have each few wives, and men than two very seldom. Each wife has her own hut in the husband's kraal, and, the first wife on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children.

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own age-set) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A married woman is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uninitiated boy.

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if her husband is at fault, going to one of his age-mates, or, if she is at fault, to her father.

Adoption

In the old days, children captured in war were often adopted, and even today, children of "foreigners" (those who are not Maori) may be adopted, especially in towns of Samoa. Such children become accepted as Maori. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a woman wife may adopt a child of one of her co-wives.

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, and sometimes. The women and girls of the kraal assemble, and when the child has been born they beat on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Stella says till the time when it cuts the two middle lower teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl.

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox; the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, sells the cows. After this, the child is named in the presence of the father and mother

[illegible]

and then old men. It is has not previously received a name. It may have been called by the name of its father's father, but at the naming ceremony it receives a name which may be that of its father or a name not connected with any relative. People are also given nicknames referring to their physical or other peculiarities. There is much ceremony about these names, but every man has a patronymic, consisting of Ifi, "son of," preceding his father's name. This he appears to discard after circumcision. Girls after circumcision may be referred to as Ifan, "daughter of," preceding their fathers' names. At marriage, the husband gives his wife a new name. The practice of nicknaming is a regular feature. Before the circumcision of his other son, a man becomes known as "the father of" the eldest, i.e., if his son is called Sendiu, he becomes Bonyo Sendiu; his wife similarly becomes Ifan Sendiu, the mother of Sendiu.

The name of a dead child, woman, or member is not spoken again, and if the name is an ordinary word, that word is no longer used by the family. Thus, if a man called Ilkwenia, "the gorilla son," died, on his death the word name would be replaced in his family by some such word as *pajiet*, "smooth."

Circumcision (3 months)

Boys' circumcision ceremonies take place at intervals of about three years, and the circumcision period is "open" for about four years. Though the operation may be performed on boys singly or in small groups, the whole number of those circumcised at the same time throughout Mumford forms an associating group corresponding in some degree to the Nandi *mot* (see pp. 31 and 46). Judging by the published accounts, circumcision was a much less prolonged and ceremonious affair than among the Nandi. Before a boy can be circumcised, the father must submit to what is called *ne-ibilwate n-ene*, "the painting of the bees." After making honey-wine, he shows it to a small but suitable bee hotel, dressed as a warrior. After four days, some elders bring him back to his hotel, where he is told to remove the warrior's clothes and become an old man. He can now then be circumcised.

Circumcision begins with the shaving and bathing of the initiate. In the afternoon after this has been done an ox or sheep is killed and eaten by the warriors and elders of the neighbourhood. On the second day, the boy sits a tree called *ei-tim-tim n-ilatin*,* which the girls of the hind carry to the door of the hut (in which the boy sleeps), where it is planted. On the third morning the boy gets up early and sits outside to get cold, after sunrise he is circumcised, the operation being done a Sunday. From the fourth to the seventh day he remains at home, and then goes out, dancing with blacked arrows at the girls, and with other arrows or small sticks which he wears hung from his head. This is his occupation till he has recovered. Among this time he is known as *e-ngolio* and wears the dress of a married woman, including the *e-ewate* cowhide, and an *ewitchatien* on his head. After recovery he is shaved, given weapons and warrior's clothes, and becomes *el-barnak*, "the shaved one," i.e., a junior warrior. Till his head company leaves the manyatta, he lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There are no special times for this. An ox or sheep is killed before the operation. During the period of recovery they are known as *e-ngolio*, and wear on their heads a wreath of the Highlands palm, *el-mirtisiet*, or of grass, instead of an *ewitch* headlet.

Age-sets

Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear type, that is, they do not work in recurring cycles and do not come into existence till they are required. Nevertheless, it is clear from the lists of Kogut (1890), Hollis (1905), and Fadiman (1908), as well as from the Tanganyika age-sets (Hollis, 1911), that some at least of the names are fixed and exact. In 1930 the seven O-Kiaalo

* Forgiven [illegible], normally called *[illegible]*.

Ca. in gms. per 100 gm. dry matter in leaves used by :—

Leaves.	Men and Women.	Leaves.	Women only.	Leaves.	Women in Kitchen.
Mathenge	0·74	Mwangi	1·70	Kibaru	2·41
Gaura	1·36	Mukoto	2·01	Mwangi	2·43
Tigoria	1·40	Nduma	2·40	Mayaya	4·66
Kiuka	4·00				
Average	2·07		2·00		1·96

It has been noted, however, that the tendency throughout the reserve is for men to eat much less of the green leaves than the women do. It is stated that in some districts they eat none. A reason given for this, in a reply to the questionnaire from one of the native chiefs, is that " . . . such food prevented them from being swift of foot if defeated in battle by the Masai."

Estimations of manganese were made in some foodstuffs (Appendix I, Table II). The level in white millet and maize was found to be similar to that found in these foods grown elsewhere, but the manganese content of Kenya green leaves was found to be very much higher than that of edible leaves in this country. The following table shows the nature of the differences found (Richards, 1936) :—

Manganese in mgms. per 100 gms. Dry Matter.

Kenya Samples.		*Home-grown Samples.*	
Red millet	40·19	Oatmeal	6·9
White millet	2·66	Barley	2·61
Green leaves	8·09 to 51·31	Cabbage	1·80
Average	20·0	Lettuce	13·30

The manganese content of plant ash used as a salt substitute was also found to be very high, the values for two samples being 410 mg. and 202 mg. per 100 gms.

(ii) *Salt Substitutes and Mineral Waters.*

The ashes of water plants (Appendix I, Table IV) largely used as salt substitutes by women, especially during pregnancy and lactation, contain significant amounts of calcium and sodium. The average calcium content of seven samples, procured at native markets or in the villages, is 3·4 per cent., and the average sodium content 7·3 per cent. One of the samples analysed stands out from all the others by reason of its high calcium content, which is 10·60 per cent. as compared with values ranging from 1·0 to 1·5 per cent. for the others. This sample was bought at Wandiga's market, and the ash from this market, and that from neighbouring swamps on the Kagumo River, which is probably identical with it, appears to be more in demand than any of the others mentioned in replies to the questionnaire.

/[illegible]/

/[illegible] 1 cont./ husbands. Saliva to which a woman has given birth from that living with another man belong to the husband, even though they also call their genitor father.

They show an immature form when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a potion are used, which are said to be invasive during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

They are accustomed to having intercourse lying on their sides, the woman's upper leg placed over the man's loins. They do not customarily cohabit except at night. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would cause nothing but worm.

Boys and girls slowly begin to practice cohabitation at the age of eight to ten.

It is considered extremely dangerous to touch wind in the presence of women.

V.

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Confinement. -- Parturition in connection with the birth. -- Twins. -- Deformed child. -- Killing newborn children. -- Behavior of the woman in childbed. -- The newborn child. -- Childhood. -- Children's games.

As soon as the woman feels pregnant, the spouses separate until after the coming period, which lasts approximately 1 1/2 to 2 years. Another man may not touch the woman during this period, any more than her husband. This injunction, however, seems to be little

/[illegible]/
observed, since as a rule a new pregnancy ends the nursing period. The pregnant woman observes the ceremonies that she previously knew, in order — as the Maori explain this custom — not to notice them. During the first five months of pregnancy the woman lives as usual with respect to food and drink. Then she is given a broth of hogs' livers, and always cooked with a bitter-tasting root herb (3)

3. From A Maori collectanea.

called *ai mokoroa*, and milk, only the latter during the last month. Through this the woman is supposed to become so exceedingly thin as possible, so that the birth will proceed easier. She may not eat the meat of fallen livestock. The husband during this time need not subject himself to any special diet or special acts, but he may not go to war, for it is believed that he would die on the way. Shortly before the delivery the husband may not leave the house or be somewhere nearby. If he should have a crippled person or even him because of his infirmity, the awaited child would come into the world afflicted with the same defect. /To/ the a successful delivery the pregnant woman prays: "Ng ki nikiki 'ndiduggo ne tiwanei (3)

1. Or as follows:

a "God let come out healthy — the woman," as the unborn child is called. The woman gives birth to her but, which on this day may be entered only by women and girls. A midwife (*ati gatoiyan*, *3 gatoiyan*) provides or performs the necessary assistance. If the newborn child is a boy, the midwife calls out that blood should be drawn from as so as food for the woman to childbed; in the other case, from a heifer. Through this the father also leaves the sea of the newborn child. During the birth process the women who are in the hut or standing around it cry as fast for help and assistance in drill, often plaintive voices. The birth of a boy is more desired than that of a girl, but the greatest joy prevails at the birth of twins, especially if both are boys. In that case the woman often keeps only the first-born child with her, while the second one is nursed by another suitable

[illegible]

[illegible] roots and leaves of a [illegible] (Melanoma [illegible] Warm.). To both is ascribed the effect of promoting the recovery of the birth organs. This is further assisted by putting on a leather body belt (sal gidda, [illegible] gindia) 30 centimeters wide. As a means for strengthening and for increasing the milk secretion, one gives the nursing woman a root decoction of [illegible] (Cissus vesicaria Roxb.) mixed with fat.

[illegible] During the first weeks of life the newborn child, which, incidentally, is often put on the breast soon after birth, is given, besides the mother's milk, a great deal of liquid butter, which during the first eight days even wholly replaces the former in case the child refuses the breast. Later such a child is given [illegible] cow's milk as a substitute for mother's milk, and, to be sure, from a nursing bottle (see figure of goat [Fig. [illegible]]), which consists of a hollowed-out bottle gourd, over whose upper, open end, as a nursing nipple, is tacked a score of leather pierced at the tip. During the suckling the mother is usually seated, while the child lies horizontally on her lap or square beside her on the ground. Since rarely the woman stands and holds the baby on her arm in a sitting position; even more rarely mother and child further lie side by side on the ground. The suckling period, during which the mother is called [illegible], lasts about two years. So end as a rule is conditioned by the coming of a new pregnancy, in that the woman carries a male baby up to the third month of pregnancy, a female one up to the fourth or fifth month. Weaning, for which superstitious considerations are of no importance, comes to pass either in that one removes the baby from the mother, takes it to another but nearby, or the mother makes the breast distasteful to it by rubbing her nipples with the bitter juice of the [illegible] plant. A permanent drying up of the mother's milk is explained by the woman's physical constitution. The woman seeks to

Fig. [illegible]

[illegible]

[illegible] being born he suck secretion by a copious drinking of liquid deep [illegible]. Meanwhile the child is nourished with cow's milk.

[illegible] The pulse in the nerve (of gnaffi) and in the ovarian ligaments [illegible] the woman drink a cow decoction of [illegible] (Cerrio vilus).

[illegible] To [illegible] on abortion, the cow concerned drink a decoction of dried goat faeces or a strong decoction of [illegible] (Cordia monoica) or [illegible] tea. During the subsequent two or three days of convalescence the takes a weak decoction of [illegible] back or one of the bark of [illegible] (Calotrop [illegible]).

[illegible] Concerning fertility, the [illegible] of the [illegible], and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 15. The 47 old women questioned had given birth to 548 children all together, which gives an average of 5.3 confinements for one woman. Of these, 311, therefore 40.3 per cent, were boys, 271, therefore 49.6 per cent, girls. Before their circumcision 34.7 per cent of the children died, including the stillbirths.

[illegible] It should also be mentioned that the motivation of a twin pregnancy is regarded as having arisen through [illegible] conception.

/001 cont./
puty (1).

1. That circumcision among the Israelites -- as is assumed -- attained religious significance only during the Exile is refuted, it seems to me, by the use of the cause Exile in earlier times.

as the Bible often designates it.

Circumcision certainly does not owe its origin to considerations of cleanliness -- as one so often hears -- since the desire for cleanliness could be satisfied more simply in other ways and without an operation not always entirely safe. Furthermore, we also find this custom preferred precisely among those peoples who certainly do not attach any particular value to cleanliness. Moreover, however, I also doubt that /000/ the utility of circumcision in the matter of cleanliness is actually so great. For among the only very scantily clad primitive peoples the part in question is so much more exposed to the effect of dust, etc. and injury by thorns, spiny leaves, blossoms, and grasses that it would be otherwise.

(581) The circumcision of girls among primitive peoples may also be interpreted as a preparation for marriage. Among the Masai, besides the point in time at which it is undertaken, the way of life of the girls before and after the operation argues in favor of this. Clitoridectomy exerts little distortion or cohabitational cupidinous restraint. /Clitoridectomy exerts lessens desire and, in cohabiting, restricts passion./ This has, in the opinion of the people, great advantages for the growing and suckling child, as is also shown by the continence rules of the Masai during pregnancy and the suckling period.

(843) (855)

As we know, the Bible knows of no circumcision of the girls. That such was customary in Egypt, however, even during the oldest Biblical period, is taught by the 19th of the British papyri, in which there is mention of the circumcision of the girl Tawosi, the daughter of Ikehet of Memphis. Here, too, the girls were circumcised at the age of puberty (1).

1. Fiem, "Das Kind in Brauch und Sitte der

/Tell more./

distribution, the rest of the dues are in the hands of his wives, who acquire these dues through the birth of a son. Though this the wives, who have the duty to tend and care for the livestock, are interested in the preservation of the property in the most economic way. This is the one factor of the polygamy of the Masai promoting prosperity with all its advantages for the political economy. The other lies in the fact that many women give birth to more sons for one man than one woman could. Sons, however, make offspring are successors of the parental property. The boy grows up to become a warrior and brings his family the spoils of the numerous raids, through which not only is the herd increased, but, through the supply of new blood, is also improved.

Polygamy among the Masai is therefore a sacred institution. Without it large masses of women would be deprived of their natural occupation, a condition that seems impossible for a primitive people. It is, moreover, a source of prosperity, which, among a culture-poor nomadic people, can only make itself felt favorably for their preservation as a people. From it follows, first of all, good nutrition, which makes the body resistant to the effects of diseases. It corresponds to my observations that among the Masai in general, among adults, fewer cases of death occur as a consequence of illness than is the case among the Negroes living in their vicinity. Also, serious diseases are more infrequent among them than among the Negroes and are milder in their course. The circumstance that abortion is practiced by the women in only very rare exceptional cases also undoubtedly acts to preserve health. One can sufficiently observe the harm that this bad custom has often caused primitive peoples among the native neighbors of the Masai, though indeed there are also exceptions to this. Thus, I met a number of Dorogga women who went through this operation four to six times and cringedly, as well as apparently, without harm.

In contrast to the high fertility there is also a rather high child mortality, though infanticide is entirely unknown. It is definitely beneficial for the child that through work the mother is not kept outside the kraal, but can always remain in the vicinity of the child. The long nursing period of about two years is also advantageous.

/140 cont./

thereto to the child's health, on the other hand, are the poor huts, which are always /141/ filled with dense smoke, and furthermore the lack of cleanliness and the faulty diet. The belief, widespread among all African primitive peoples, that he gives strength and health back to the suffing of the baby, despite all its struggles and screams, with unfavorable quantities of lactose. Pain, as well as stomach and intestinal afflictions, and ailments of the respiratory organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in comparing the blood levels, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, inconsiciously aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age at which the men enter their first marriage is unfavorable for population increase. Until about the 20th or 30th year of life the blood belongs to the warrior standing, and he may marry only after leaving it. This circumstance in turn makes free love, such as exists in the warrior kraals, an understandable social institution. One must judge this arrangement on the soil in which it grows, in order to remain objective. From the racial standpoint we shall have to judge more leniently the free love existing among the married, which, despite extensive restrictions, appears to us like a continuous prostitution of the women. One can in this all the more show through that professional prostitution is excluded here, and consequently the possibility of infection is greatly reduced; this law circumstance is undoubtedly to be regarded as people-preserving. Actually the blood elements that in former times (before the great livestock epidemics) venereal diseases only very rarely occurred. Immorality is rightly regarded as a people-destroying factor, and history teaches us by many examples how licentious and refined sensuality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

In the
/52 cont./ lineage of the El Kiborōn every newborn
85 [613] boy is exposed to an ordeal through which it is supposed to be shown whether or not his begetter belongs to another lineage. In the evening, when the livestock comes home, the child is laid in the entrance of the kraal so that the entire herd of cattle steps over it. If the little one is killed during this or so seriously wounded that it dies from it, it is regarded as a bastard.

846 In most districts the young mother is not obliged to live isolated in the hut for a specific number of days, but leaves it as soon as her condition permits, often the very next day. In others she may not go out of the hut during the first ten days after the delivery, during which time the woman who assisted her then does all the work for her. For four days following the birth neither fire nor household objects may be carried out of the hut. During this time the woman smears her forehead daily with white clay. She does the same when, before the ensuing recovery, before the complete reversion of the genital parts, alone or with the infant, she goes out of the immediate vicinity of the hut or of the kraal. Until the newborn child can walk, the father may not eat any food in its hut and may not enter it during the first ten days after the birth. If he has had sexual intercourse with one of his other wives, he may not touch the baby the next day. If the mother dies during the nursing period, another woman nurses the child, whereby her own children with respect to it enter into the relationship of foster brothers and sisters, regarded as consanguinity, or else it is fed cow's milk by means of a bottle.

854 The newborn baby is given a sleeping place beside that of its mother, whose leather apron serves it as an underlayer. Here the child rests, and, to be sure, on its side, not lying on its back, usually only as long as the mother is sitting beside it and during the night. Otherwise she carries the little one around with her, and, to be sure, on her back as a rule, more rarely straddling her hip or on her arm. The latter way of carrying is customary only with very small children, say during the first month of life. Even while the mother is working, her child remains on her back, held fast by her upper apron. Only if the little one makes its discomfort known by prolonged crying does she hand it to a woman nearby to be quieted or sets it -- if it is somewhat bigger -- on a clean and safe spot on

/52 cont./

854 the ground. The father almost never carries the child on his arm, but only picks it up now and then /53/ for a moment. As soon as the child cries, even at night, the mother, or in her absence another [533] woman, gives it the breast. If this does not help, one tries to quiet the little one or lull it to sleep by rocking it in the arms or by sing-
539 ing. One such familiar lullaby is the following: oh, jejai, tobolo l
854 airorié baba telai l eñg an ai kitok ai; in free translation: Oh, you
533 my little rascal, I say to you, grow and become big in my big kraal. Another song, which, like most songs, first originated during the singing and refers to recent events, runs roughly: "What then do these El mulelyan want here (two women belonging to the tribe of the El mulelyan were standing nearby), they who did not bring the woman in childbed (that is, in this case, the woman singing the song) anything to eat? The Mulelyan are fools because they are not pleased about the children. In the future the woman in childbed will have to sit down in the shade in order not to feel so hungry, or she will /54/ have to ask for food in the kraal of a warrior who brought home booty from a war against the El datua." In the last words there is mockery insofar as the brother of one of the two El mulelyan women, along with other warriors, had been recently driven back by the El

854
[101]

1. The Masai give this name to the inhabitants of the Umbugwe area on the southern end of Lake Manjara.

during an attempted livestock raid.

861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, the mother -- and, to be sure, only she -- strikes the child rather [292] lightly on the training surface with the belt that she wears after each confinement.

855 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aetiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

/345 cont./

182 shareholder, the rest of the shares are in the hands of his wives, who
595 acquire these shares through the birth of a son. Through this the wives, who have the duty to tend and care for the livestock, are interested in the preservation of the property in the most extensive way. This is the one factor of the polygamy of the Masai promoting prosperity with all its advantages for the political economy. The other lies in the fact that many women give birth to more sons for one man than one woman could. Here, however, male offspring are augmenters of the paternal property. The boy grows up to become a warrior and brings his family the spoils of the numerous raids, through which not only is the herd increased, but, through the supply of new blood, is also improved.

Polygamy among the Masai is therefore a natural institution. Without it large masses of women would be deprived of their natural occupation, a condition that seems impossible for a primitive people. It is, moreover, a source of prosperity, which, among a culture-poor nomadic people, can only make itself felt favorably for their preser-
[146] vation as a people. From it follows, first of all, good nutrition, which makes the body resistant to the effects of illnesses. It corre-
[165] sponds to my observations that among the Masai in general, among
[164] adults, fewer cases of death occur as a consequence of illness than is the case among the Negroes living in their vicinity. Also, serious illnesses are more infrequent among them than among the former
182 and are milder in their course. The circumstance that abortion is
847 practiced by the women in only very rare exceptional cases also undoubtedly acts to promote health. One can sufficiently observe the harm that this bad custom has often caused primitive peoples among the various neighbors of the Masai, though indeed there are also exceptions to this. Thus, I met a number of Dschagga women who went through this operation four to six times and allegedly, as well as apparently, without harm.

182 In contrast to the high fertility there is also a rather high child
165 mortality, though infanticide is entirely unknown. It is definitely
854 beneficial for the child that through work the mother is not kept
[847] outside the kraal, but can always remain in the vicinity of the child.
[853] The long nursing period of about two years is also advantageous.

/345 cont./

182 Harmful to the child's health, on the other hand, are the poor huts,
165 which are always /346/ filled with dense smoke, and furthermore
854 the lack of cleanliness and the faulty diet. The belief, widespread
[362] among all African primitive peoples, that fat gives strength and
[853] health leads to the stuffing of the baby, despite all its struggles and
[146] screams, with unbelievable quantities of butter. Soor, as well as
[856] stomach and intestinal affections, and ailments of the respiratory
[164] organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in inspecting the Masai kraals, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, unconsciously aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age
182 at which the men enter their first marriage is unfavorable for popu-
582 lation increase. Until about the 28th or 30th year of life the Masai
836 belongs to the warrior standing, and he may marry only after leaving
837 it. This circumstance in turn makes free love, such as exists in the warrior kraals, an understandable social institution. One must judge this arrangement on the soil in which it grows, in order to remain objective. From the same standpoint we shall have to judge more leniently the free love existing among the married, which, despite numerous restrictions, appears to us like a continuous prostitution
[548] of the woman. One can do this all the more since through that professional prostitution is excluded here, and consequently the possibility of infection is greatly reduced; this last circumstance is undoubtedly to be regarded as people-preserving. Actually the Masai
[164] maintain that in former times (before the great livestock epidemics) venereal diseases only very rarely occurred. Immorality is rightly
182 regarded as a people-destroying factor, and history teaches us by
831 many examples how licentious and refined sensuality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

844 the hut were gathered together the gossips of the kraal, mingling, so far as space permitted, with calves and goats. [845] A number of large calabashes lay in one corner, and a coarsely-made earthen cooking-pot in another. Fleas in thousands skipped about, and the midwives had their time well taken up with the myriads of flies which pertinaciously would insist on cultivating personal intimacy with them.

The anticipated event passed over safely. Indeed, the whole affair was hardly thought worthy of remark, except on the part of the mother, who heard with deep pleasure that her [842] offspring was a boy. Girls are sadly at a discount among the Masai. They would always prefer to have boys, but happily nature sees ahead a little, and takes care that a fair

[133] [342]

MASAI KRAAL, DONYO LONGONOT IN DISTANCE.

supply of girls is provided. As there is no registrar or birth column, I am totally unable to state when our hero first saw 846 the light. That, however, is a small matter. No particular 852 ceremonies marked the occasion, and the happy mother was about next day, attending to her household duties as if nothing unusual had happened, the little stranger being warmly ensconced on her back beneath the bullock's hide which formed the mother's garment.

855 Babies are babies everywhere, and for the first year or two the embryo warrior grappled with the problem of life like a philosopher as he sucked his mother's milk. Then he spoke. Having next found his legs, he grew space. Getting above mother's milk, he was soon exercising his incipient teeth on a huge chunk of beef. Now this was a very reprehensible indulgence on the part of our young friend, for it doubtless

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

produced that unpleasant setting of the teeth which belongs to him in common with the whole of his race. The gums being tender, and the beef tough and leathery, the teeth acquired an outward projection unpleasant to behold, and, what was still worse, they seemed to become separated from each other, till they appeared as isolated fangs. It was noticeable also that his gums were of a very dark blue colour. Neither of these characteristics, however, were any disad- 855

[301]
[304]

EAR STRETCHER AND EAR ORNAMENTS.

vantage to the young Masai, as in his country to be hideous is to be beautiful.

As a boy Moran—for such we may call him for convenience' sake—was pleasing in the extreme—when his mouth was shut. He was the very ideal of an imp, and for diabolical versatility would doubtless have made an admirable page, such as were so much in vogue in former times. At a very early age Moran broke away from his mother's apron-strings, and with miniature bow and arrow aped the bigger boys in their play. As he had no linen to soil, he only roused his mother's laughter if he turned up encrusted with filth. He 857 855 515

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

855 was not even put through the horrors of the tub. Sometimes, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

858 And so life went on, and he was promoted to the rank of a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder, leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

857 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on these occasions conveyed their household gods, though his mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and *vice versâ* in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngăi (God, or the heavens). He heard also that the place of Ngăi was among the eternal snows of Kilimanjaro, or that the thunders of Donyo Ngăi (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the where, whence, and whither of life. We can imagine him appeal-

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 201

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [753]

[1] Amongst the Dinkas it is also customary for the medicine-men to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

Yawning, hiccoughs, sneezing, and illnesses.

When the Masai yawn, they are said to be sleepy. If a small child yawns, his mother grasps his mouth between her fingers to prevent it from stretching and becoming big like the savages' mouths.

If a person has hiccoughs, it is believed that he will eat some meat.

When a person sneezes, he says to himself: 'Somebody is calling me.' If other people are present, they say to him: 'May God make your head hard,' or: 'Have good health.'

When a Masai falls ill, it is said

[1] The thirteen lunar months of the solar year are doubtless thus accounted for.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

83 sweetheart (*e-ansyis*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'atwo* and *en-e-'atwo*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 583 837 The payment of the bridal price authorises a Masai to reckon the children which his wives bear as his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised, [834 835] sexual communism or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his oxen are slaughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 684 If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*e-ar eng-ansyil*).

843 833 [856] A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of 682 684 a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *ol-kishureto*. All the women of the neighbourhood collect together and, having stripped, seize the guilty 833 person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 278 Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Masai*, p. 287. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 7½ years. See *The Masai*, p. 262.

/345 cont./

182 Harmful to the child's health, on the other hand, are the poor huts,
165 which are always /346/ filled with dense smoke, and furthermore
854 the lack of cleanliness and the faulty diet. The belief, widespread
[362] among all African primitive peoples, that fat gives strength and
[853] health leads to the stuffing of the baby, despite all its struggles and
[146] screams, with unbelievable quantities of butter. Soor, as well as
[856] stomach and intestinal affections, and ailments of the respiratory
[164] organs are therefore also the principal illnesses that carry off the babies. If one compares the high mortality among children with the very low one in later life, and if one further considers that, in inspecting the Masai kraals, one finds almost only healthy people full of energy, one cannot resist the thought that the treatment of the children, especially the babies, unconsciously aims at culling out all the weak elements at an early age and preserving for the people only the most vigorous ones that are equal to the demands of life. Seen from this standpoint, that of natural selection, the high child mortality seems less unfortunate. Finally, the late age
182 at which the men enter their first marriage is unfavorable for popu-
582 lation increase. Until about the 28th or 30th year of life the Masai
836 belongs to the warrior standing, and he may marry only after leaving
837 it. This circumstance in turn makes free love, such as exists in the warrior kraals, an understandable social institution. One must judge this arrangement on the soil in which it grows, in order to remain objective. From the same standpoint we shall have to judge more leniently the free love existing among the married, which, despite numerous restrictions, appears to us like a continuous prostitution
[548] of the woman. One can do this all the more since through that professional prostitution is excluded here, and consequently the possibility of infection is greatly reduced; this last circumstance is undoubtedly to be regarded as people-preserving. Actually the Masai
[164] maintain that in former times (before the great livestock epidemics) venereal diseases only very rarely occurred. Immorality is rightly
182 regarded as a people-destroying factor, and history teaches us by
831 many examples how licentious and refined sensuality was one of the grounds that caused the decline of higher peoples. Here among the Masai, however, it is not a matter of this unnatural kind of

Games.

Small Masai children collect pebbles or berries, with which they play at cattle and sheep. They also build huts and kraals in the sand, and they make spears out of bulrushes. Little girls make dolls of the fruit of the sausage-tree[1]. 857 [824]

Big boys play about in the herds of cattle. They choose a quiet animal, and pretend it is a hut. One boy stands by the cow whilst the others go and hide. When the latter return, the one who is standing by the cow chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; anybody who manages to escape and touch the cow has won. This game is called Sambwen.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called 'n-doto. This game is called en-geshei. 524 [887]

The warriors also play this game, but they do not care about it much. They have no boards, and make holes in the earth.

Peace.

If the Masai make peace with other people, whether enemies or other Masai with whom they have fought, the warriors seize two im- 728 628

produced that unpleasant setting of the teeth which belongs to him in common with the whole of his race. The gums being tender, and the beef tough and leathery, the teeth acquired an outward projection unpleasant to behold, and, what was still worse, they seemed to become separated from each other, till they appeared as isolated fangs. It was noticeable also that his gums were of a very dark blue colour. Neither of these characteristics, however, were any disad- 855

vantage to the young Masai, as in his country to be hideous is to be beautiful.

As a boy Mosan—for such we may call him for convenience' sake—was pleasing in the extreme—when his mouth was shut. He was the very ideal of an imp, and for diabolical versatility would doubtless have made an admirable page, such as were so much in vogue in former times. At a very early age Mosan broke away from his mother's apron-strings, and with miniature bow and arrow aped the bigger boys in their play. As he had no lions to sell, he only roused his mother's laughter if he turned up encrusted with filth. He 857 855 515

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12

855 was not even put through the horrors of the tub. Some-
515 times, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

858 And so life went on, and he was promoted to the rank of
291 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
304 leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

●857 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[361] occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[492] these occasions conveyed their household gods, though his
[482] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and *vice versâ* in the wet season. Beyond these studies in practical geo-
869 graphy his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngăi (God, or the heavens). He heard also that the place of Ngăi was among the eternal snows of Kilimanjaro, or that the thunders of
[823] Donyo Ngăi (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock
[516] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the where, whence, and whither of life. We can imagine him appeal-

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

particular relation. The naming ceremony is as follows :—When the child can run 553
about a *small* ram is chosen and killed by the women of the village and eaten by them (and not by any men). The child is then given a name which is chosen by the assembled women. It is usually named after some friend of the family either living or deceased, and great care is taken that the person after whom the child is named is (or was) good-looking and of good character, as otherwise the child would grow up ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own name (except by his family). After a man is married and has named sons of his own he is called "Father of 'so-and-so.'"

Teeth Extraction.—As soon as a child of either sex has cut all its milk-teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the permanent teeth grow. There is no ceremony attached to this removal of the teeth, [852]
which is performed with a small, sharp two-edged knife. The reason given for this [912]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [758]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced in the cartilage round the upper part of the ear, and as soon as the boys start herding cattle and the girls start drawing water they have the lobes of the ears pierced. Ears are pierced in order to prepare them for carrying ornaments, and the holes are stretched to the size which the individual requires by means of a gradual increase in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is restricted 262
to milk, fat, and meat, as no crops are grown.

PART II.—BOYHOOD.

Herding.—As soon as they are considered old enough (and this depends upon the 857
number of other boys in the family available for this work), boys are sent to help herd the sheep and cattle, and they continue to do so until they are old enough to start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it 836
is not considered in any way wrong for these boys to begin indulging sexually as soon 883
as they like, provided that they observe certain restrictions. They may do as they 684
like with the younger girls in the neighbouring villages, provided, of course, that they [834]
observe the law forbidding sexual relations with any member of their own sub-clan,

Kenya

Summary of Warriorhood.

From boyhood upwards to the Elders' stage there are the following recognized steps, each with appropriate "rites de passage," except in the last stage. 561

(1) *Candidate Stage.*—After the boys have attained puberty, as shown by the first signs of hair growth on the face, they form bands who wander about the country receiving presents, and finally there is the horn-seizing ceremony, after which the candidates are circumcised and enter the novice stage. [881]

(2) *Novice Stage.*—No sex life is permitted to novices, who during their novitiate wander about with bows and arrows shooting birds for head-dresses. This stage is concluded by a head-shaving ceremony, after which the novices enter full warriorhood.

(3) *Junior Warrior Stage.*—This is a period of roughly nine years from the end of the novitiate. During this time—with certain exceptions—no warrior may shave the hair off his head. Life is in the *manyattas*. This period is concluded by the *Eunutu* ceremony and a general head-shaving which marks the entry into the senior warrior stage.

(4) *Senior Warrior Stage.*—Warriors remain in this class until there are two age-groups in it, and then transfer to the Elders' group. Transfer from the senior warrior stage to the Elders' stage cannot take place unless there are two age-groups ready to move up together.

PART IV.—GIRLHOOD.

Work.—As soon as girls are old enough to do so, at the age of about seven, they start helping their mothers and sisters in the general work of the village, sweeping out the huts, milking the cows, nursing the children, drawing water and sewing skins. There is, however, one sort of work which is never done by any uninitiated girl, and that is getting firewood. This work is specially reserved for married women. The girls' work may either be in the home village or else in a warrior's *manyatta*, should they have brothers living in a *manyatta*. 857 [313 581]

Sex Life.—From a very early age indeed the young girls imbibe the general atmosphere of Masai sex life. As already mentioned, those of them who have brothers living in the *manyattas* sleep from a very early age—long before puberty—on the same beds as couples indulging in sexual intercourse; and even those girls who live in the home villages learn all about such matters at a very early age owing to the fact that they always sleep on their mother's bed. As soon as ever the first signs of puberty are noticeable, girls may be asked by the warriors to sleep with them, and the question of whether there is complete intercourse or not rests then entirely with the girls. Moreover, the uninitiated boys, and especially those who tour the villages as candidates for initiation, expect any young girls who are not already 864 883 836

1. The Masai give this name to the inhabitants of the Umbugwe area on the southern end of Lake Manjara.

during an attempted livestock raid.

861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, [292] the mother -- and, to be sure, only she -- strikes the child rather lightly on the training surface with the belt that she wears after each confinement.

855 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aetiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

/54 cont./

857 524 together. They build a small hut about a foot high in the customary shape, and, since they themselves cannot get into it, they place a few little stones in the doorway as their children. A pile of the aforementioned Solanum fruits represents their stock of cattle and donkeys, and another one of small stones signifies their herd of goats and sheep. Small pieces of wood represent the calabashes and other household equipment. The boy now drives the livestock to pasture, while his little wife cooks the food. Then he returns /55/ home and the two eat together. Meanwhile they decide that the pasture is no longer good and they must move on. But the Solanum "donkeys" are unable to carry the things, so they quickly tie a bast string to a piece of dry cow dung and thus make a sledge. Then everything is piled on it and the journey starts. In a few minutes the sledge is broken

857 526 and the game is over. If several boys are together, they like to play war. They divide up into two, three, or four parties of equal strength, and each builds its kraal out of twigs, in which the livestock, as previously described, finds its place. Then the parties make surprise attacks on one another, the one steals the livestock of the other, the latter pursues the victor in order to recover the booty from it, and so on, until a few blows falling too roughly end the game, and it degenerates into a little row. Small boys often go out hunting with sharpened sticks and small bows and arrows for lizards, rats, and similar animals. They are then very proud over a success, and dance, sing, and boast, as they see this done by the warriors when they come back from an expedition. In the last two or three years before circumcision a fight for a piece of meat set out as a reward for the winners represents the favorite game of the boys. Two opposing parties fight over it, armed with sticks.

145 Puberty sets in at about the age of 12.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
[343] dividual ones. Thus everyone remains responsible for the barricading
[672] of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on ac-
701 count of the lack of milk. Milk is the only food that the Ol morani
262 takes in the kraal, and the lack of it is therefore especially grievous.
264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e buli) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

/173 cont./

233 [561] [857] Small livestock and donkeys are tended by little boys, cattle by older boys, under the supervision of a few old men. Dogs are no longer used for this now; rather the livestock heeds the whistle or call of the herdsmen. To what extent this is the case is best demonstrated when Masai flee with herds of livestock. A number of men, shouting and whistling, run before and behind the herd, [231] [178] which rages across the steppe in a mad chase. In former times the herdsmen quite generally used dogs. The dogs did not serve so much to keep the herd together, but more for guarding. They announce the approach of predatory animals by barking or by hastening to the herdsmen.

231 [262] [272] /174/ As has already been mentioned above, fresh livestock blood alone or mixed with milk forms a food prized as quite particularly nourishing. The blood for this is drawn off the living cattle and goats in the following manner: A strap is tied around the animal's neck in such a way that the blood returning to the heart in the large vein is blocked by it and breathing is not affected. Then a man [411] [415] shoots an arrow (Fig. 76) with a bulb-shaped, thick tip (ol ñoret), from which projects a seale-shaped sharp piece of sheet iron six to eight millimeters long and equally wide, into the swollen vein, whereupon the blood squirts out in a stream and is caught in a gourd bottle (ol buguri). The bleeding is stopped by a simple untying of the strap after the operation is finished. From a strong bull or ox approximately four to five liters of blood are drawn at one time, from a cow only half as much, and this is repeated every month. No blood is drawn from good milch cows and cows with young calves. Blood is drawn from sheep by means of an incision in the depression above the eyes or between the eye and the middle of the forehead. The slaughtering of cattle is done by a stab in the neck after the front and hind legs have been fettered; goats and sheep are suffocated by having their mouths and noses held shut. Cows are never slaughtered, not even when they are too old to be used for breeding. 231 Livestock that has died is eaten. As soon as the animal is dead, one 262 removes the skin from the neck, severs the neck veins, and catches 561 the blood flowing out in the skin. The cutting up of a head of cattle is done with the greatest care; almost every single muscle is carved

Figure 9.

Young Masai herd boys at a water hole on the floor of the Rift Valley in Tanganyika. Mt. Lengai, East Africa's only active volcano, is in the background. The view is north with the western wall of the Rift out of the picture to the left.

••• for Tanganyika.

561 181 (b) Age grade: The age grade system is of great importance in the life of a Masai man, since it regulates his conduct toward other men and women and is the baisis for the political organization of the tribe. The system is also of significant use in dating past events (Fosbrooke, 1954).

721 181 Warfare was of great importance to the Masai prior to the 1900's. The whole social organization of the tribe was built around the production and maintenance of an effective fighting force. Although actual fighting is relatively rare now, the customs and social organization remain basically the same.

• 857 *233 881 561 701 Until his early teens the primary duties of a boy are herding livestock (Fig. 9). Roughly every seven years there are a series of ceremonies culminating in a circumcision ceremony. This ceremony is taken by all the young men of the correct age (roughly in their mid teens), and it produces a class of warriors each of whom is known as ol-murrani, or moran. This is considered the most important occasion in the life of a Masai man, and from then on he is a full member of the tribe. Each group to be circumsized is given an age

[See p. 53.--Analyst]

701 the principle was that the meat and blood strengthened
[826] the warriors for fighting. We periodically came upon
[252] moran cooking fresh meat. It was usually goat or sheep, although occasionally bovine, and they cooked it either by skewering pieces on green limbs which they held over the fire, or by placing the strips of meat on a wooden
[857] grill above the fire. Youngish children usually
701 accompanied the moran. Gower (1948b:79) notes that in
562 Tanganyika Masailand:

> At an olpul a few moran (warriors) will go into the bush and slaughter a bullock or goats. They take with them a few uncircumcised boys and girls. They camp in the bush for any period from 10 to 30 days, depending on how many bullocks they have to slaughter. For the first few days they eat the meat roasted and cooked; thereafter they subsist on soup. The Masai consider that this diet gives considerable strength.

We never observed moran cooking meat far out in the bush. Usually these feasts were close to a boma.

We were told that eland and buffalo were considered close enough to cows to be proper food for Masai and this was also postulated by Grzimek and Grzimek (1960a)
562 and described by Huntingford (1953:109). The women
[843] apparently could eat game meat, especially gazelles, during pregnancy. From the reception of the meat we brought to bomas, we believe that in addition to women and children elders and a few moran will gladly

#233 head. Each herd was stopped several hundred yards from the water hole. The herds were watered in the order of arrival, the first herd moving up to the hole, small groups drinking as above, then leaving and its place taken by the next herd.

#233 554 <u>Numbers of Animals</u>: The emphasis of the Masai is on numbers of animals, not on quality, and certainly not on any balance between numbers of animals and range productivity. The animals represent wealth in the broad sense. Goats, sheep, and occasionally cattle are traded for goods or sold. A certain number of cows are required for milk production. Beyond that, however, the Masai appear to regard cattle as a combination of status symbol, bank account, and object of reverence. The more cattle they have the better, and they see no point in selling cattle or trying to upgrade the cattle for that purpose. They do appreciate good livestock. [857] Young boys often have a steer which they raise from a calf. They attach great importance to the condition of this animal. Still, wealth and status appear to be measured in terms of numbers of cattle, whatever their condition. Any effort to reduce these numbers seems to them a scheme to undermine their way of life.

#178 233 In former times the limiting factors mentioned

*233
*136
224

Masai youths and young Moran may spear any passing animal, possibly to test their skill, but this probably involves relatively few animals in total. It does affect the animals' reactions to the Masai. A Masai driving some livestock, even one cow, is apparently virtually ignored by most wild animals. We watched one Masai drive a lone cow through a herd of 335 wildebeests and 115 zebras. The herd eddied about him at a distance of 20 to 40 yards, and for about a mile he appeared almost a part of the herd, all moving along at about two to three miles per hour. We often saw wild animals grazing in close proximity to Masai livestock and herders. A lone Masai with a spear and no livestock is something else again, and most wildlife will stay nearly 100 yards away from such a person.

* 857 Masai boys play a game "marking" wild animals. They try to catch young of various species and notch the ears in the same manner as they mark their cattle. Later, when observing the same marked animal they say that it is "my animal." We captured a wildebeest with notched ears in Ngorongoro Crater and a nearby Masai said that it was his wildebeest as he had cut the animal's ears when it was a calf.

232
825 As noted above Masai try to avoid wildebeests

FL12 Masai FL12

855 was not even put through the horrors of the tub. Some-
515 times, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

858 And so life went on, and he was promoted to the rank of
291 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
304 leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

857 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[361] occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[492] these occasions conveyed their household gods, though his
[482] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and *vice versâ* in the wet season. Beyond these studies in practical geo-
869 graphy his education proceeded in a very irregular fashion. He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngăi (God, or the heavens). He heard also that the place of Ngăi was among the eternal snows of Kilimanjaro, or that the thunders of
[823] Donyo Ngăi (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock
[516] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the where, whence, and whither of life. We can imagine him appeal-

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ing to his father to learn something about his origin, and 869
this I believe is—among other stories—what he was told.
The primal ancestor of the Masai was one Kidenoi, who 869
lived at Donyo Egèrè (Mount Kenia), was hairy, and had a 773
tail. Filled with the spirit of exploration, he left his home
and wandered south. The people of the country, seeing him
shaking something in a calabash, were so struck with admi-
ration at the wonderful performance that they brought him
women as a present. By these he had children, who,
strangely enough, were not hairy, and had no tails, and
these were the progenitors of the Masai. As Moran had
not heard anything of the theories which were convulsing
scientific Europe and America, he remained ignorant of the
fact that he had struck upon an interesting legend which
the *savants* of civilized society would have given their beards
to verify.

Meanwhile Moran practised with the spear, and killed 858
innumerable imaginary enemies. He listened intently with
beating heart to the stories of daring cattle-raids and san-
guinary fights, but as yet he could only dye his spear in the
blood of an antelope, or, it might be, of a buffalo. His food [262]
still continued to be that of a non-fighter, namely, curdled
milk, maize, or millet, and meat. But vegetable paste was
the meat of women and children, and he loathed it, though
he ate it.

As he approached the age of fourteen he began to develop
a truculent and ferocious expression, instead of making
himself sick in the attempt to smoke a cigar, or examining
his upper lip in the glass, as a lad of proper spirit in England
would have done at the same age. It is quite laughable to
think of Moran trying to look dangerous, pursing his brow,
and generally cultivating the fiendish. And really, I am
told he was the admiration and the envy of all the Lèon
(boys) of the district, and quite won the hearts of the girls.

At last it was agreed that Moran had become a man, and 881
was fit to be a warrior. A certain rite, better known in
Africa than in Europe, was performed; and Moran was no
longer a boy, he was an El-moran—a warrior. His father,
who was wealthy, resolved to rig him out in the height of
military fashion. For this purpose they journeyed to a [563]
neighbouring settlement of Andorobbo—a clan who are
despised heartily by their distant relatives, the aristocratic
Masai, on account of their ignoble mode of gaining a livelihood
by the chase. After making the Andorobbo quake in their [714]

1. The Masai give this name to the inhabitants of the Umbugwe area on the southern end of Lake Manjara.

during an attempted livestock raid.

• 861 The child is probably never beaten before it is at least two years old. But even at an older age beatings are very rare and then never cruel. Boxing the ears or blows on the head are generally forbidden because they might injure the health. If correction is necessary, the mother -- and, to be sure, only she -- strikes the child rather [292] lightly on the training surface with the belt that she wears after each confinement.

855 As soon as the children are weaned, they are left to themselves the whole day and, appear in the maternal hut only for eating, drinking, and sleeping. They develop rapidly, are lively, bright, and often quite pretty, if their faces are not marred by running eyes. The latter is very common, for the countless flies in the kraals prefer to settle on the nostrils and eyes of the children. It is only natural that they quickly lose their childish innocence, if one pictures the 857 life that surrounds them. There is a time, however, when they still 524 enjoy naiveté and amuse themselves with childish games. Little girls like to play with dolls or also "cooking." A foot-long fruit of the Kigelia aetiopica, similar to a liver sausage in appearance, is the doll. Sometimes it is carried on the back, sometimes held at the breast, then anointed with water or earth, in place of fat, or, with the assumption that it is crying, rocked in the arms or on the back. For cooking, they make themselves small clay pots out of the clay of the termite hills, place them on three small stones, and fill them with grass and leaves, which are supposed to represent their favorite foods. They also imitate the grinding of flour by rubbing sand between two stones. With the fruits of the Solanum campylacanthum they play at catch in twos or by turns, whereby the one who drops the "ball" must let the other drink a couple of swallows of milk out of his gourd bottle. Boys and girls also play "husband and wife"

/109 cont./

• 861 A father reprimands his disobedient child with the words eñ gulugoni eñ gob, that is, you are like a piece of earth or dirt, or eñ dian eñ gob, dirty fellow, or ol soid eñ gob, dirty stone.

578 Invectives and curses are:

192 ol meneñani (or eñ meneñani) = skeleton, as remains of a decayed corpse:

ol ag' ischobo (Eñg ai eñ abiak, which means may God give you the serious sickness "abiak":

es sûti = dirt, dust, that is, if only one could sweep you out of the hut like the dirt:

ol agaescherteta = fall down:

ol agaua 'Ng ai, that is, may 'Ng ai take you away:

ol agatobóro ol asurai = may the snake bite you:

ol againasia ol ugaru = may the lion devour you:

ol agatadoijirik eñg olon = go away along with the sun:

ol agóimiso or redji = may your footprints be lost, that is, may you disappear entirely.

Bantering expressions that may sometimes be meant rudely are used by boys and youths to one another:

/110/

ol orobó ñ otonji = accumbens matri /one who lies with his mother/:

ol orobó eñg arnasche = accumbens sorori /one who lies with his sister/:

hai, eñg inobi = hi, anus (neutrius generis) /these old fogies (neutral in gender)/:

hai, ol goroon = nates /buttocks/.

The last two are used teasingly both by young girls to the warriors and the latter among themselves. Furthermore warriors insult one another with ol kiregen = accumbens uxori alienae /one who lies with another's wife/; and ol sinoni = scorned by the girls, ol orobó eñg ikau énje = accumbens filiae maximae natu /one who lies with his oldest daughter/, ol orobó 'ng abedani = accumbens matri uxoris /one who lies with his wife's mother/. If a married man were to use
[593] toward his wife such vulgar invectives that had reference to her parents,
[586] the latter -- according to the assurances of the people -- would immediately take their daughter back and return the bride price to the man.

/123 cont./

201 152 A threatening with blows, just like the energy of a blow is indicated with a snacking sound that the index finger mapping down on closed thumb and middle finger of the right hand produces, a movement that is executed from the wrist and to a lesser extent also from the elbow and is sometimes observed among us as an involuntary reaction after taking hold of an unpleasantly hot object, or also among snuffers after taking a pinch. Besides this gesture one also finds another, the mapping of the middle finger from the tip of the thumb on the ball of it, common among us. Often this expresses a higher degree of threat, a threatening with weapons. On the other hand, however, one also finds it as an expression of embarrassment, whereby at the same time the shoulders are drawn up.

If the Masai wishes to emphasize emphatically that something is altogether at an end or gone, that nothing is left of it any more, he runs his thumbnail directly behind the edge of his upper incisors and pushes it quickly forward with a mapping sound.

201 861 I observed repeatedly how mothers reprimanded their naughty children, in that they accompany their ene el eigunikuby ek ehiak, that is, go, or things will go badly with you! with a motion of the hands, which consisted of her rapidly paming the palms of her hands, turned toward each other, half clapping, half grazing, and, to be sure, the right hand, chiefly active in this, would be mapped forward from behind.

151 /124/ The strength of vision of the Masai, like that of other primitive peoples, is very good. Often they already saw objects in the landscape at distances at which a normal-sighted European could not yet discern anything. The author was particularly struck by the fact that the people were able to recognize an object seen at great distances better than the Europeans, even such whose eyes, through many years' residence in the country, were accustomed to the peculiar forms of vegetation and lighting effects in the steppe. When the latter was in doubt as to whether it was a matter of, for example, a man or a tree stump, or of a termite hill or a large antelope, the Masai's power of recognition always proceeds to be the better one. [204] That they have at their disposal a tolerable judgment of distance is

775
825
826
613

/310 cont./
Allegedly they never bite the El kiboron people; on the other hand the latter often use them as frightening devices against both Masai and Negroes.

796 The Masai are not familiar with devils, but indeed with the -- male -- demon Ngwaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults Ngwaunir is merely a bogeyman for naughty children. "Do not go too far away," the mother says to the children, "otherwise Ngwaunir will get you."

[K.1]

754 If a person brings misfortune, illness, or death to another through sorcery (ol ohiki), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and the execution of special gestures. The aforementioned amulet ring (ol gwenti) protects one against the effect of magic made by another Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /311/ roots, barks), after which they are named, and a secret medicine of the ol gotatiki, who alone is able to prepare the whole in such a way that it is effective. The legumejig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women heroes up to then in connection with the boys' ol gobiks feast. The ol gogunt is tied around the ankle and protects one from ailments of the leg. The ol dargef is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The ol ayeg protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

789

[751]

/198 cont./

846 757 roots and leaves of e'mĕtá (Malesma indicum Wettst.). To both is ascribed the effect of promoting the recovery of the birth organs. This is further assisted by putting on a leather body belt (en gitádi, ni gitadin) 20 centimeters wide. As a means for strengthening and for increasing the milk secretion, one gives the nursing woman a root decoction of ol asasiai (Osyris tenuifolia Engl.) mixed with fat.

853 During the first weeks of life the newborn child, which, incidentally, is often put at the breast soon after birth, is given, besides the mother's milk, a great deal of liquid butter, which during the first eight days even wholly replaces the former in case the child refuses [415] the breast. Later such a child is given /199/ cow's milk as a substitute for mother's milk, and, to be sure, from a nursing bottle (em bugurí en gerai [Fig. 80]), which consists of a hollowed-out bottle gourd, over whose upper, open end, as a sucking stopper, is turned a screw of leather pierced at the tip. During the sucking the mother is usually seated, while the child lies horizontally on her lap or squats beside her on the ground. More rarely the woman stands and holds the baby on her arm in a sitting position; even more rarely mother and child further lie side by side on the ground. The suckling period, during which the mother is called en domononi, lasts about two years. Its end as a rule is conditioned by the onset of a new pregnancy, in that the woman nurses a male baby up to the third month of pregnancy, a female one up to the fourth or • 862 fifth month. Weaning, for which superstitious considerations are of no importance, comes to pass either in that one removes the baby from [853] the mother, takes it to another hut nearby, or [415] the mother makes the breast distasteful to it by → rubbing her nipples with the bitter juice of the os suguroi aloe. A premature drying-up of the 853 mother's milk is explained by the woman's physical constitution. The woman seeks to

Fig. 80. (1/6)

/375 cont./

824 [951] 452. os sinande. Secret medicine of the ol oiboni; ingredient of amulets that are supposed to protect one against wounds, sickness, and accidents.

453. os sinóni (Lantana salviifolia Jacq.). With the wood, /376/ whose smoke smells pleasant, one fumigates the gourd bottles to remove the unpleasant odor arising in them through use.

454. es sisiní (Corchorus trilocularis L.). Good fodder for cattle, goats, and sheep.

455. es sisiní (Schwabea esbolioides Lind.). Small-livestock fodder.

456. os sisiwet (Ocimim filamentosum Forsk.). Women like to use the bush as padding for the bed, on account of its plesant peppermint-like smell.

457. os siteti (Grewia bicolor Juss.). Fruits are edible. The straight, long, and very thin sticks that older men always carry with them are made from the branches. Pregnant women drink a tea made from the leaves, which has a laxative effect.

458. os sobugét (Dombega).

459. os sodio (Euclea fructuosa Hiern). Approximately one tablespoon of scraped root bark, mixed in honey beer, is taken as a strong laxative for pain and swelling of the spleen.

460. os sogonoi is an older large tree, which, in the younger stage, is called en doroniki. Its bark is used like that of the last one, but its effect is less vigorous.

[301] 461. os sóngoio (Indigofera spec.). The warriors make fragrant neckbands out of the bark bast.

[862] 462. os suguroi (Aloe). If the child is to be weaned, the mother smears on her nipples the bitter juice of the fleshy leaves and thus makes the breast repugnant to the baby. People who like to drink a great deal of honey beer steep in it two pieces of wood a hand-span long, which has been previously pounded with a club. This addition is supposed to prevent both the indisposition from carousing and an upset stomach. A piece of root is put in the fermenting honey beer for hastening the fermentation.

463. os sugurtuti = ol dinjai (Cissus quadrangularis L.).

464. os sumatégi (Embelia kilimandscharica Gilg). Edible fruits.

Summary of Warriorhood.

From boyhood upwards to the Elders' stage there are the following recognized steps, each with appropriate "rites de passage," except in the last stage. 561

(1) *Candidate Stage.*—After the boys have attained puberty, as shown by the first signs of hair growth on the face, they form bands who wander about the country receiving presents, and finally there is the horn-seizing ceremony, after which the candidates are circumcised and enter the novice stage. [881]

(2) *Novice Stage.*—No sex life is permitted to novices, who during their novitiate wander about with bows and arrows shooting birds for head-dresses. This stage is concluded by a head-shaving ceremony, after which the novices enter full warriorhood.

(3) *Junior Warrior Stage.*—This is a period of roughly nine years from the end of the novitiate. During this time—with certain exceptions—no warrior may shave the hair off his head. Life is in the *manyattas*. This period is concluded by the *Eunutu* ceremony and a general head-shaving which marks the entry into the senior warrior stage.

(4) *Senior Warrior Stage.*—Warriors remain in this class until there are two age-groups in it, and then transfer to the Elders' group. Transfer from the senior warrior stage to the Elders' stage cannot take place unless there are two age-groups ready to move up together.

PART IV.—GIRLHOOD.

Work.—As soon as girls are old enough to do so, at the age of about seven, they start helping their mothers and sisters in the general work of the village, sweeping out the huts, milking the cows, nursing the children, drawing water and sewing skins. There is, however, one sort of work which is never done by any uninitiated girl, and that is getting firewood. This work is specially reserved for married women. The girls' work may either be in the home village or else in a warrior's *manyatta*, should they have brothers living in a *manyatta*. 857 [313 581]

Sex Life.—From a very early age indeed the young girls imbibe the general atmosphere of Masai sex life. As already mentioned, those of them who have brothers living in the *manyattas* sleep from a very early age—long before puberty—on the same beds as couples indulging in sexual intercourse; and even those girls who live in the home villages learn all about such matters at a very early age owing to the fact that they always sleep on their mother's bed. As soon as ever the first signs of puberty are noticeable, girls may be asked by the warriors to sleep with them, and the question of whether there is complete intercourse or not rests then entirely with the girls. Moreover, the uninitiated boys, and especially those who tour the villages as candidates for initiation, expect any young girls who are not already 864 883 836

/50 cont./

837 [851] /footnote 1 cont./ husbands. Babies to whom a woman has given birth from thus living with another man belong to the husband, even though they also call their genitor father.

847 They abort an immature fetus when the woman has been made pregnant by another who is sick or old or feeble. Remedies in the form of a potion are used, which are said to be innoxious during the first two months of pregnancy. After two months of pregnancy they wait for parturition and kill the newborn child.

833 They are accustomed to having intercourse lying on their sides, the woman's upper knee placed over the man's loins. They do not customarily cohabit except at night. They are afraid of coitus in daylight, lest the man's blood transferred to the vessels of his wife would retain nothing but water.

[864] Boys and girls already begin to practice cohabitation at the age of eight to ten.

514 It is considered extremely shameless to break wind in the presence of women.

V.

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Confinement. -- Festivities in connection with the birth. -- Twins. -- Deformed child. -- Killing newborn children. -- Behavior of the woman in childbed. -- The newborn child. -- Childhood. -- Children's games.

843 853 183 As soon as the woman feels pregnant, the spouses separate until after the nursing period, which lasts approximately 1 1/2 to 2 years. Another man may not touch the woman during this period, any more than her husband. This stipulation, however, seems to be little

561 /77 cont./
701 Mixed, light colors are the symbol of fickleness, frivolity, flighty,
702 childlike, and childish sentiments; they are not proper for adult men
152 with a serious conception of life. The festival lasts about a month
• 865 as a rule. During it the youths practice handling the weapons, tell
[822] each other gruesome war stories, which they have heard from warriors
or invented themselves, and thus stimulate their imaginations, just as
the reading of Indian and pirate stories does this on occasion among
[276] European boys. They artificially make themselves positively wild,
to which also the taking, still strange to them, of various roots and
barks with a nerve-stimulating effect (which will be discussed later),
which they add to the cooking meat, contributes a great deal. All
their yearning is directed toward war and murder, everything in them
is pressing toward killing an enemy, and enemies for them are all non-
Masai. Each of them would like soon to be no longer an ebor alem =
[721] white, that is to say, not yet dyed with blood, sword. Not infrequently
they turn against defenseless caravans if such happen to be in the
vicinity. Whether or not spoils are to be taken in this is of no im-
portance, only killing and murdering, they do not think any further.
Many attacks on caravans have come about in this way. Such op-
portunities, however, are always rarities for individual troop of youths.
561 The rule is a war expedition against a sedentary tribe. After the
701 fighting, the el barnot again return to the paternal kraal to live there
702 a few more years. During this time they attach themselves more and
[721] more closely to the warriors, in order to learn from them and to im-
prove themselves in the art of war. They accompany the warriors on
their raids and now and then also take part in their forest meals.
Nevertheless they do not gain admittance into the warrior kraal,
which is just as wounding to their self-confidence as the circumstance
that they are looked down upon by the warriors and treated almost
like boys. The wish to be on an equal footing with the warriors grows
ever keener in them. But they still lack two things for that: the
name for their age class and the shield escutcheon.

561 In order to request the bestowal of the former from the ol oiboni,
[791] a gathering (eñ giguana) (1)

1. Any gathering for a consultation is called this.

/62 cont./

881 in a long leather apron reaching to the feet (ol gelá, el gelâni),
[292] which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before sunrise at a place in the vicinity of a kraal, chosen by the three or four operators needed each time. The warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pour cold water over each other, in order to become numb. The operation,
[752] which is professionally performed by old men, especially Wandorobo,
[887] is the following /the following paragraph has been translated from the Latin of the original source/:

881 After the outer skin of the penis has been drawn back and the
304 inner lamella of the foreskin nearest the back of the glans has been cut around with a knife, the glans lies in an elongated sheath, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an uvula (1).

1. The following should also be mentioned here /the rest of the footnote has been translated from the Latin/: In order to look cut (circumcised), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "ol jugi." The swelling glans prevents the foreskin from sliding forward.

[412] /63/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs apart on the leather apron spread out on the ground. After it, the wounded part
[752] is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who strides backwards for this, into his mother's hut and is poured on the ground there. An agent to stanch the blood is not used. During the circumcision
[866] itself the parents of the boy remain in their hut, for if the latter
[626] moans or cries out from the pain, they are punished with abusive

881 /63 cont./
[304] words and blows by the assembled warriors, because they did not
[866] rear their son to have the hardening and self-control necessary for
[626] a warrior, while the weakling is reviled for a long time afterwards as ebiryo = coward, or tŏrónō = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are
[372] regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (Juniperus procera). The festival is called ol ogŏr l el aijok amerăte,
[252] that is, the festival of the circumcised boys. Unbelievable amounts (1)
[262]
[261]

1. I once observed that my four Masai boys together at an evening meal ate over 80 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take
[522] some fresh milk. People joke and laugh and everyone seems to
[521] want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which
881 the budding warriors will augment the paternal herds. Suddenly the
626 glances of a few who had just been joking darken and turn toward
152 a distant hut at whose door a solitary old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their imprecations into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

6: Thomson K-3 (1883-1884)1887

855 was not even put through the horrors of the tub. Some-
515 times, however, his mother, in a fit of affection, and imbued with the belief that some day he would make a name for himself as a smasher of skulls and a lifter of cattle, would make up an unctuous and odoriferous composition of grease and clay, and anoint him therewith till he shone forth with a splendour dear to the Masai heart. On these occasions he would strut forth with all the pride proper to a small boy who has just had a suit of new clothes.

858 And so life went on, and he was promoted to the rank of
291 a boy proper. He was provided with a real bow and arrow. A square piece of sheep-skin was tied over the left shoulder,
304 leaving the legs quite bare. He now began to cultivate, not a moustache, but his ear-lobes; that is to say, he took means to stretch them out till they would almost touch his shoulder, and he could nearly put his fist through the distended portion. This is done by first putting a slender stick through the lobe, and gradually replacing it by a bigger, till a piece of ivory six inches long can be inserted lengthwise.

857 Our hero now looked longingly forward to the day when he should be a warrior; but meanwhile he must employ himself herding the goats and sheep. This was his first
[361] occupation. He had by this time acquired some notion of the geography of the country around, as his parents had not been stationary, having been compelled to move about from place to place according to the pasturage. The donkeys on
[492] these occasions conveyed their household gods, though his
[482] mother had to carry nearly as much, and build the hut after. He had also to accompany his parents in moving up from the plains to the highlands in the dry season and *vice versâ* in the wet season. Beyond these studies in practical geography his education proceeded in a very irregular fashion.
● 869 He learned something of the mystery of the universe by hearing his elders continually howl out prayers by the hour together to some unseen Being called Ngăi (God, or the heavens). He heard also that the place of Ngăi was among the eternal snows of Kilimanjaro, or that the thunders of
[823] Donyo Ngăi (an active volcanic mountain) were His voice.

It is very pleasing to think of Moran at this period reclining under a bush or standing watchfully over his flock
[516] with one foot brought up to his knee and supported by his bow, trying to penetrate the great problem as to the where, whence, and whither of life. We can imagine him appeal-

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ing to his father to learn something about his origin, and 869
this I believe is—among other stories—what he was told.
The primal ancestor of the Masai was one Kidenoi, who 869
lived at Donyo Egèrè (Mount Kenia), was hairy, and had a 773
tail. Filled with the spirit of exploration, he left his home
and wandered south. The people of the country, seeing him
shaking something in a calabash, were so struck with admi-
ration at the wonderful performance that they brought him
women as a present. By these he had children, who,
strangely enough, were not hairy, and had no tails, and
these were the progenitors of the Masai. As Moran had
not heard anything of the theories which were convulsing
scientific Europe and America, he remained ignorant of the
fact that he had struck upon an interesting legend which
the *savants* of civilised society would have given their beards
to verify.

Meanwhile Moran practised with the spear, and killed 858
innumerable imaginary enemies. He listened intently with
beating heart to the stories of daring cattle-raids and san-
guinary fights, but as yet he could only dye his spear in the
blood of an antelope, or, it might be, of a buffalo. His food [262]
still continued to be that of a non-fighter, namely, curdled
milk, maize, or millet, and meat. But vegetable paste was
the meat of women and children, and he loathed it, though
he ate it.

As he approached the age of fourteen he began to develop
a truculent and ferocious expression, instead of making
himself sick in the attempt to smoke a cigar, or examining
his upper lip in the glass, as a lad of proper spirit in England
would have done at the same age. It is quite laughable to
think of Moran trying to look dangerous, pursing his brow,
and generally cultivating the fiendish. And really, I am
told he was the admiration and the envy of all the Lèon
(boys) of the district, and quite won the hearts of the girls.

At last it was agreed that Moran had become a man, and 881
was fit to be a warrior. A certain rite, better known in
Africa than in Europe, was performed; and Moran was no
longer a boy, he was an El-moran—a warrior. His father,
who was wealthy, resolved to rig him out in the height of
military fashion. For this purpose they journeyed to a [563]
neighbouring settlement of Andorobbo—a clan who are
despised heartily by their distant relatives, the aristocratic
Masai, on account of their ignoble mode of gaining a livelihood
by the chase. After making the Andorobbo quake in their [714]

SECTION 3.—EDUCATION.

Unpopularity of education—Mission work—School at Ngong—Necessity for education—Proposed stock farm—Pure-bred bull—Sir Henry Belfield's comments on development of the Masai.

Unpopularity of education. 648* 181 87

Perhaps in no direction do the Masai demonstrate their conservatism more clearly than in their disinclination to emerge from ancestral custom and tradition by means of education. The whole system of tribal life is against progress and education appears to be generally unpopular among young and old alike. The elders deprecate such an innovation as applied to the boys, as they desire to keep their children at home for work with the sheep and cattle in order that they may live at ease while their sons do the work, and the Muran resent the idea of any system of control and would not willingly submit to a discipline in order to assimilate a knowledge of which they consider they stand in no need. This attitude of the Masai has no doubt been responsible for the almost total absence of Missionary activity in the reserve. [799]

Mission work. 648* 797 872

One or two members of the Masai tribe have attended Mission Schools, notably the African Inland Mission at Kijabe, but it cannot be said that the results of such instruction have invariably been successful. There are no established Missions in the reserve, though attempts have been made by certain Missionary bodies to obtain from the Masai permission to erect a station. These attempts have met with no encouragement from the Masai and nothing has been done.

School at Ngong.

During 1917, a school was opened in the neighbourhood of Ngong Station under the auspices of the Church of Scotland Mission, Kikuyu. This school was placed under the tutelage of a native teacher and about forty Masai children attend daily. Reading and writing in Masai and a little arithmetic are taught as well as the rudiments of agriculture, and as far as it goes this school may be considered to be a success, but it cannot be said that its establishment has gone any distance in solving the problem of the education of the Masai or of removing their aversion to the introduction of this means of disseminating civilization, by rendering them as a whole amenable to Missionary influence.

Necessity for education. 648*

Mr. Hemsted has repeatedly given it as his opinion that the education of the Masai is one of the most important steps that must be taken in order to weaken the conservatism of the tribe and induce them to emerge from their old and antiquated habits. The moral and physical degeneration of the tribe that was a natural result of the aimlessness of their existence and the want of a definite occupation could only be remedied by the provision of an object upon which their attention might be concentrated. In September, 1913, he asked that money might be set aside for the erection and maintenance of a native school, but this money was not forthcoming. Arrangements were then taken in hand whereby the Agricultural Department should give instruction to the tribe in the improved methods of tending and breeding stock, but these fell through before completion. In August, 1914, it was suggested that provision should be made for a Veterinary Officer to be stationed permanently in the reserve who would, in addition to veterinary work, impart a course of instruction in the care of stock, paying special attention to the method of dipping. This scheme also fell through owing to the lack of available funds following the outbreak of war.

Proposed stock-farm. 648* 231

In January, 1917, Mr. Hemsted submitted proposals for the establishment of a stock-farm for the Masai. It was, he said, generally agreed that the policy of the Government in regard to the Masai was to develop them as pastoralists and to recognise the reserve as a source of supply of cattle and sheep for the European parts of the Protectorate, and also eventually for export. One of the first essentials of such a policy would be to induce the Masai to aim at quality rather than quantity. Under existing conditions, the reserve was stocked with cattle of a most inferior quality, among them being an undue proportion of bullocks and aged and barren cows. Experience gained in connection with the purchase of supplies for the military authorities showed that a comparatively small number of their animals could be considered to be of the quality desirable for food purposes. In the old days, when the Masai were able to roam over the greater part of East Africa and there was little or no demand for their stock, the number of cattle they kept was immaterial. In those days the breed of their cattle benefited by the constant introduction of fresh blood obtained in the numerous raids they

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

consultation with Headmen and other representatives of the different Sections. 646
The Kajiado Council has no Headman among its members; six members have some education, and it contains a schoolmaster, an ex-Government clerk, a trader and two well-to-do stockholders. The Narok Council has one Headman among its members, but a smaller proportion of educated men than Kajiado. Though it is said that these two Councils are fairly representative of the majority of the community, the persons who now command influence and authority are to be found rather among the Headmen and subheadmen than in the two Councils.

The two Local Native Councils are, as elsewhere in Kenya, consultative and legislative bodies. As provided in Section 15 of the Native Lands Trust Ordinance 28 of 1938, they are consulted before any action is taken to set apart plots of land for shop sites or similar purposes. They have in addition the 652
function of dealing with the funds available in their two Native Treasuries for [646]
expenditure on local services. In this latter capacity, the funds available are shown in the figures on page 178 taken from the estimates of 1949

The deficit of £8,195 was to be met by drawing on accumulated balances. The principal source of Revenue is the Local Rate of 4s. in Kajiado and 5s. in Narok, the latter having been raised in 1948 to 5s. from the previous rate of 4s. per taxpayer. This rate is paid in addition to the Government Poll Tax [651]
of 15s. a head, which is somewhat higher than in most of the Provinces of Kenya. The revenue from Landed Property consisted mainly of rents of shop sites in the Reserve.

The expenditure under the head Administration was made up of a number of miscellaneous items, the stipends of Headmen and subheadmen being, as elsewhere, defrayed by the Government and not from the Native Treasuries. There is one Local Native Council school in Narok and one in Kajiado District, 871 ●
the teachers of which are paid from Native Treasury funds, but there are in addition a number of "outschools," which are all boarding schools situated alongside cattle "bomas," where the children live with their relatives and family cattle, and feed themselves. These schools are of a very elementary class. The Masai have up till recently been opposed to the extension of education and have in particular resisted the education of girls, though the latest reports suggest that this resistance is weakening.

There is in each Council a Finance Committee, but it is said that the 646
members cannot understand the estimates and make no contribution to their discussion. In general, the Councils have taken little interest in matters which do not relate directly to their livestock, and the younger men are said to hesitate to express their views in the presence of their elders. In their legislative capacity the Councils have passed, at the instance of the District Commissioners, Resolutions which follow the "model" Resolution regarding soil conservation, the cultivation of land on river banks and the burning of bush, to which reference will be found in the parts of this Chapter dealing with other Provinces.

The two Local Native Councils have joint meetings twice a year at Ngong to consider matters affecting Masai as a whole, and reference will be made subsequently to proposals for giving this conference a more regular position.

After the war the German titles were invalidated. In 1921 Sir Charles Ross purchased the title to, or a lease on 16,309 acres of the Crater to preserve the game and provide himself with a winter home. He never was able to be in residence, however, and there was a long litigation between him and the Tanganyika Government which ended by their repossessing the land when the said lease expired in 1940. Apparently a Captain G.H.R. Hurst also had a farm in the crater "for several years" after the war (Joelson, 1928).

There were a few European ranches along the north edge of Western Masailand in Kenya prior to 1911. At least one of these was owned by a Major Carnegie in the Lemek Valley north-east of Aitong (Kenya Game Dept., 648 1911). All European lands in Western Masailand in Kenya were given to the Masai as a result of the treaty of 1911.

[797] At Narok, Loliondo, and Ngorongoro Crater there are District Administration offices and missions. [871] [758] [439] Being a District Headquarters Narok also has a Masai school and hospital. Periodically Europeans, especially South Africans, have run small stores here and there in the area. We were told that one was at Ossos Nyire,

21:Huxley O, T-5 (no date) 1960 FL11 Luo
Kenya FL1
Masai FL2

good management on modern ranching lines will bring him in hard cash.

I saw the ranch mainly from the air. Lines of bush, cleared by bulldozers dragging giant chains between them, lie neatly along the contour like windrows in a hayfield. Soon the six or seven thousand acres that have been cleared will be fenced, and so managed that star-grass will cover them and steers fatten twice as quickly as they normally do. The snag, of course, is the Masai indifference towards cash.

Yet even here the seeds of change begin to germinate. There are schools now in all Masai centres, Masai students at Makerere, the start of a trickle of Masai teachers, doctors, administrators, vets. One has a Cambridge degree in geography, one is a Legislative Councillor. The shell of Masai indifference has been pricked.

The puncture so far is tiny, but time will enlarge it and one day, not so far away either, the whole shell may crack. Already a Masai parson, the Rev. Daudi Mokinyo, has fenced off 2,000 acres of communal grazing where he fattens steers bred from improved bulls, has a simple milking hall and makes ghee. Elsewhere, half a dozen other Masai have fenced in grazing land. When the railway took a pipeline off Mt. Kilimanjaro, they set up watering points for Masai cattle along its course, and in return one section of the tribe, the Il Kisonjo, agreed to operate a pasture-management plan, financed by a grazing fee, which is acting as an entry-point for new ideas.

When these movements spread, as they seem bound to do, the doom of the game will be accomplished. For game cannot co-exist with modern pasture management. Unless the Masai come to see game as an asset of high value, it will go here, as it has on European farms, and for the same reasons: it will go down before the fence, the improved pasture and the need to keep the land free of disease.

561 539 naa ol-poror ōbo illo. Netoni 'l-ooti. Ore pe ebulu, nemurati si ninje, nejiñg illo-poror.

Ore 'l-ooitōkīni aamurat te-kurum, naa likae-poror illo, nēji ninye e-murata e-kedyanye. Netoni śii 'l-ooti, nemurati si ninje, nejiñg illo-poror.

Ore 'l-pororí aare āji ol-aji ōbo.

Ore ti-atwa ol-poror ōbo nēoriori kat'-uni: etii ''L-chañgen-ōpir,' netii ''L-tareto,' netii ''L-paringōtwa lañg.'

right-hand circumcision, and that is one age. The younger ones wait and are circumcised later. They also become members of this age.

When the next circumcision festivals are held, those circumcised belong to what is called the left-hand circumcision, and that is the next age. The younger ones wait as before, and when they are circumcised they likewise join this age.

Now, two ages are considered equivalent to one generation.

Each age has three divisions, first, those known as 'The big ostrich feathers,' secondly, those called 'The helpers,' and thirdly, those known as 'Our fleet runners[1].'

561 805 Il-pororí loo-'l-Maasae oodamuni taata. — Masai ages which are now remembered.

E-murata e-tatene (Right-hand circumcision).	E-murata e-kedyanye (Left-hand circumcision).	Approximate date.
Il-Kinyōyo		
	Il-Tapari	1791 1799 } one generation.
Il-Kigiriyo		
	Il-Kisalie (the people of the plain)	1806 1814 } one generation.
Il-Kupai (the white swords)		
	Il-Kimirisho (those who drive away)	1821 1829 } one generation.

561 881 [1] When permission has been granted to hold the circumcision festivals (*vide* p. 296), one feast is held in each sub-district every year for four years in succession, and all those circumcised during these four years belong to the right-hand circumcision. An interval of about three and a half years then intervenes before another festival is held. All youths circumcised during the next four years belong to the left-hand circumcision. As an instance, a man born in 1872 would either belong to 'Our fleet runners' of the Il-Ñgarbet age or to 'The big ostrich feathers' of the Il-Kipōni age, i.e. he was circumcised in 1885 or 1889. Boys as a rule are circumcised when they are between thirteen and seventeen years old. Orphans and the children of poor parents frequently wait until they are twenty.

[P. 282]

the hut, and the skull, instead of being thrown away, is placed by the door. The tail is not separated from the hide as is usually the case: it is left on until the hide is worn out.

857 ●88 Ore ol-kiteñg le-'n-dōmōno mēji ēyeñgi inna-kata ake p' eīni en-gerai; kake eidimi aataanyu metaa bōtor oo metaa emurati. Memurati ol-tuñgani eitu eñgasi aayeñg ol-kiteñg le-'n-dōmōno.

Now the offspring bullock is not of necessity slaughtered when the child is born; it is permissible to wait until he is big and until he is about to be circumcised. No person is circumcised, however, until this bullock has been slaughtered.

E-murata.

The circumcision.

The following is a Masai custom:

A Masai child cannot be circumcised until the father has observed a custom called The passing of the fence.

The man who wishes to have his eldest child circumcised brews some honey-wine, and calls his neighbours together while it is being prepared.

A hut is then built for him outside the kraal, and he stays there for four days alone. He also sleeps there, and his food is taken to him.

During these four days he only approaches the kraal to look after his cattle when they are grazing outside.

881 292 [237] Neishopito 'n-dōkitin oo-'l-muran—ol-alem, o em-bere, o ol-kuma, o el-loñgo, o en-geranda, o e-aidai, o ol-mairutye,

He must don the clothes, ornaments, and weapons of a warrior—the sword, the spear, the club, and the shield, the cap made from the

the ceremony is started by his being shaved, after which a sheep or bullock is slaughtered, which is called The (animal) that has caused him to be taken out (from the boys' ranks). 881

On the second day the boy sallies forth to cut a tree called El-latim [1], which is carried by girls to the kraal, where it is planted at the door of the hut.

The next morning the boy goes and sits down outside the kraal to get cold. He also washes himself with water in which a fern called Father's spear [2] has been soaked. 881 304 [824]

When the sun is some way above the horizon, his mother opens the gate of the kraal, and fetches an ox-hide which she puts on the ground by the right-hand door-post.

The boy then takes his place on the hide, and the operator, a Dorobo, comes together with the men whose duty it is to hold the boy.

The man who holds him straightens out his legs, and the boy sits between them and is circumcised [3].

If the boy winces during the operation, his mother is beaten with sticks; and if the boy's parents know that he will behave like a coward, they go away and hide themselves.

As soon as the operation is over, the

[1] This tree is generally called Ol-oilalei (*Zizyphus mucronata*, Willd.), but it is called El-latim during the circumcision festivities.

[2] *Asparagus* sp.

[3] The circumcision of the Masai has been described in Thomson's *Through Masailand*, in Johnston's *The Uganda Protectorate*, and in *The Journal of the Anthropological Society for Great Britain and Ireland*, June, 1904 (Bagge). [113]

hide on which is the blood is carried by the boy and placed on his bed.

When the boys have all been circumcised they are called 'Sipolio (recluse).

They remain at home for four days, and bows are prepared for them.

They then sally forth and shoot at the young girls, their arrows being blocked with a piece of honey-comb so that they cannot penetrate into the girls' bodies.

They also shoot small birds[1], which they wear round their heads together with ostrich feathers.

The Sipolio like to appear as women and wear the surutya earrings and garments reaching to the ground. They also paint their faces with chalk.

When they have all recovered, they are shaved again and become Il-barnot (the shaved ones). They then discard the long garments and wear warriors' skins and ornaments.

After this their hair is allowed to grow, and as soon as it has grown long enough to plait, they are called Il-muran (warriors)[2].

The warriors are fond of the titles 'L-oingok (the bulls) and 'N-gaminini (the generous people), for they may then wear bells or a bracelet called il-torongen.

Now to become one of the Oingok, a warrior must kill many savages,

[136] [1] The bird which the Sipolio wear round their heads is the mouse bird (*Colius affinis*, Shelley). Boys who behaved in a cowardly manner during the operation are not allowed to shoot these birds.

[2] This word is commonly but incorrectly written Elmoran.

The feast called E-unoto *or* the selection of a chief[1].

If the warriors wish to select a chief, who is called Ol-aunoni, they choose a man whose parents are still living, who owns cattle and has never killed anybody, whose parents are not blind, and who himself has not a discoloured eye.

When they succeed in getting such

[1] A chief called Ol-aunōni is appointed for each sub-district. His duties are to keep the warriors of his sub-district together, and he is responsible to the chief medicine-man for their appearance in case of war. If a warrior disobeys the orders of his chief, he is flogged or maltreated by his companions.

[2] Pus (pl. pusi) means the colour of a corpse *or* blue.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

English as 'generation' and 'age', respectively. Such a terminology is too vague and of little assistance in shedding light on the matter. 561

Sometimes the Masai apply those terms alternatively to the class or to the units,[38] but usually *ol aje* stands for the broader and final association i. e., the age-class, and *ol poror* for the temporary association i. e., the age-unit.

Age-class membership is obtained through initiation, and is held for life. The initiation course is opened by some preliminary ceremonies. These must be performed before any individual member may be initiated singly or in a group. Analysis shows that the importance of these ceremonies in connection with the institution of an age class varies greatly. There are four such ceremonies: 1) *Epolos e-sita*; 2) *Embolosata*; 3) *Endungore*; 4) *Engibata*.[39] 561 881

Epolos E - Sita, " The passing of the fence ".[40] " A Masai child ", states HOLLIS, " cannot be circumcised until the father has observed a custom called " The passing of the fence ". The ceremony consists in a period of four days segregation. The candidate's father lives in a special hut set apart from the village, where he also takes his food. During this time he wears the clothes, decorations and weapons of a warrior. On the last day he is taken back to the village by some elders. Before he enters the house where the ceremonial wine is kept, he is addressed five times by one of the elders thus: " Go, become an old man ". He refuses saying: " Ho, I shall not ". At the fifth time, he replies – " Ho, I have gone then ". He then, enters the hut and puts aside the warrior's paraphernalia; the honey wine is drunk; and he is called by his son's name, thus: The father 881 593

[38] WHITEHOUSE, *Masai Social Customs*, in *J. E. A. U. N. H. S.*, 3, 1913, p. 146; FOX, *l. c.*, p. 449.

[39] It is a widely held opinion that the institution of the Masai age-class is based entirely on the circumcision cermony. Actually it is not uncommon to find the term " circumcision " used as an alternative to age-system and its groups. This opinion is partly justified by the expressions " right-hand circumcision ", *emurata tatene*, and " .eft-hand circumcision ", *emurata kedyenys*, applied by the Masai to the first and second age-units, *il poror*, that forms a single ageclass, *ol aje*.

It is a fact that circumcision is one of the outstanding ceremonies of the initiation course. However, it should be realised that circumcision is not identical with initiation, and above all that the institution of the age-unit as well as the age-class does not arise immediately out of circumcision. Therefore the tendency to make everything connected with Masai age-system gravitate towards circumcision is misleading.

[40] HOLLIS, *l. c.*, pp. 294 ss.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 593 of so-and-so. When he replies to his name, he is told to go and make a profit. He answers: " Herds and flocks ". This is repeated four times, and the ceremony is over ".

554 561 881 593 The ceremony is performed only once in a man's life, namely when he " wishes to have his eldest child circumcised ". This particular circumstance shows that by " the passing of the fence " a man obtains a special elderly status which gives him a right to have all his children initiated.

Thus, there is a relationship between the father's social status and the initiation into the age-class of his son's. None of these may be initiated unless the father has reached the proper status. The personal status of the father is reflected on his children. Therefore the " passing of the fence " is not in itself part of the age-system initiation, but a condition which must have been observed before a man is allowed to have his sons initiated.

[565] Other authorities (Fox) have stressed the fact that class membership of a Masai is somehow dictated by the class to which his father belongs. " The passing of the fence " gives a special emphasis to this fact and shows how a Masai's initiation into a class is conditioned by the social status of his father. It shows how the structure of Masai society stands on the balance of status of its members. [41]

881 634 [184] " *The tearing of the ox* " (*Embolosat ol Kiteng*). [42] Though this ceremony is performed by a single section or a group of sections, its performance has a far reaching value which is accepted throughout Masailand. The ceremony is performed by such sections as the Kakonyuke, the Dalalakotok and the Purko (all Kapiti). According to Fox the Kisongo also perform it. But this is denied by Fosbrooke, [114] who qualifies Fox's statement by saying that the Kisongo acknowledge and respect the value of the ceremony performed by the Kakonyuke.

881 561 634 As a matter of fact special importance is attached to the ceremony performed by the Kakonyuke, who in any case must be the first to do it and who have the lead in the matter. All the sections which

[41] The social balance between the father and his son is only an expression of a wider and basic principle, which, in our opinion, is an essential principle of Masai social organisation: the principle of the distribution of power. See Bernardi, *l. c.*, pp. 326 ss.

[42] Fox, *Notes on Marriage Customs among the Masai*, in *J. E. A. U. N. H. S.*, 42-43, 1931, pp. 189 s.; Leakey, *l. c.*, p. 448; *NAD*, 1926, p. 9, n. 11; 1927, p. 15, n. 61; Fosbrooke, *l. c.*, p. 27.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

do not hold their own ceremony come to, or acknowledge, the Kakonyuke ceremony. This is a point to be carefully noted. 881 561

Embolosat is preliminary not only to the circumcision ceremony, but also to any other initiation ceremony. [634]

Three different stages make up the whole of the ceremony, namely the election of the master of ceremonies, the contest, and the sacrifice of a bull followed by the naming of the age-unit.

a) The ceremony is organised by the elders. Their first task is to select a youth qualified to be master of the ceremonies (*ol opolos ol Kiteng*). They also must obtain his father's consent on payment of some heifers.

The transaction is kept secret because the office is not popular with the youths. The elders' nominee is then seized in order that he may not escape, and told what is in store for him.

Not every boy is eligible for the office, but only a member of the *Lugumai* clan. The *ol opolos* must wear the garments and the ear-ornaments (*surutya*) of the elders, whose status he is to be invested with, which seems the reason for the reluctance to accept the office. *The status of the ol opolos* is ceremonial and, according to Fox, he has no function outside the *Embolosat*. [614] [554]

The *ol opolos* has to supply the ceremonial bull, " without blemish, colour black with white breast ", [43] and the ceremony is completed at his village which is enlarged for the occasion. [44]

b) The day of the contest is fixed by the elders. In the morning the bull is taken back to the village, while the elders officially introduce the *ol opolos* to the other candidates. These are told to look up to him because he is their *ol opolos*. Then, the elders order the bull into the village and immediately the boys rush in to get hold of it.

Not all the boys enter the competition, only a few from each attending section. [45]

Members of the Kakonyuke section make a point of being victorious. The contest is stopped by the elders as soon as victory is [634]

[43] In the Annual Report, *NAD*, 1926, p. 9, n. 11, we are told that the " black ox is fed one day on milk and native beer, not being allowed to eat grass ".

[44] According to Leakey a special new village is built.

[45] Leaky writes that " only three candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their houses while the ceremony takes place ".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

88 56 in sight. Victory consists in getting a hold of the bullock by its right horn and maintaining the grip.

c) After the contest the bull is smothered, and skinned; rings are made out of the skin and distributed by the *ol opolos*.[46] "The meat is eaten and the elders go to a place apart to pray to God for the boys. The age is then given a name which is kept until the *E-Unoto* ceremony, which takes place some years later". (FOX).

The bones of the ox are burnt and the fire is guarded to avoid any evil spell being cast on it.

Eventually the boys return to their homes and wait for their turn to be circumcised.

The fact that "only the right hand circumcision", i. e. the first of the two age-units of an age class, performs the ceremony is essential to an analysis of the significance of *Embolosat*.[47] It means that *Embolosat* is the first ceremony of the initiation which institutes the class, and not simply of the initiation which institutes the age-unit. Indeed the left hand circumcision, i. e. the junior age-unit of the class, does not perform *Embolosat*, and therefore the senior age-unit acting at *Embolosat* does it on behalf of the whole class. *Embolosat* should then be regarded as the starting point of a new class, opening the period during which the class is instituted. This specific value of *Embolosat* is confirmed by the acceptance on the part of all the Masai of the Kakonyuke ceremony. We do not know the reason why this ceremony should have such a paramount importance, but its social significance seems to be a thoroughly established fact. LEAKEY states that "only one ox-seizing ceremony (is held) in the whole Masai country, before a new age-group proceeds to initiation and circumcison". This statement is qualified by FOX in the sense that *Embolosat* is also performed by other sections, as we mentioned above, but the Kakonyuke must first perform it. Of the Kisongo FOSBROOKE writes: "the elders are extremely vague as to its (of *Embolosat*) meaning, but that the new age is formally inaugurated by *Embolosat* in Kenya is fully confirmed by the elders round Mondul".

[46] According to LEAKEY, the *ol opolos* is given a thong made from the skin and he is supposed never to throw it away, an obligation which does not apply to the youths who are given the rings.

[47] In the chart of Masai "age-grades" arranged by FOSBROOKE, *l. c.*, p. 24, *embolosi* is shown as taking place before the two circumcision periods of the age-units. This does not agree with the evidence offered by FOX.

[114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

The value of the Kakonyuke *Embolosai* is further ascertained from the analogous value of *Ngeherr* proper of the Kisongo. This is a ceremony perfecting the institution of a class. It is performed by the Kisongo and accepted by all the Masai of Tanganyika and Kenya. *See below.* 881 561 634

The fact that sections other than the Kakonyuke hold their own ceremony may probably be ascribed to the tendency of the section to act as independent group. Their performance, at any rate, has only a limited local value.

Endungore – Engibata.[48] It appears that these two ceremonies, *Endungore* and *Engibata* are closely connected, if not actually one single ceremony.[49] The aim of *Endungore-Engibata* is to define the period for the institution of the age-units and start the initiation course related to such institution. The ceremony is performed by "the right hand and the left hand" age units, i. e. before the institution of each of the two units (WHITEHOUSE, MERKER, FOSBROOKE). 881 561

Some of our authorities stress the fact that the first step towards initiation must be taken by the boys. This is true, but the decision to hold the ceremony rests entirely with the elders, and the aim of the candidates' action on the elders is merely to convince that the time is ripe for the decision.

The elders contacted by the boys are members of the class next but one above the class which is to be formed by the candidates.[50]

It is not the leading elders that the candidates contact first, but others, whose duty, apparently, is to instruct them on the right way and method of approaching the leaders of the elders' class.

Those who are to see the elders are selected with care. They "must be pure bred Masai and must have some knowledge of ceremonial routine" (DAWSON).

It is relevant to note these details. They show how the prospec-

[48] MERKER, *l. c.*, p. 61; BAGGE, *The circumcision ceremony among the Ngwesha Masai*, in *J. R. A. I.*, 34, 1904, p. 168; HOLLIS, *l. c.*, p. 190; LEAKEY, 187 ss.; FOX, *Further Notes on the Masai of Kenia Colony*, in *J. R. A. [49] According to WHITEHOUSE *engibata* is the name of a dance which starts the *endugore*.

[50] In these and the following paragraphs whenever we refer to the elders" we intend the members of this class, unless otherwise stated.

2: Bernardi E, M-4 (no date) 1955 FL.12 Maasi FL.12

881 561

tive unit, and class, leaders are carefully selected and practically trained. It is from the outstanding senior members of the class, i. e. from those who have come to the fore since the very beginning, that leaders, whatever their function in Maasi society, emerge.

881 52 203

The messengers (*ol emal* – message) wear warriors' garments and decorations but no arms. "Their quest is a peaceful one" (WHITEHOUSE). *

Only two of the deputation will be introduced to the class-leader (*oipuonos*) by some of the elders. The message is delivered on behalf of all class candidates to the leader with some presents of honey. The matter is discussed by the leader and his council, and the messengers are advised of the date for the feast.

[431]

881 561

It is at this point that, according to WHITEHOUSE, *Endungore* is performed.

The ceremony is started by a dance (*Engibata*) in full array * followed by a prayer to God (*Ngai Narok* – the black God) for the candidates. The elders then take the candidates apart and instruct them on their duties towards the elders and their seniors generally. As soon as this is over, a fire-stick, a male circumcision knife, and a small dead bird (other than a dove) are produced. The elders break the stick, pierce the eyes of the bird and break its legs, and lay a curse on the knife. "In this way, the elders formally lay claim to the sponsorship of a new agegroup. From that time the boys refer to their sponsors as *Il Piron* whilst the elders refer to the boys as *Il-Piron*" (WHITEHOUSE). Indeed, it should be noted, as FOSBROOKE points out, that though the term *il piron* is frequently used with reference to the elders, it is a reciprocal term expressing a mutual relationship.

The symbolism of the *Endungore* ceremony is plain: the ceremony closes an initiation period.

When the *Endungore* is over, some of the elders (presumably the *oipuonoi*) and three or four of the candidates go with presents to inform the prophet that the firesticks have been broken. They say – *Ol piron lang ele, kiro nale.* "This is our fire stick, we are one", which probably means that a new firestick is used to produce

* It is not clear whether the number of boy messengers is fixed. LEAKEY states that the *emal*-boys number from six to twelve, DUNCAN 36, FOSBROOKE 9. Probably no significance is attached to the actual figure.

[201]

* There rows are formed, each distinguished by proper decoration, the first wears ostrich-feathers, the second wears lion-mane head-dresses, and all the members of the third have their bodies decorated with white stripes.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

fire as a symbol of the new relationship between the elders and the candidates.

The next stage of *Endengure-Enpiboto* is the election of the unit leader (*oipuremani*). This office is not popular with the boys,[*] and the election is kept as secret as possible from the person concerned. It is not very clear whether the election rest primarily with the boys or with the elders, both have a say in the matter since it is of common concern.[**] The selected person is chosen from the so called *ingopior*, i. e. "those who have shown ability and strength of character during the many debates already held" (WHITEHOUSE). This indicates that he must be a man of talent and personality. Some consideration is also given to the clan and family from which he comes.[***] The appointment is forced upon the boy, but only after the approval of his family has been obtained. The insignia of the *oipuremani* is a black cloth, which is presented to him by the leader of the elders. Prayers are also offered for the new chief.

The naming of the age-unit takes place now with great ceremony. [illegible] These are called *mojongoma*. They take part in the ceremony dressed up in full regalia and painted with red clay and chalk.[****]

On the following day a great sacrifice of two bullocks[*****] is also

[*] For the same reason given for the *el ogolai*.

[**] WHITEHOUSE states that "the names of possible candidates are submitted to the *il-piron* elders for consideration; the elders do not actually select a boy but prevent any unwise choice being made. The responsibility of making a choice rests with the boys themselves". On the other hand FOX, l. c., p. 436, states that in the first instance the nomination is made by the elders, and if the candidates are dissatisfied with him they may ask for a change. WEAVER, l. c., p. 61, states the boys elect one of their number.

[***] Particularly, he must not be a member of the *Ingidongi* clan, the clan of the ladies.

[****] According to DYWER, the *mojongoma* must be *ok* if the ceremony is for the "right-hand" unit, *ok* if the ceremony is for the "left-hand" unit. These boys must be pure Masai, and must never have killed a Masai.

[*****] "The *mojongoma*", writes DYWER, "assemble in the middle of the village and the *Ajoromani*, having passed honey beer into a trough made out of a hide here, blows two blasts on it and shouts the name. There is no answer as this name must never be mentioned by anyone. He again blows the horn and shouts out another name and is answered by a shout of 'Ee' from the *mojongoma*. He again shouts out the name and is again answered by a shout of 'Ee'". The name is later announced to the other candidates by the leader and the *mojongoma*.

[******] The sacrifice of the bullocks (one must be entirely white, the other entirely black) is ended by great ceremonial. The two beasts are swallowed and

2:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[Pl. 1] ceremony performed. The festival lasts three days, during which some of the candidates are allowed to leave the place. It is only at the third day that they remove all decorations and are allowed "to cross the stream".

The fourth day after the sacrifice, all candidates are informed by their leader that they are free to return home, and on doing so he warns them that they must be honest and loyal. With this *Endaapere-Enpiliate* is over.

The relationship between the elders and the candidates, the *il piron* relationship, offers a special subject of analysis.

As stated above, the elders in question are members of the class next but one above the class to be formed by the initiation of the candidates. The gradation marking the two classes perhaps offers the clue to discovering why the sponsors of the candidates must be members of a definite class. We know from the rhythm of Masai class-system that the class next but one above the class of the candidates is generally the class of the fathers of the candidates. The

[Pl. 2] piron-elders, therefore, possess the same social status as the fathers of the candidates. Hence, being on the same social level, the *piron*-elders possess the social capacity to be sponsors for the candidates. Such sponsorship brings about a mutual relationship between the two classes, a relationship respected by members of the classes concerned throughout their life.

The *piron*-elders have a *real* authority over the candidates so that no ceremony connected with initiation may be started by the candidate without the approval of the elders. The piron-relationship is officially established at the *Endaapere* ceremony.**

[Pl. 3] their blood is drunk in turn by the sponsors and all candidates. Then two of the elders smear the face of the candidates with the bullocks' heart. The elders must be of the 'right-hand' sub, but they are assisted by two of the 'left-hand', who take their place when they are tired. The meat is distributed among the elders (if uncircumcised, i. e. the last initiates, are attending, they are not supposed to be seen eating meat in public), and the usual sacrificial hide rings are prepared for all those present. All the time the horns of the animals are watched to prevent stealing for the purpose of magic, and finally they are burnt out and all the remains buried underground.

** That the piron-elders take a strong view of their power is shown by a case reported by Fosbrooke, pp. 16 s. In February, 1956, after *Endaapere* had been performed, " a *Dorit* elder (i. e. senior elder, member of the class next but two above the candidates of the time) decided to circumcise his two sons, and hastened home in preparation for the event. The local *Dorit* (the piron-elders), hearing of this, determined to stop him, marched into his home (vil-

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Endungore-Engibata is performed both by the 'right-hand' and the 'left-hand' age units. This shows that the ceremony has a direct effect on the institution of the age units as such and not as coefficients of the age-class. The formation of the age unit takes place during an official period in which all its prospective members must be properly initiated. This official period is primarily defined by the performance of *Endungore-Engibata*.

Endungore-Engibata obtains its value by emphasizing the negative aspect of the new initiation period, namely by making it illegal, a new *piron*-relationship having been established, to initiate any one except on the new *piron*-elders' authority, and by closing the association of further members to the previous age-unit. **

Engibata, therefore is to be considered as the opening ceremony for the institution of the age unit. After *Engibata* candidates are legally initiated and automatically, i. e. precisely for having been initiated during a definite approved period, become members of that age unit.

From a territorial point of view *Endungore-Engibata* is a sectional ceremony. It is performed by minor territorial sections, but no single performance is acknowledged throughout Masailand, as in the case of *Embolosat*. This makes clear the different value of *Embolosat* and of *Endungore-Engibata*. *Embolosat* opens the period for the institution of the age-class, and therefore its value is accepted

lage) and drank the beer themselves. It is confirmed by numerous reliable elders, that, even if the *laibon* had given his sanction for the circumcision, the *Dareto* elders would have been justified in acting as they *did*". Note the prophet's limited authority.

** This is clearly shown by the case reported by FOSBROOKE and quoted in previous footnote. The *Dwasi* man had failed to inform the *Dareto* elders (the *piron*-elders) of his intention, and very probably his sons' initiation was intended to be performed by the outgoing *piron*-elders. If the *Dwasi* man had his own way, his sons would have become members of the last age-unit, but illegaly: hence the so strong objection of the *Dareto* elders. The above explanation is confirmed by what MERKER, pp. 70 s., states, namely that a fourth minimal division, *el oirogna*, could be formed by those who were circumcised immediately before the official closing of the period for individual initiation. See below. In *NAD*, 1937, p. 22, n. 84, we read as follows: " the Officer in charge reported that a number of *lapek* (uncircumcised boys) who would have been too old to await the next '*Ngobata*' were circumcised and incorporated in the *Kidoto* age ". Probably this is a similar case as that referred to by MERKER. The case shows that there is a definite closing time for every set. After this time every new initiate will be associated with a new set.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

88 | by all the Masai. It is performed by the first group of class members
54 | (right-hand unit), but, as it were, on behalf of the whole class. *Eduaqore-Engibata* opens the period for the institution of the age unit. It is performed by the first batch of unit-members, who can be said to act on behalf of all their unit-mates.

Eduaqore-Engibata cuts the period which was opened by *Embolosat* into two sub-periods during which the age-units are instituted.

To these two ceremonies, *Embolosat* and *Eduaqore-Engibata*, correspond two closing ceremonies having analogous effects and limitations. Thus, every age-unit is officially closed by the performance of the *Unete* ceremony, and the class is officially closed by the performance of the *Ngoherr* proper.

The problem of the interval between these ceremonies will be discussed below.

IV – INDIVIDUAL INITIATION [illegible]

88 | Individual initiation, or the first initiation of individual members, is effected through the circumcision ceremonial.

This initiation is not, territorially, a sectional ceremony, but it is performed at any village where candidates are found. The ceremony is conducted by small (2 or 3: FOSBROOKE), [illegible] or perhaps larger (MERKER), [illegible] groups of candidates, or even singly (FOSBROOKE, and HOLLIS), [illegible] and the latter seems to be the general rule according to (FOX), [illegible] The guiding principle seems to be that a candidate must be initiated at his father's village. [illegible]

The expression " individual initiation " describes how each and every candidate is expected to pass through it, and how the cere-

[illegible] BROOK, l. c., pp. 168 ss.; MERKER, l. c., pp. 61 ss.; HOLLIS, *Further Notes on the Masai of Kenya Colony*, in *J. R. A. I.*, 60, 1930, pp. 148 s.; *Notes on Marriage Customs among the Masai*, in *J. R. A. U. N. H. S.*, 42-43, 1931, pp. 190 ss.; LEAKEY, l. c., pp. 190 s.; FOSBROOKE, l. c., p. 38.

[illegible] " Each boy... at his own village separately " states FOX, *Notes on Marriage Customs among the Masai*, p. 190; and FOSBROOKE, l. c., p. 38, writes " ... in the father's home (village) ". The coming together of few candidates for initiation makes the performance easier and economic. Thus, for a purely economic reason the children of poor parents frequently wait longer than others for initiation.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

monies are not performed by some selected individuals on behalf of others, as for *Embolosat* and *Endungore-Engibata*. Also from a territorial point of view all these ceremonies differ. A single performance of *Embolosat*, which opens the class-period, is valid for all Masailand; *Endungore-Engibata*, which opens the unit-period, is sectional; individual initiation is held at each village. The following diagram illustrates the correspondence.

A candidate's age for individual initiation is indicated by FOSBROOKE as 16-17 years. The principle for admission to initiation seems to be that the candidate must have passed his puberty, and his father must have performed "the passing of the fence" as described above. **

Circumcision is the central point of Masai individual initiation. The ceremony is performed in three stages, *a*) a testing of the past moral behaviour of the candidate; *b*) the ordeal of circumcision; *c*) a period of special segregation.

a) On the eve of circumcision day the candidate is completely shaved by his mother. The elders are entertained with meat and beer ** at the house of the candidate's mother. ** Then the elders

** Cases may occur of boys who have to be initiated at an earlier age for some special reason. FOSBROOKE, *l. c.*, p. 28 records the instance of a father's orphan having to be initiated in his early puberty in order to inherit.

** HOLLIS, *l. c.*, p. 297, states that a bullock is slaughtered and called *el-ewpakiniak* — the (animal) that has caused him to be taken out of the boys' ranks. FOX says that a number (5, 6 or 8) of gourds of beer are offered to the elders.

** There is no special meaning in the use of the mother's house. The custom is occasioned by the arrangement of a Masai polygynic village. Every

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly".[29] Apparently no special ordeal such as we find among the Kipsigis is attached to this testing.

b) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (FOX). Generally it takes place early in the morning. The operator [648] is said never to be a Masai. Generally he is a Dorobo, and sometimes a Kikuyu (FOX). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other leaders or officers out of the pure Masai."

881 304 Before the operation is performed, the candidates take a cold bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (BAGGE).[30] Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *eng alipeta*, after which he is allowed to speak.

881 [591] The circumcised youth is presented by his mother's brother with new sandals, and henceforth he is not supposed to make use of any garment worn before the ceremony. A procession by four girls (cfr. FOX), waving branches takes place to the entrance of the [594] boy's hut. The elders are again entertained with meat and beer;

[595] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not as precise, to say: the house of the candidate's father.

[29] We may assume that these questions are connected with the candidate's moral and sexual behaviour. FOSBROOKE states that "prior to circumcision [834] no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Nandi-speaking peoples.

[30] Cfr. the election of the *Ol Oi opolse* at the *Embolosat*; of the *ol amai* boys, the *oipuenani*, and the *meferapma* at the *Endungoro-Engitala*; of the *ol emenai* at the *manie*.

[231] [31] LEAKEY states that it is "absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony". No further details are given nor are reasons offered for this fact which is not mentioned by any of our Masai authorities. However, it shows that circumcision is not related to the cattle aspect of Masai culture.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

the warriors with milk. This seems to be the feast that MERKER refers to as "the feast of the circumcised boys – *ol ogor lel aijok amerate*". The newly circumcised remain in his mother's house until the wound is healed. 881 [574]

c) At this stage all the newly circumcised assemble from the various villages; they form small bands and go around shooting at small birds with special small bows and arrows. They wear women's clothes, women's ear-decorations (used also by elders) and a special headdress to which they append the birds they kill. During this period they are called *es sibolio*, pl. *i-sibolio* – the recluse, and are under strict regulations: At evening they must return home and enter the village before the cattle. They must not drink blood or cut meat or touch it with their hands. They must not wash. They must avoid girls. They must not fight with, or be struck by, any other: if this happens, milk must be put on their heads. They must not go out in the daytime without their special headdress.

The period of segregation may last for some months. At the end by order of the elders they are shaved by their mothers (hence they are called the shaved ones – *ol barnoti* pl. *el barnot*) and presented by their fathers with the arms of the warriors, a spear, a sword and a shield. It is a peculiar distinction of the initiates to let their hair grow and to twist it into a pigtail of which they are very proud. [73] At this later stage the initiates will be called *ol morani*, pl. *el moran*, i. e. those who have been circumcised. [302] [302]

It is generally stated, and apparently even by the Masai themselves, that as soon as a youth is circumcised he becomes a man. The evidence shows clearly that the expression "becomes a man" does not describe the real social status of a newly circumcised. Even if the statement is taken to mean that through circumcision a boy has attained the status of a man, and therefore is entitled to full participation in Masai social life, the statement is at variance with the evidence. As a matter of fact no Masai is allowed to marry soon after circumcision. In order to marry he must be at least a senior initiate, i. e. a member of the senior age-unit. [74] A newly circumcised (i. e. a junior, and to some extent also a senior initiate) may 884 881 [582] 561

[73] On this particular custom, *cfr.* MERKER, *l. c.*, p. 143; ELLIOT, in *T. N. and R.*, 1948, n. 26, pp. 80 ss.

[74] The seniority of the age units is discussed in the next paragraph. With reference to the text above we note that even when a senior initiate marries, he is not allowed to beget children, as this is the privilege of the elders. See below, where LEAKEY and FOX are cited.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 c) That the killing of the bull is a religious sacrifice is shown [182] by the fact that the bull is killed in a ceremonial way, i. e. by suffocation.[169] Prayers are also offered to God, and ceremonial hide-rings from the bull's skin are distributed to all those present.

d) At first sight the ceremonial fire gives the impression of being inconsistent with this ritual pattern. It serves to destroy the bones of the sacrificed bull, and it is also produced at the foundation of the village of the initiates (*manyatta*). The importance of this ritual element, however, becomes evident if we compare it with the so called *piron* relationship. *Il-piron* is the firestick used for producing new fire. The breaking of a similar stick by the *piron*-elders is the main rite of *Endungore*, and the elders and candidates when they visit the prophet say: "This is our fire-stick, we are one".[170]

881 561 Against the background of the above patterns, individual initiation, in the way it is now performed, i. e. by circumcision, seems to stand apart and follow a pattern of its own. This discord is somewhat striking, and one may be permitted to hazard the opinion that circumcision as such is foreign to the age-system of the Masai. Indeed, the structure of the age-system as such has no direct connection with individual initiation.

561 *The Overlapping Rhythm.* Discussing the interval between the various ceremonies which institute the age-units we accepted the period of seven years as a good thongh vague, approximation. On that basis we may now assume that fifteen years is a parallel approximation of the interval between the institution of two age-classes.

The innacuracy of any numerical computation with regard to Masai age-system is emphasized by what we call the overlapping rhythm.

Up to this point the age-class has been considered absolutely, i. e. without relation to preceding or succeeding classes. In facts the actual institution of a class is related to other classes, and especially to that class immediately preceding and the one which follows immediately. Similarly one age-unit is related to the unit next above it and the one next below it. Let us consider the phenomenon by focussing attention on the left-hand unit. This is the second of the two units of a class, and the junior of the two. As

[183] [169] The ordinary way of killing a beast is by stabbing it in the nape of the neck. Cf. HOLLIS, *l. c.*, pp. 157, 300.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ing to his father to learn something about his origin, and 869
this I believe is—among other stories—what he was told.
The primal ancestor of the Masai was one Kidenoi, who 869
lived at Donyo Egèrè (Mount Kenia), was hairy, and had a
tail. Filled with the spirit of exploration, he left his home 773
and wandered south. The people of the country, seeing him shaking something in a calabash, were so struck with admiration at the wonderful performance that they brought him women as a present. By these he had children, who, strangely enough, were not hairy, and had no tails, and these were the progenitors of the Masai. As Moran had not heard anything of the theories which were convulsing scientific Europe and America, he remained ignorant of the fact that he had struck upon an interesting legend which the *savants* of civilized society would have given their beards to verify.

Meanwhile Moran practised with the spear, and killed 858
innumerable imaginary enemies. He listened intently with beating heart to the stories of daring cattle-raids and sanguinary fights, but as yet he could only dye his spear in the blood of an antelope, or, it might be, of a buffalo. His food [262]
still continued to be that of a non-fighter, namely, curdled milk, maize, or millet, and meat. But vegetable paste was the meat of women and children, and he loathed it, though he ate it.

As he approached the age of fourteen he began to develop a truculent and ferocious expression, instead of making himself sick in the attempt to smoke a cigar, or examining his upper lip in the glass, as a lad of proper spirit in England would have done at the same age. It is quite laughable to think of Moran trying to look dangerous, pursing his brow, and generally cultivating the fiendish. And really, I am told he was the admiration and the envy of all the Lèon (boys) of the district, and quite won the hearts of the girls.

At last it was agreed that Moran had become a man, and 881
was fit to be a warrior. A certain rite, better known in Africa than in Europe, was performed; and Moran was no longer a boy, he was an El-moran—a warrior. His father, who was wealthy, resolved to rig him out in the height of military fashion. For this purpose they journeyed to a [563]
neighbouring settlement of Andorobbo—a clan who are despised heartily by their distant relatives, the aristocratic Masai, on account of their ignoble mode of gaining a livelihood by the chase. After making the Andorobbo quake in their [714]

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

881 sandals, they chose a handsome shield of buffalo hide,
[714] beautifully made, elliptical in shape, and warranted to stand a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never *make* shields or spears, though there is nothing in the possession of which they pride themselves so much—
881 they returned to the kraal, and then called for an El-konono.
563 This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
881 murderous-looking weapons. After a careful examination
411 Moran selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost uniform width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

881 These important acquisitions made, our hero now pro-
[302] ceeded to dress himself up as became his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[301] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[291] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus stood forth the complete military masher, ready for love or war.

882 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young, unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

[text continues on p. 250]

I'Sigirari

MASAI SOCIAL CUSTOMS.

By L. E. Whitehouse.

101 These notes have been prepared from information collected from the Masai who occupy the south-east corner of the Southern Reserve, between Kilimanjaro and the Chylulu Hills. They belong to a large [614] section of the tribe called I'Sigirari. This section unlike other Masai sections is divided into two sub-sections, the Ingidongi, to which all "medicine" men belong and the Il-Kisongo, the majority of whom live in Tanganyika Territory.

The Kisongo living in Kenya distinguish themselves from those of Tanganyika by assuming yet a third name "Il Oitokitok." This name is undoubtedly derived from that of a spring "Engoitokitok," meaning "bubbling water." It was in the vicinity of this spring that the Masai settled when first they inhabited that part of the country.

561 I propose to deal with certain customs and ceremonies connected with the founding of a new age group. For the benefit of those who may not be conversant with this form of tribal government, may I briefly explain that the Masai tribe is divided into age groups called *il poror* or *ol-ajl*. All youths circumcised during a specified period of years are said to belong to the same warrior age and together they form one age-group. In some sections an age-group is formed of two distinct divisions, a senior and a junior, known as the right-hand circumcision and the left-hand circumcision. Later a group passes from the status of warriors to that of elders and thus make way for a new age-group to rise to warrior rank.

[881] Masai boys are circumcised usually between the ages of seventeen and twenty-five. The ceremonies which recommence about every seven years extend over a period of about five years. When the majority of the youths are circumcised and a warrior age-group of considerable number is assured, a movement is made to prevent any more boys from joining that group. Those responsible for the movement are the elders of the age-group next senior to the warriors at the time. These elders are to become sponsors and instructors to the members of a new age-group for the formation of which they make preparations.

They first send for a few of the bigger uncircumcised boys and explain that it is proposed to form a new age. In order to do this a ceremony called *endungori* must be held. The boys receive their [292] instructions and immediately don short cloaks made from black calf skins and anoint their heads with red earth that they may resemble warriors. They then set off in procession round the country on what

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

B. Junior Warriorhood. — circumcision — subdivisions of age — formation of Manyattas — relations between junior and senior warriors — promotion (Unoto).

881 304 561 As in the case of other ceremonies, it is not the details but the wider significance of the operation which claims our attention. The first most important point is that circumcision is the visible sign of admittance to full membership of the tribe, and that anyone desirous of becoming a "Masai" must be operated upon. After admittance there are many ceremonies of promotion but it is not essential that every member of the tribe should attend; it is essential, however, that he should be circumcised. Prior to circumcision no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to. Further, the moran, whose perquisite the mature girls are, deny the youths' access to their girls. Consequently circumcision and its attendant ceremonies admit the youths to a full sex life.

881 304 428 561 Hollis states that circumcision usually takes place between the ages of 13 and 17, though orphans and the children of poor parents frequently wait until they are twenty. My own observations would indicate that 16 or 17 is the lower limit, except in the case of youths whose fathers have died, who want to be in a position to inherit. The existence of this latter custom, circumcision to permit inheritance, is a good example of the meaning of the ceremony. If it has not been performed, the youth whose father dies cannot inherit; the cattle, wives, etc., must all be taken over by a paternal uncle as guardian pending the circumcision of the eldest male child. But if permission can be obtained for his circumcision a youth of ten or twelve can assume control of a boma, to the exclusion of all other relatives. In other words, as stated above, circumcision is the mark of full membership of the tribe.

561 When the initiation of a new age has been sanctioned circumcision takes place singly or in groups of two or three in the father's boma. The ceremony is usually performed during or at the end of the rains, a time of plenty amongst the Masai, and is suspended during the dry season. Four successive years are taken up with the circumcision of an age, and it is natural that those circumcised in one season possess a marked feeling of affinity towards one another. This shows itself in the possession of a group name for each batch, the same names being employed from generation to generation. They are, for the first batch, *il Changen opirr* or *il Kiperen*, followed by *il Paringotwalang*, *il Kirimbot* and finally *il Tareto*. The above refers to a right hand age; a left hand age, being fewer in number, possesses only the three last-mentioned divisions.

561 621 When all of one age have been circumcised they divide themselves into companies (*isirit*) each of which forms a warrior village or barracks (*emanyatta*). In Tanganyika the manyattas are usually formed on a territorial or sectional basis, e.g. Engasumet, Olmolog, Mferegi (areas) or Selei, Purku, etc. (sections), though Whitehouse describes a ceremony whereby the warriors, presumably of one area, divide themselves up, frequently on a clan basis.

836 and also provided they avoid such young girls as are attached to men in the warrior
883 classes. That these young uninitiated lads even try to have intercourse with married
684 women is certain, as there is a special penalty provided for women who so debase
[834] themselves. (*See* Marriage.)

881 *Preparation for Initiation.*—No boy is allowed to think about preparing for
561 initiation until he can show a growth of facial hair indicating puberty. Boys are always very anxious to be initiated as soon as possible, and as soon as they consider that they can make a reasonable claim that they are old enough, they form themselves into groups of anything from six to a dozen, dress themselves in new calf-skins, and, taking with them bows and arrows, go out on a tour of all the villages of the district announcing that they are candidates for initiation and demanding presents. These groups are called *olamal*, and by long custom they must be given anything they ask for which is within reason.

Custom dictates that they shall ask especially for honey and hyrax-skin karosses,
[431] and these they take and present to senior and influential elders belonging to various circumcision groups, at the same time requesting them to bring up the question of their initiation at the councils, and to make all the necessary arrangements. There is often a delay of anything from six months to a year before the consent of the councils is obtained and arrangements are set on foot. In the meantime the groups of boys continue on their visiting tours collecting more presents as further persuasion to the elders to do as requested, and fresh groups of boys are formed and add themselves to the number of the candidates for initiation.

During the whole time that these *olamal* groups are wandering about from village
[836] to village they may sleep with any of the uninitiated girls in the villages which they visit (even those who are attached to young warriors), provided that they observe the normal restrictions of the warrior classes.

Ceremony of Seizing the Ox by the Horns.—When at length the elders have consented to proceed with the initiation ceremonies, those elders to whom the presents of honey and hyrax-skins were given make the necessary arrangements for the ceremony of seizing the horns of the black ox. These elders select a village of some elder of the
[614] Lukumai sub-clan (the ox must always be supplied by a member of this sub-clan), and demand a black ox without any defect and without any trace of other colour on any part of its body. Should the owner of the selected village not possess such an ox he must obtain one from another member of the Lukumai sub-clan, and if he cannot do so he must obtain it from another clan by purchase or exchange, and present it to the elders. This ox is called *oregeteng*.

When the ox has been procured, a special village is built near where the ox was obtained, and a day is fixed for the horn-seizing ceremony. Only those of the candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Those candidates who are eligible to take part in the ceremony assemble on the day fixed for the proceedings. They come from all parts of the Masai country, north, south, east, and west, as there is only one ox-seizing ceremony in the whole of Masai country before a new age-group proceeds to initiation and circumcision. They wear ordinary everyday dress and carry sticks. The ox is brought into the village by the elders in charge of the ceremony, and the boys are lined up some distance away. A signal is given, and immediately the boys race to the ox, each boy endeavouring to get a firm grip of the ox's horns or of the hump. As soon as two boys have succeeded in gripping these parts firmly, all those boys of the same clan protect him with their sticks, while all the others endeavour to force the boys to release their grip. Should they do so and should boys of another clan succeed in taking their place, they in their turn are attacked by the other clans and defended by their own. After a time the elders stop the contest, and those who succeeded in keeping their grip are greatly lauded. The two boys who actually held the horns and hump respectively will be renowned for their success for the rest of their lives. It is a recognised thing that during the contest very many individuals receive more or less serious wounds. 881 561 [484] [614]

As soon as the contest has been stopped, the ox is slaughtered and eaten by all present at the ceremony, and the hide is cut up into small strips, in each of which a hole is cut, and a strip put as a ring on the middle finger of the right hand of each of the boys who participated in the contest. If any skin remains over after each boy has been thus decorated, it is cut into a long thin thong, which is given to a boy candidate of the Lukumai sub-clan (*i.e.* the sub-clan who provided the ox). This boy is called *olobolosoi elegeteng*. This thong must never be lost or parted with, but the small strips of skin placed on the boys' fingers must be removed a day or two later and thrown down in that part of the boy's mother's house where the calves sleep. [301] [230] [614]

When this ceremony is over the boys go to their own homes to await their turn for circumcision.

Circumcision.—The candidates are not circumcised in groups at local centres, but individually at their own homes, and as the number of operators is limited, candidates may have to wait for anything up to two years before their turn comes. The operators travel from district to district, visiting all the villages where there are candidates, and circumcising them at their own homes. During the interval between the end of the ox-seizing ceremony (before which none of the candidates may be circumcised) and the time when his turn to be circumcised arrives, each boy goes back to his cattle-herding and carries on with the normal routine life of an uninitiated boy. 881

The operators who circumcise the boys are never true Masai, but invariably "Wandorobo" living in Masai country, but no explanation of this could be obtained except that it had always been so from the beginning. [563]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

881 As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circum-
[308] cision. He is then fetched back to the village and has his hair shaved off by his
[292] mother, and has new sandals and a new skin dress given to him. This dress must be made of the skins of four rams sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is [illegible] the morning, the cattle are kept in the yard until the ceremony is over, but [illegible] in the middle of the day the cattle must be brought into the yard and [illegible] during the ceremony, for it is
[231] absolutely essential that the cattle sh[illegible] their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new
[304] ram-skin dress and sandals, and the operator performs the operation with a special
[413] small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A fat ram is killed for the patient, who is fed on meat boiled in fat and
[262] on plain cold fat, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

881 *The Novitiate.*—The period of novicehood varies in length of time, as a boy
561 must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses
[884] between the time of the bull-seizing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last few to be circumcised may only have a few weeks in the novice stage, while others may be about two years in that stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows visiting more especially those villages where they hear that fresh candidates have just been circumcised, and enlisting them in their groups. During the whole
[834] novitiate period the novices must not cut their hair at all, nor may they indulge in
[302] any form of sexual intercourse, nor may they use red ochre, but only plain fat on their bodies. They are required to shoot as many birds as they can, and to
[323] skin them and stuff them roughly with grass, and tie them to their hair as a
[301] decoration. More and more skins are added to this head-dress as the weeks go
[237] by, until at length a boy has a complete wig of stuffed bird skins. Certain birds must on no account be so used, notably birds such as pigeons, doves, and

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

881
561

francolin. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *loibarton* and are free to go anywhere "like women," and, in fact, may even visit the *manyattas* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *osingoilen*, which are danced by the novices alone. [535]

881
561
302

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior. [431] [411] [914]

The new warriors now form themselves into groups, and organise the building of villages, which will be their headquarters. These villages are the *manyattas* of the warrior groups (*see* below). 56 70 361

PART III.—WARRIORHOOD.

The Age-Group System.—The general word denoting an age-group is *uriniari*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single ox-seizing ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *janjiendur* and *murainpdienge*. 561

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *janjiendur* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *janjiendur* and a *murainpdienge*, must move out together, leaving the next *janjiendur* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *murainpdienge*, and in due course yet a third group will be initiated and enter the age-group as *janjiendur*, after which no further transfer of a novice group can take

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Summary of Warriorhood.

From boyhood upwards to the Elders' stage there are the following recognized steps, each with appropriate "rites de passage," except in the last stage. 561

(1) *Candidate Stage.*—After the boys have attained puberty, as shown by the first signs of hair growth on the face, they form bands who wander about the country receiving presents, and finally there is the horn-seizing ceremony, after which the candidates are circumcised and enter the novice stage. [881]

(2) *Novice Stage.*—No sex life is permitted to novices, who during their novitiate wander about with bows and arrows shooting birds for head-dresses. This stage is concluded by a head-shaving ceremony, after which the novices enter full warriorhood.

(3) *Junior Warrior Stage.*—This is a period of roughly nine years from the end of the novitiate. During this time—with certain exceptions—no warrior may shave the hair off his head. Life is in the *manyattas*. This period is concluded by the *Eunoto* ceremony and a general head-shaving which marks the entry into the senior warrior stage.

(4) *Senior Warrior Stage.*—Warriors remain in this class until there are two age-groups in it, and then transfer to the Elders' group. Transfer from the senior warrior stage to the Elders' stage cannot take place unless there are two age-groups ready to move up together.

PART IV.—GIRLHOOD.

Work.—As soon as girls are old enough to do so, at the age of about seven, they start helping their mothers and sisters in the general work of the village, sweeping out the huts, milking the cows, nursing the children, drawing water and sewing skins. There is, however, one sort of work which is never done by any uninitiated girl, and that is getting firewood. This work is specially reserved for married women. The girls' work may either be in the home village or else in a warrior's *manyatta*, should they have brothers living in a *manyatta*. 857 [313 581]

Sex Life.—From a very early age indeed the young girls imbibe the general atmosphere of Masai sex life. As already mentioned, those of them who have brothers living in the *manyattas* sleep from a very early age—long before puberty—on the same beds as couples indulging in sexual intercourse; and even those girls who live in the home villages learn all about such matters at a very early age owing to the fact that they always sleep on their mother's bed. As soon as ever the first signs of puberty are noticeable, girls may be asked by the warriors to sleep with them, and the question of whether there is complete intercourse or not rests then entirely with the girls. Moreover, the uninitiated boys, and especially those who tour the villages as candidates for initiation, expect all young girls who are not already 864 883 836

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

684 *Boyhood. Sex Life.*—In past times uncircumcised boys were severely punished by the warriors if they had sexual intercourse with a girl of any sort. This is no longer the case, probably because the warriors are afraid of Government interference should they ill-treat the boys. [178] [648]

Should an uncircumcised boy have intercourse with a married woman he may, when his time comes to be circumcised, fail to find an elder who will sit behind him according to custom and hold him during the operation, but may have to sit unsupported. In an instance which I observed a boy who had so offended was circumcised in due form on payment of a fine of four cows. [304]

881 561 The elders who decide when a new circumcision is to take place are those of the *Ol-Piron* generation to that which is about to be circumcised.

Ol-Piron means a firestick, and its significance is explained below under organization of generations and ages.

Ceremony of Seizing the Ox by the Horns.—The Masai call this ceremony *Kuhokuot o ol-Giteng*, which means the tearing of the ox. *Ol-Giteng* is the general word for an ox and is not confined to the one used at the ceremony. It must be performed first by the Il Kakonyuki section. I have not seen it performed.

881 *Circumcision.*—I will endeavour to describe a circumcision as I saw it. On my arrival a few minutes before sunrise the two boys who were candidates were standing naked and shivering outside one of the village gates. They had previously been completely shaved. An old man poured a little water over each from a pannikin. Ox hides were brought out and each boy sat on one. Each boy was held by an elder sitting behind him. They were just outside the village with their backs to the thorn fence which encircles the village. The operator appeared and circumcised each in turn. He was a Kikuyu and performed the operation with a dirty-looking razor of a type made in Birmingham or Germany. [304] [413]

As soon as the operation was finished new sandals were put on the boy's feet by the elders; and the elder who was sitting behind him stood up, still holding him, and walked him off backwards through the village gate.

As soon as both boys had been circumcised the operator rushed off to repeat the performance at a village near by before the sun was high. I went back into the village with the elders. One of them drew blood from the neck of an ox for one of the candidates. We went into the hut of the mother of one of the candidates, where the boy sat silent on a bed while we elders refreshed ourselves with honey wine. The boy is not allowed to speak for a period after the ceremony, but I have forgotten the length of the period. [393]

A branch of a tree is tied to the front of the boy's mother's hut by leather thongs passed through the wall.

561 178 *The Novitiate.*—Nowadays the novices do not need to remain in this stage till all the other candidates have been circumcised, but shave after a few months. They

13:Huntingford E-4 (no date) 1953 FL.12 Masai FL.12

553 and these old men. If it has not previously received a name, it may have been
852 called by the name of its father's father; but at the naming ceremony it receives a name which may be that of its father or a name not connected with any relative. People are also given nicknames referring to their physical or other peculiarities.
551 There is much uncertainty about Masai names; but every man has a patronymic, consisting of *O-le*, "son of," preceding his father's name; this he appears to assume after circumcision. Girls after circumcision may be referred to as *E-na*, "daughter of," preceding their fathers' name. At marriage, the husband gives his wife a new name. The practice of teknonymy is a regular feature. Before the circumcision of his eldest son, a man becomes known as "the father of" *Se-ené-ni*, i.e., if his son is called Sendeu, he becomes Mzeye Sendeu; his wife similarly becomes Ono Sendeu, the mother of Sendeu.

551 The name of a dead child, woman, or warrior is not spoken again, and if the
748 name is an ordinary word, that word is no longer used by the family. Thus, if a man called *Ol-ereno*, "the gentle one," died, on his death the word *ereno* would be replaced in his family by some such word as *pulpul*, "smooth."

Circumcision (E-murata)

● 881 Boys' circumcision ceremonies take place at intervals of about three years, and
304 the circumcision period is "open" for about four years. Though the operation may be performed on boys singly or in small groups, the whole number of those circumcised at the same time throughout Masailand forms an associating group corresponding in some degree to the Nandi *mat* (see pp. 31 and 46). Judging by the published
[711] accounts, circumcision was a much less prolonged and ceremonious affair than among the Nandi. Before a boy can be circumcised, the father must submit to what is called *ene-pulmate e-nito*, "the passing of the hours." After making honey-wine, he stays alone in a small hut outside his kraal, dressed as a warrior. After four days, some elders bring him back to his kraal, where he is told to remove the warrior's clothes and become an old man. His son may then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the afternoon after this has been done an ox or sheep is killed and eaten by the warriors and elders of the neighbourhood. On the second day, the boy cuts a tree called at
[124] this time *e-dalem*,* which the girls of the kraal carry to the door of the hut [in which the boy sleeps?], where it is planted. On the third morning the boy gets up early and sits outside to get cold; after sunrise he is circumcised, the operator being often a Dorobo. From the fourth to the seventh day he remains at home, and then goes out, shooting with blunted arrows at the girls, and with other arrows at small birds
[884 which he wears hung from his head. This is his occupation till he has recovered;
292 during this time he is known as *e-ngudoi* and wears the dress of a married woman, including the *i-ewata* ear-rings, and an ostrich-feather on his head. After recovery he is shaved, given weapons and warrior's clothes, and becomes *ol-darasai*, "the shaved one," i.e., a junior warrior. Till his local company forms its *manyata*, he lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There are no special times for this. An ox or sheep is killed before the operation. During the period of recovery they are known as *e-ngudoi*, and wear on their heads a wreath of the Hyphaene palm, *ol-mwiaan*, or *ol-gum*, instead of an ostrich feather.

Age-sets

564 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear type, that is, they do not work in recurring cycles and do not come into existence till they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis (1905), and Fosbrooke (1948), as well as from the Tarotia age-sets (Hollis, 1901), that some at least of the names are fixed and recur. In 1936 the names Il-Kimolo

* *Dorphna mwimaan*; normally *ceth-i-i*, *e-ndeh*.

/90 cont./

551 Third name for girls: Ēig or = the weapon, from ēmo, to sweep: Lentj. Ōi gieje, Ombōti, after the-named tree: Lewhan, from ombōro or ōkōro = to rain through into the house: Ōi gobei = the way: Betete = the one who fell down (e-betete = to fell: e-ōbōtete = I have fallen): Ibbet, after a similar sounding call with which one calls back the goats and sheep that have strayed from the herd in the pasture: Ekma = the thick-headed one.

[105] Names that women received after their marriage are: Ēig ere' ai, that is, the wife who comes from the Ameme area, as the Ideni call the Gape-Arumba /Great Arumba/ area or Ideniberg /lit. Ideni/, where many Ideni found refuge in the famine. Ēi gieboro, after a former great warrior named Ōi gieboro: similarly formed Ēi gieboro from Ōi gieboro.

VII.

000 Circumcision of the boys. -- Point in time. -- The circumcision years, festivities at the end of them. -- Day of circumcision. -- Operation. -- Feast. -- Behavior of the circumcised until the healing of the wound. -- Circumcision of the girls. -- Point in time. -- Operation. -- Behavior of the circumcised until the healing of the wound.

• 01 According to the belief of the Ideni, circumcision was introduced
[115] by a command of God. After circumcision boys and girls are regarded as adults. The former are supposed to be circumcised as soon as they are strong enough for participation in a war expedition, that is, at the age of 12 to 16. Sometimes it is somewhat earlier, if the boy is particularly well developed, somewhat later if the father, lacking any other labor force, cannot spare him in the tending of the small livestock. Circumcision takes place least for poor sons of poor people
[122] or for propertyless orphans. Usually, for the ever feasts held by the circumcised youths each one in turn has to provide a head of cattle; he must therefore either own it himself or have a father who will give it to him. If he lacks both, the boy first tries to acquire a small stock
[124] of cattle by tending herds for the well-to-do, and until then he remains uncircumcised. Such boys are called ai ewiki ā gieiko. This word means "herdsman," but signifies that it is a matter of someone who tends the livestock of other people for pay, like the Biblical word "hireling."

/[illegible]/

The circumcision of boys is a public office and is ordered by the [illegible]. With the issuing of his order, the circumcision years ([illegible]) begin, that is, the following four to five /[illegible]/ years during which the boys may be circumcised. In all the districts the old men now hold consultations and set a definite day (1)

1. The circumcision of the boys belonging to the lineage of the [illegible] always takes place on the 24th day of the lunar month.

for the circumcision of the first division of the boys in question. Similarly, later, in the following years, the circumcision days, usually only one in each year, will be determined for the following divisions of boys. It should be mentioned here, beforehand that all boys circumcised during a series of circumcision years form an age class (cf. [illegible]) and that this age class is given a definite name by the [illegible]. The circumcision period is ended by the [illegible] ordering the [illegible]. This is a festival which is celebrated by the first boys in

Ill. [illegible]. [illegible] boys.

/91 cont./

• 91 | quarion for the next circumcision period. These choose for this, as the site of the festival, a recently built family kraal, which is then designated as <u>ala of</u> [<u>a village</u>] <u>eight</u>. Decked out with a costume in imitation of the warriors, but without weapons and, in-
[1-2] deed, a long stick to the right hand, the boys amuse themselves
[3-4] with dance and song in the vicinity of the kraal. When they crowd
[5-12] into the kraal after the first dance, in order to unloose their perched dances with milk, they are /92/ sprinkled with honey beer by an old cow standing at the entrance and congratulated with the words <u>ee</u> <u>dabulu</u>, <u>ee</u> <u>ilwe</u> <u>ilifu</u>, <u>ee</u> <u>dabe</u> <u>lwelu</u>, that is, roughly: may you become ever more numerous, make us rich, and bring prosperity to the country. During the festival the boys choose a spokesman or spokes <u>(ni</u> <u>ingwenyati)</u> from their midst, whose task is to train them in commodity and corps spirit. When the festival has lasted two days, the boys move into the various neighboring areas in order to repeat it there. In this way an <u>ali</u> <u>gubha</u> often lasts a month. It is also to be mentioned that very many women appear at these festi-
92 | vals, and especially all who have up to then remained barren. The
[92] former appear in part as mothers of the celebrating boys, in part as companions of the barren men, and the latter for their part come in order to have themselves pelted by the boys with -- fresh cattle dung, because through that they will become fruitful, according to a con-
91 | viction prevailing generally among the blacks. In each of the follow-
ing four to five circumcision years [<u>ni</u> <u>emahwagi</u>] <u>eight</u> a
[1-2] similar festival is celebrated. It should be mentioned further that the cattle whose meat is used to feed the participants at the <u>ali</u> <u>gubha</u> festival are not killed, as is customary, by a stab in the neck, but rather by suffocation.

Let us now consider the circumcision festival:

[1-11] A few weeks beforehand one already sees the boys, adorned with as much ornamentation as possible, singing and dancing every day in their own and the neighboring kraals, through which they express their joy over soon being able to enter the privileged standing of the
[1-2] warriors. On the day before the operation the boy's head is shaved,
[3-4] and the hair is thrown under the bed of the children in the maternal
[5-12] hut. The boy takes off his skin caps and ornaments and dresses himself

/82 cont./

• 881 in a long leather apron reaching to the feet (ol gelé, ol gelíni),
[892] which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before sunrise at a place in the vicinity of a kraal, chosen by the three or four operators needed each time. The warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pour cold water over each other, in order to become numb. The operation,
[752] which is professionally performed by old men, especially Wandorobo,
[887] is the following /the following paragraph has been translated from the Latin of the original source/:

881 After the outer skin of the penis has been drawn back and the
304 inner lamella of the foreskin nearest the back of the glans has been cut around with a knife, the glans lies in an elongated sheath, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an uvula (1).

> 1. The following should also be mentioned here /the rest of the footnote has been translated from the Latin/: In order to look cut (circumcised), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "ol jugi." The swelling glans prevents the foreskin from sliding forward.

[412] /83/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs apart on the
[752] leather apron spread out on the ground. After it, the wounded part is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who strides backwards for this, into his mother's hut and is poured on the ground there. An
[866] agent to stanch the blood is not used. During the circumcision
[626] itself the parents of the boy remain in their hut, for if the latter moans or cries out from the pain, they are punished with abusive

/93 cont./

words and blows by the assembled warriors, because they did not wear their son to have the hardening and self-control necessary for a warrior, while the weakling is reviled for a long time afterwards as *ekiyo* = coward, or *ekiduli* = the bad one. After the circumcision all the men of the neighborhood gather in the kraal, where they are regaled with meat and honey beer by the fathers of the ones just circumcised, after the latter have kindled a fire with juniper twigs (*Juniperus procera*). The festival is called *ol ogiki l ol olpick ayamba*, that is, the festival of the circumcised boys. Unbelievable amounts (1)

1. I once observed that my four Maasi boys together at an evening meal ate over 60 pounds of lean meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take some fresh milk. People joke and laugh and everyone seems to want to outshout the others. The warriors boast of alleged heroic deeds in former wars and discuss the prospects of the ones circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which the budding warriors will augment the personal herds. Suddenly the glances of a few who had just been joking darken and turn toward a distant hut at whose door a military old man is sitting. They jump up and go toward him with quick steps. The angry expressions on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeringly compare to the roar of pain of a bull being cut. The old man has quickly fled from their temperatures into his hut, and his attackers vent their wrath on two gourd bottles of honey beer left standing, which they knock over and

• 88 | /83 cont./
[626] [52] trample underfoot. The one now scorned had also wanted /84/ to regale guests with it on that day, but no one came to him whose son showed himself to be a *shifuf*. While the old people, as long as [535] there is something to eat and drink, are only interested in that, the [533] warriors, already early in the afternoon, start to dance and sing with the young girls and amuse themselves in this way into the night. Not until about ten o'clock do they go back to their kraal, to which the girls presently follow them, after they have begged for a little more milk, which they take along to their lovers. /Ill. 18 appears here./

[558] The circumcised boys, soon after the completed operation, went into the huts of their mothers and stayed there for seven days, until a superficial healing of the wound has taken place. In order to hasten this, they are particularly well cared for and are given only milk, [411] blood, and meat. During the following period, until complete [225] healing, they roam in small bands with bow and arrow -- they do not use the ordinary bows, but ones only about half as long, made only for this occasion; the arrows used with them have a wax ball at the tip -- through *meppe* /85/ and forest, in order to shoot small birds, the skins of which they string by the beaks on a cord, which they place garland-like around forehead and occiput. Between the bird [301] skins the *en sibelio* (sing. *en sibeli*) -- as the newly circumcised ones [302] are called during their recuperation -- stick an ostrich feather on each side of their heads and paint their faces with white clay (*en dumat*). On the first day they go out, they slaughter a white goat-[262] buck on the *meppe*. After they have roasted and eaten its meat, they throw the gnawed bones into the fire. This meal is called *el glae l el bemek* (*el glae* = the goat buck, *el bemek* means the tree with whose branches they make the fire). Every evening after their excursions they return to the kraal and to the huts of their mothers.

[21] 91 | As soon as the young girl, who until then has lived in the warrior kraal in the most unrestrained freedom, concludes from certain

[591] the mothers agree /66/ on a definite day (1)

[613] 1. The circumcision of the girls belonging to the El kiburón always takes place on the 24th day of the Masai month.

for which they then secure an old woman experienced in circumcision. Otherwise they wait a few more weeks: perhaps a girl who is ready will will be found, since one need not necessarily wait for the aforementioned indications, or, if by chance a circumcision of the boys is about to take

/66 cont./

•881 place, they wait until that day. Shared pain is half the pain, and a certain coyness is part of good breeding among the brown Masai maidens too. The circumcision of boys and girls on one day takes place at different spots, and, while no female creature may come near the boys' place, so too no man or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the latter's head has been shaved and her hair tossed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (ol gĕla, el gelani), which her mother has made. The latter is now trying /67/ to make the parts coming into question numb

with cold water and, during this, encouraging her little daughter sitting on the ground with beating heart. The operation is a simple excision of the clitoris and is performed with a sharpened piece of sheet iron (ol moronja) such as is used to shave the head. Then the small wound is washed with milk, which, together with the blood shed, seeps into the ground. A blood-stanching agent is not used here either. Until complete healing the girl remains, as es sibeli (pl. es sibelie), in the hut of her mother. Instead of the bird skins and ostrich feathers that the boys put on, she wears around her forehead a ring plaited out

[344] [142]

[192]

[341] [342]

/67 cont./

881 of grass (ol márisian), into the front of which she sticks an ostrich
[301] feather, and, just like them, paints her face with white clay. On
[302] the circumcision day the women of the kraal arrange a feast among themselves, for which the girl's father has given a head of cattle
[583] and her mother has brewed honey beer. As soon as the bridegroom of the es siéngiki (pl. es siéngikin) -- this is the title for a circumcised girl and for a young woman -- learns that she is well again, he brings her father the last remainder of the bride price, whereupon nothing more stands in the way of the wedding.

The above-mentioned years counted as circumcisionless years for the boys do not come into consideration for the circumcision of the girls, as, indeed, is in the nature of the matter; rather, they may be circumcised at any time.

VIII.

000 Age grades. -- Designation of the members of the different age grades of both sexes. -- The terms of address, affected by membership in an age grade, among male individuals, female individuals, and male and female individuals between each other.

561 As among almost all culture-poor peoples, so too among the Masai the social position is assigned to the single individual in general
[562] by the age grade to which he belongs. That this is shown most clearly in the life of the man is explained by the mere fact that he is the lord living for his own pleasures; far below him stands the woman, who has a right to live only because of her labor power for him and her ability to bear children.

Until circumcision the male individual is regarded as a boy (ol aíjoni, el aíjek); during the preparation for circumcision and until after the healing of the wound, he is called os siholi (pl. es sihoiio). Thereafter, for a space of time of about two years, he is introduced to the warrior's life and during this period is called ol barnoi (pl. el barnot). When this apprenticeship, during which folly and youthful exuberance are supposed to spend themselves, is over, he is regarded as a full-fledged warrior, el morúai (pl. el móran). As such the Masai spends his "best years," until he leaves the warrior standing at the age of 28-30 in order to get married and, as el móran (el morak),

[Warrior Kraal]

/84 cont./

836 701 Every warrior has his favorite girl (na sandja) (1).

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover na sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

*539 *773 *171 *121 304

as the closest association of ideas: circumcision -- conception -- birth. Therefore circumcision is regarded here as a means, even though not necessary for conception, nevertheless desirable for it and promoting it. We find the same thought in the Bible, where God, in Gen. 17, 6, when he announces to the 99-year-old, childless Abraham the sign of the covenant, i.e., circumcision, says: "And I will make thee exceeding fruitful, and I will make nations of thee."

According to the preceding, the circumcision of boys seems to owe its origin to the view that it increases the procreative ability of the man. Quod judicium positum est in experientia, virum membro circumciso coire longius, feminam magis irritari. Viri membro non circumciso coëuntis seminis ejaculatio accelerstur, saepe nimis, priusquam feminae voluptas venerea culmen ascenderet. Membro circumciso seminis ejaculatio retardatur et cum voluptatis venereae culmine congruit, quod ad conceptionem efficiendam fauxtum est. /It is a judgment based on experience that a man with a circumcised organ has intercourse longer, and excites the woman more. The ejaculation of semen of a man having intercourse with an uncircumcised organ is speeded up, sometimes too much, before the sexual pleasure of the woman reaches a climax. When the organ has been circumcised, the ejaculation of semen is slowed down and coincides with the climax of sexual pleasure, which is favorable to bringing about conception./ This leads to the conjecture that the lawgiver who introduced the circumcision of boys was acting with the intention of promoting conception and along with that increasing the number of births, i.e., multiplying the people. Circumcision [181] became a preparation for marriage and, accordingly, is still carried out by the Masai, as among other primitive peoples, only after the onset of puberty. A later age made it a tribal symbol for the Israelites and Masai and, as such, moved it among the former to earliest childhood. Though the belief -- strong in Israel as well [186] as among the Masai -- in the divine favor before other peoples, the tribal symbol then became a visible sign of this, from which is derived the explanation of circumcision as a symbol of religious

... for Tanganyika.

561 181 (b) Age grade: The age grade system is of great importance in the life of a Masai man, since it regulates his conduct toward other men and women and is the basis for the political organization of the tribe. The system is also of significant use in dating past events (Fosbrooke, 1954).

721 181 Warfare was of great importance to the Masai prior to the 1900's. The whole social organization of the tribe was built around the production and maintenance of an effective fighting force. Although actual fighting is relatively rare now, the customs and social organization remain basically the same.

857 233 381 561 701 Until his early teens the primary duties of a boy are herding livestock (Fig. 9). Roughly every seven years there are a series of ceremonies culminating in a circumcision ceremony. This ceremony is taken by all the young men of the correct age (roughly in their mid teens), and it produces a class of warriors each of whom is known as ol-morani, or moran. This is considered the most important occasion in the life of a Masai man, and from then on he is a full member of the tribe. Each group to be circumcised is given an age

class name, and is allied with the next (or previous) group, the first being the right hand grade and the other being the left hand grade. After several years the junior warriors go through another ceremony and become full warriors. Their total period of warrior duty may be about 15 years. The warriors are distinguished by their hair style and spear.

The hair style involves a complicated plating of the hair with some combination of cords, pieces of hide or gut, bark, or sticks; all liberally plastered with sheep or cow fat and red ochre. Elliott (1948) has detailed the methods and materials used and variations in style between areas.

The warriors' spear is often over five feet long. It has a long, narrow, double-edged blade, an equally long but round and pointed tail, and between them a very short wooden hand grip serving as a shaft. Warriors also carry a flat, double-bladed long knife or short sword called a simi. These useful weapons are carried at the waist in a red leather sheath. Originally the metal weapons were produced by metal-working tribes. They now come from England and the first thing a moran does after buying a spear or simi is to file off the brand name. When in ceremonial dress or at war the

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

881 sandals, they chose a handsome shield of buffalo hide,
[714] beautifully made, elliptical in shape, and warranted to stand a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never *make* shields or spears, though there is nothing in the possession of which they pride themselves so much—
681 they returned to the kraal, and then called for an El-konono.
563 This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
881 murderous-looking weapons. After a careful examination
411 Moran selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost uniform width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

881 These important acquisitions made, our hero now pro-
[302] ceeded to dress himself up as became his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[301] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[291] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus stood forth the complete military masher, ready for love or war.

882 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young, unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

[text continues on p. 250]

FL12 Masai FL12

882 of bullocks. Reaching the kraal, our friend found himself among a large number of splendidly built young savages—indeed the most magnificently modelled men conceivable. And here let me for a moment pause in my story to indulge in a passing word of description.

142 There is, as a rule, not one of the El-moran under six feet (I am speaking of a superior clan). Their appearance, however, is not suggestive of great strength, and they show little of the knotted and brawny muscle characteristic of the ideal Hercules or typical athlete. The Apollo type is the more characteristic form, presenting a smoothness of outline which might be called almost effeminate. In most cases the nose is well raised and straight, frequently as good as any European's (though passing into the negro type in the lower class, such as Wa-kwafi). The lips also vary from the thin and well-formed down to the thick and everted. The eyes are bright, with the sclerotic whiter than is common in Africa. The alæ are generally narrow, with a Mongolian upward slant. The jaws are rarely prognathous, while the hair is a cross between the European and the negro, rarely in piles, but evenly spread over the head. Hair is scarcely in any case seen on the face or any part of the body. The cheek-bones are in all remarkably prominent, and the head narrow both above and below. The teeth and gums of almost every one
[304] are such as I have already described, though I think I have neglected to mention that the two lower middle incisors are extracted. Tatooing is not practised; but every Masai is branded with five or six marks on the thigh.

Such are the main characteristics of the El-moran; but before we resume our narrative let us note a few facts about the young damsels—the Ditto—who are seen to be flirting with our lions.

Happily facts support the verdict of gallantry when I say that they are really the best-looking girls I have ever met with in Africa. They are distinctly lady-like in both manner and physique. Their figures are slender and well formed, without the abnormal development about the hips characteristic of the negro. They shave, like the men, the dark
[302] gums, and the bad sets of teeth. The hair is shaved off totally, leaving a shiny scalp. As to dress, they are very
291 decent, and almost classical, if a stinking greasy hide can have anything to do with things classical. They wear a dressed bullock's hide from which the hair has been scraped. This is tied over the left shoulder, passing under the right

particular relation. The naming ceremony is as follows:—When the child was born 553
about a small ram is chosen and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good-looking and of good character, as otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named some of his
own he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [959]
which is performed with a small, sharp two-edged knife. The reason given for this [812]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [958]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start drawing water they have the holes of the ears pierced. Rods
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is restricted 262
to milk, fat, and meat, as no crops are grown.

PART II.—SEXUAL.

Herding.—As soon as they are considered old enough (and this depends upon the 857
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [136]
is not considered in any way wrong for these boys to begin indulging sexually as soon [137]
as they like, provided that they observe certain restrictions. They may do as they [138]
like with the younger girls in the neighbouring villages, provided, of course, that they [139]
observe the law forbidding sexual relations with any member of their own sub-clan,

11: Leakey E-5 (no date) 1930 FL.12 Masai FL.12
Kenya

[83] and also provided they avoid such young girls as are attached to men in the warrior
[113] classes. That these young uninitiated lads even try to have intercourse with married
[194] women is certain, as there is a special penalty provided for women who so debase
[134] themselves. (See Marriage.)

[881] *Preparation for Initiation.*—No boy is allowed to think about preparing for
[561] initiation until he can show a growth of facial hair indicating puberty. Boys are always very anxious to be initiated as soon as possible, and as soon as they consider that they can make a reasonable claim that they are old enough, they form themselves into groups of anything from six to a dozen, dress themselves in new soft skins, and, taking with them bows and arrows, go out on a tour of all the villages of the district announcing that they are candidates for initiation and demanding presents. These groups are called *olomal*, and by long custom they must be given anything they ask for which is within reason.

Custom dictates that they shall ask especially for honey and lynx-skin karosses, [831] and these they take and present to senior and influential elders belonging to various circumcision groups, at the same time requesting them to bring up the question of their initiation at the council, and to make all the necessary arrangements. There is often a delay of anything from six months to a year before the consent of the council is obtained and arrangements are set on foot. In the meantime the groups of boys continue on their visiting tours collecting more presents as further persuasion to the elders to do as requested, and fresh groups of boys are formed and add themselves to the number of the candidates for initiation.

During the whole time that these *olomal* groups are wandering about from village [836] to village they may sleep with any of the uninitiated girls in the villages which they visit (even those who are attached to young warriors), provided that they observe the normal restrictions of the warrior classes.

Ceremony of Seizing the Ox by the Horns.—When at length the elders have consented to proceed with the initiation ceremonies, those elders to whom the presents of honey and lynx-skins were given make the necessary arrangements for the ceremony of seizing the horns of the black ox. These elders select a village of some elder of the Loiborsoi sub-class (the ox must always be supplied by a member of this sub-class), [814] and demand a black ox without any defect and without any trace of other colour on any part of its body. Should the owner of the selected village not possess such an ox he must obtain one from another member of the Loiborsoi sub-class, and if he cannot do so he must obtain it from another class by purchase or exchange, and present it to the elders. This ox is called *enguiny*.

When the ox has been procured, a special village is built near where the ox was obtained, and a day is fixed for the horn-seizing ceremony. Only those of the candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place.

11: Leakey E-5 (no date) 1930 FL.12 Masai FL.12
Kenya

Summary of Warriorhood.

From boyhood upwards to the Elders' stage there are the following recognised stages, each with appropriate "rites de passage," except in the last stage. [SL]

(1) *Candidate Stage.*—After the boys have attained puberty, as shown by the first signs of hair growth on the face, they form bands who wander about the country receiving presents, and finally there is the horn-mixing ceremony, after which the candidates are circumcised and enter the novice stage. [M]

(2) *Novice Stage.*—Do not life is permitted to novices, who during their novitiate wander about with bows and arrows shooting birds for head-dresses. This stage is concluded by a head-shaving ceremony, after which the novices enter full warriorhood.

(3) *Junior Warrior Stage.*—This is a period of roughly nine years from the end of the novitiate. During this time—with certain exceptions—no warrior may shave the hair off his head. Life is in the manyatta. This period is concluded by the *Emuro* ceremony and a general head-shaving which marks the entry into the senior warrior stage.

(4) *Senior Warrior Stage.*—Warriors remain in this stage until there are two age-groups in it, and then transfer to the Elders' group. Transfer from the senior warrior stage to the Elders' stage cannot take place unless there are two age-groups ready to move up together.

Part IV.—Girls.

Work.—As soon as girls are old enough to do so, at the age of about seven, they start helping their mothers and sisters in the general work of the village, sweeping out the huts, milking the cows, nursing the children, drawing water and washing dishes. There is, however, one sort of work which is never done by any uninitiated girl, and that is getting firewood. This work is specially reserved for married women. The girls' work may either be in the home village or she is a warrior's manyatta, should they have brothers living in a manyatta. [957] [B] [M]

Sex Life.—From a very early age indeed the young girls inside the general atmosphere of Masai sex life. As already mentioned, those of them who have brothers living in the manyatta sleep from a very early age—long before puberty—on the same beds as couples indulging in sexual intercourse; and even those girls who live in the home villages learn all about such matters at a very early age owing to the fact that they always sleep on their mother's bed. As soon as even the first signs of puberty are noticeable, girls may be asked by the warriors to sleep with them, and the question of whether there is complete intercourse or not rests then entirely with the girls. Moreover, the uninitiated boys, and especially those who tour the villages as candidates for initiation, expect any young girls who are not already [SL] [SL]

[83] attached to the warriors to sleep with them. In fact, we may say that for the girls
[84] are life-starts before puberty and continues (with no such period of sexual prohibition
as the boys have during the novice stage) until they are initiated. There is one
important restriction, however, as far as the girls are concerned, and that is that
[85] sexual intercourse with married men is entirely prohibited before initiation, and is
considered a very serious offence.

[86] *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and
there are no special rules and regulations attached to this condition, but, on the other
hand, during the actual menstrual period a girl should refuse all invitations to
sleep with men or boys. There is no restriction of work during the menstrual
[87] period as there is among some Bantu tribes, but a girl or woman must work her
hands before milking if she is menstruating.

[88] *Conception.*—There is a general belief (as already mentioned) that conception
can only take place if there has been full sexual intercourse during the five or six
days immediately following the menstrual period, and although there is no special
teaching about this, girls grow up with this knowledge and take care not to allow full
intercourse during the few days immediately following menstruation. Occasionally,
of course, a girl does allow sexual intercourse at this time, either because she is
carried away by sexual desire, or because she deliberately wishes to conceive for
some reason or another (see Wanderbend). In the former case she will try to
bring about abortion.

[89] *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion
she seeks for the man whom she considers responsible and tells him about it, and he is
bound to help her.

As long as her condition has not been discovered by her parents she may try
to induce abortion, but as soon as her condition is known to her parents she must
no longer try to do so. Abortion is brought about by means of a stick of special
wood which can only be obtained from a medicine man. This stick is inserted into
the vaginal passage and is said to be an absolutely certain abortifacient. This is the
only method used.

[90] *Penalty for Conception.*—If an uninitiated girl conceives and her condition
[91] becomes known she must immediately be initiated. In the normal way (see below)
[92] her initiation would take place at her mother's home and the necessary arrangements
would be made by her father, but if she is to be initiated because she is with child
the onus of all the arrangements is shifted on to the man who is responsible for the
girl's condition, and the ceremony must take place at the man's village. This does
not, however, mean that the man will have to marry her because of this, but he
may do so should both parties desire it. He only must the man arrange for her
initiation and pay all the costs of the ceremony, but he must also give one heifer
and a quantity of beer to the girl's father, "because he has prevented the father

[For ceremonies that initiate the Masai youth into the status of both legal majority and adulthood see category 561.]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

claim to belong to them five elsewhere. Merker gives as the principal divisions these provinces, Kisongo, Loita, and Olbrugge. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbrugge, also known as Elbrugge and Purko, are both subdivisions of the Naivasha district, of which the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Matapato, Kisonko, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kibwezi), also called Ol-doinyo-lo-l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 28; for details) are said to belong to the same age, and are known collectively by a distinctive name, such as "the White Swords" or "the Invincibles." After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition* (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avoid. The direct physical evil is comparatively, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

* It is said that among the Naisa, Sori, and Siklisi there are similar customs of free love.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be one not unmixed with drunkenness. Proverb No. 6a (p. xxii) 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' [illegible] vivid picture of the Masai paterfamilias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a very, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can scarcely hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by those of military connexions and desirous only of military glory. Retirement from this band of warriors as a chief was impossible, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laiko (more correctly Ol-oiboni; see p. 72n. &c.). They all belong to the Kidongi family of the Ilmoran class, and are said to be descended from a personage called Ol-le-Kwenya, who came down from heaven and was found by the Ilmoran sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

Z:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

the warriors with milk. This seems to be the feast that Merker refers to as "the feast of the circumcised boys – *el ogor lil eljik emurale*". The newly circumcised remain in his mother's house until the wound is healed. [FL1 [94]]

c) At this stage all the newly circumcised assemble from the various villages; they form small bands and go around shooting at small birds with special small bows and arrows. They wear women's clothes, women's ear-decorations (and also by elders) and a special headdress to which they append the birds they kill. During this period they are called *ar ebolio*, pl. *i-ebolio* – the recluse, and are under strict regulations: At evening they must return home and enter the village before the cattle. They must not drink blood or eat meat or touch it with their hands. They must not wash. They must avoid girls. They must not fight with, or be struck by, any other; if this happens, milk must be put on their heads. They must not go out in the daytime without their special headdress.

The period of segregation may last for some months. At the end by order of the elders they are shaved by their mothers (hence they are called the shaved ones – *el kerset*, pl. *el kerset*) and presented by their fathers with the arms of the warriors, a spear, a sword and a shield. It is a peculiar distinction of the initiates to let their hair grow and to twist it into a pigtail of which they are very proud. * At this later stage the initiates will be called *el moran*, pl. *el moran*, i. e. those who have been circumcised. [95] [96]

It is generally stated, and apparently even by the Masai themselves, that as soon as a youth is circumcised he becomes a man. The evidence shows clearly that the expression "becomes a man" does not describe the real social status of a newly circumcised. Even if the statement is taken to mean that through circumcision a boy has attained the status of a man, and therefore is entitled to full participation in Masai social life, the statement is at variance with the evidence. As a matter of fact no Masai is allowed to marry soon after circumcision. In order to marry he must be at least a senior initiate, i. e. a member of the senior age-unit. * A newly circumcised (i. e. a junior, and to some extent also a senior initiate) may [FL1 [97] [98]]

* On this particular custom, cf. Merker, l. c., p. 149; Sasse, in *J. R. A. I.*, 1926, v. 56, pp. 49 ff.

* The seniority of the age-units is discussed in the next paragraph. With reference to the last above we note that even when a senior initiate marries, he is not allowed to beget children, as this is the privilege of the elders. See Merker, where Lemuti and Pus are cited.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 not possess cattle of his own (cattle are the property of his father), and therefore he cannot form his own family which would not help it. He may not eat meat in public; he may not drink milk on his own, but only with some of his age-unit mates; he is expected to live in a special segregated village; and as a member of the age unit, he is, individually as well as corporately, under the social and political authority of the elders. Finally, from the military point of view, although he is allowed to take part in raids or other police action, he is still considered a learner and is expected to accompany the senior initiated in order to be trained properly.

The expression, thus, "becomes a man" is merely an anticipation of a status not yet attained but towards which the first approved step has been taken.

[514]

561 554 Individual initiation causes a boy to become a full member of an age-unit, and thereby he is introduced into the active and governing sections of society. Indeed, in the present cultural situation of the Masai, circumcision is the main ceremony of individual initiation, and is the essential requirement for unit and class membership. However, the initiate's membership into a definite unit or class derives primarily not from his individual initiation, but from the initiation being performed during the period for the initiation of that unit or class. It is, therefore, from finding himself within a definite period that a Masai initiate obtains a definite place in the structure of his own society. Indeed, this structural effect of time on the initiate is the essential point of the age-system as a phenomenon relevant to social structure. [*]

564 V – THE AGE-UNITS AND THEIR MUTUAL RELATIONSHIP [**]

The two age-units of a class are called respectively "the right-hand circumcision" (*emurate olaiser*) and the "left-hand circumcision" (*emurate olodepesi*). These two units are instituted in turn, in succession of time, 'the right-hand' first, 'the left-hand' second. That succession is usually expressed in terms of seniority, as we see below.

Each age-unit, however, is further subdivided. These subdivisions are formed by all those who have been individually initiated

561 554 from the senior moran". To these, according to MERKER, p. 82, should be added the formation of the initiates' segregated village (manyatta).*

561 578 The behaviour set up by seniority relationship is one of open rivalry between the two adjacent units. Members of the senior unit look down with contempt on those of the junior unit and the latter retaliate as best as they can. The conflicts and clashes which ensue seem to be accepted as a normal social institution and in fact they are looked upon with favour.

FORBOOKE,** notes that initiates make no formal demand for the above mentioned privileges of seniority. "The juniors", he writes, "will assume one of the privileges, and when met by a band of seniors will promptly be beaten up and retreat. This process continues till wounds become frequent in these affrays. When the seniors feel that they are on the point of losing their ascendancy, they graciously hand over these privileges to the juniors, who may then proceed to the Uasin ceremony". A detailed description of the same process is given by MERKER.***

561 The claim for the privileges of seniority and the Uasin ceremony mark the final stage of the official period for performing individual initiations and therefore for instituting the age-unit. There is a certain regular interval between these ceremonies, which our informants try to estimate in terms of years. It seems, however, that the deciding factors are, the adjustment between the senior and junior initiates, the former handing over the privileges of seniority to the latter, and the agreement of the *piron-elders* that the proper time has come for closing the age-unit period.

VI – THE FINAL INSTITUTION OF THE AGE-UNIT*

561 The final institution of the age-unit is brought about by the performance of the Uasin ceremony. This is described by FORBOOKE,** as "the ceremony of promotion from junior to senior

* FORBOOKE in his chart, p. 94, puts this immediately following the period of the individual initiation (circumcision) of each unit.

2:Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood". He also states that *Uasin* "is probably the best known and most nineteenth ceremony in the Masai age-grade system".

Uasin is not performed at a single place for whole Masailand, but in every territorial section or group of sections.* It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull.

a) The first stage takes place in a special hut called *singira*.* Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY,* another test is performed inside the hut aiming at detecting those who have entered surreptitiously.

In the annual report of the *F.A.D.*,* we read that every candidate is expected to give "an account" of his past life. "The importance of the *E-Uasin*" states the same report, "lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe". "The *O-Singira*" says FOX,* "gives the warriors permission to have sexual relations with initiated women".

b) The nomination of the ceremonial leader (*ol oonoi*, pl. *il oonok*, or *ol oiwo*) takes place inside the *singira* hut. The elders

* LEAKEY's statement, p. 194, that at the *Uasin* "all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present" is emphatically denied by FOX, p. 600, and FERNANDES, p. 28. According to FOX the following sections perform it: (a) Purko. (b) Loita and Siria. (c) Dorobo. (d) Kaputei, Loitokitok and Matapato. (e) Loitokitok. (f) Kisongo. And FERNANDES says that the *Uasin* is administered "by sections or groups of sections" and is attended by many warriors as possible, "but by no means all". Moreover, on FOX, FERNANDES's authority, recorded that the *Uasin* was held by the Purko, Kisongo, Loitokitok and Dorobo on the Kisongo. The Siguroi, Matapato, Kaputei and other divisions where it ended their hut.

* There are contradictory descriptions of the *singira*. Someone states that it is a "very big hut"; Kenna says "not so big"; Simon "small"; Leakey and Fox state respectively "as mushroom", and a "very large" hut. Probably it all depends on the actual number of the initiates involved.

* LEAKEY, l. c., p. 188.
* *F.A.D.*, p. 31.
* FOX, l. c., p. 600.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

great political importance, in reply to which the elder indicated that such did not necessarily follow as "we can always tell the bravest what order to give".

c) The sacrifice of a bull is then performed with great ceremonial. HOLLIS,[**] describes the contest in which the candidates compete in getting hold of a horn which was previously thrown into a fire.

With reference to this sacrifice a special officer is appointed. He is called *ekewanyana*; he has a ceremonial status and must prepare the hide-strips from the skin of the bull. He is also described by the author of *M.E.* 68 as "the official charcoal-maker of the *mpuat*". His functions, however, seem to be limited to Uasin.

Great emphasis is laid by WERNEROWS,[***] on what he calls "the fire-drilling ceremony", which as Fadewoke also says, "must be fast in the seats". The ceremony is described by Whitehouse in connection with the first erection of the segregated village of the initiates or *mangatia*.[****]

The fire is ceremonially lighted by the elders, and it must be carried into the new dwellings of the village. The next morning after this ceremony, the candidates who have become senior initiates are blessed, and prayers to the black God are offered for them.[****]

At the seats, the senior first, and then the other initiates, shave their hair. Pig-tails, however, are again fitted after the ceremony.

Some (four or five) months after the ceremony, when the senior

[**] HOLLIS, l. c., pp. 300 sq.

[***] WERNEROWS, l. c., p. 100

[****] This circumstance supports HANCOCK's statement that one of the privileges demanded by the junior initiates is the building of their own segregated village, l. c., pp. 30 sq.

[****] It is of some interest to reproduce here from WERNEROWS, the prayer recited by the elders on this occasion. It shows clearly how the senior initiates are about to enter the most important stage of their life as members of their society. This is the prayer: " Be trustworthy, Oh, return safely, O God. — Receive ye men and of God. — May the illness pass you by. — With those who love us that they may find dry river on their passage. — Lenana and Sidai and Whatian with the safe return. — Grow up. Receive government of your lands. Become as great as the Kikuyuyan. — Be the fathers of my children, and bring them up well. Have many cows. — May God love you. May the evil eye of the night guard them. May our age be the longest ". The expression of the first verse " return safely " probably refers to the raid which follows rituals. Lenana, Sidai, Whatian were prophets.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[illegible] initiates have returned from a meat festival in the bush a raid is organized. According to HOLLIS this is called, "the (fulfilment) of the vow" or "the (selection) of the child" (*Ee-ee'e-dere ardi Ee-e'wuki*).[illegible]

The main reason for this raid, is the strong desire of the new senior initiates to show their ability and enjoy the satisfaction of the military efficiency they have reached.

At the waste the age-unit assumes a new name.[illegible]

[illegible] *Uwate* if seen with relation to the social status of the initiates is undoubtedly a promotion ceremony. *Junior* become senior initiates. But if we consider the ceremony in connection with the institution of the age-unit, we find that *Uwate* brings together all those who have been individually initiated during previous years. In other words it merges into one body the three minimal divisions, it gives them a corporate status and institutes the age-unit. The performance of individual initiation is not ended with *Uwate*. It still takes place, but irregularly, and all those initiated at this time form the fourth minimal division, *el oingoro*, as reported by HOLLIS.[illegible] The ceremony closing the age-unit's legal period for individual initiation is *Endengoro*, which, as we have seen, is performed by the *piron-ildoro* of the next age-unit.

541 Thus the institution of the age-unit is brought about by three different ceremonies, namely, *Enghata* as the opening ceremony, *Uwate* as the instituting ceremony, and *Endengoro* as the closing ceremony.

The closing value of *Endengoro* is due to the negative aspect of this ceremony as we noted.

The point raised by the interval between all these various ceremonies is most confusing. The reason for this is that the interval is defined by all our authorities in terms which are foreign to Masai age-system. Therefore, we must accept the number of years which they suggest as more or less broad approximations.

[illegible] "The (fulfilment) of the vow" is not a special term for the raid which follows *uwate*, but is applied to any raid undertaken after a long peace. Cf. *Grazia*, I. c., p. 90), n. 3.

[illegible] *Fox*, l. c., p. 108, notes that "the present (1908) age-unit of Purko warriors was called *Ilchagi* prior to the *Il-Uwate* when they took the name of *Il-Ildonyo*.

[illegible] *Fosbrooke*, l. c., p. 91, speaks of a "hiatus" between the age-units and we think that such hiatus is that period which runs between the *Uwate* and the *Endengoro-Enghata*.

Z: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Thereupon we infer that the function of the age-unit is primarily social. Its scope is to organise the initiates into a corporate body, separate and distinct from other similar bodies, and to lead them, both as individuals and as a corporate whole, towards a full social and economic independence and towards taking a full share in political life.[xx] 54 | 62

IX – THE CEREMONIES FOR THE INSTITUTION OF THE AGE-CLASS

The institution of the age class is brought about by the performance of some special ceremonies, of which the most important is the spokes' purpose. Before this takes place, other ceremonies, such as "the slaughtering of the ox with jousting" (el pelon / el boi), "the spokes of milk" and "the spokes of meat", must be performed by every initiate. Through these performances the initiate obtains the status of an elder. The owner is the forerunner of all his age-mates. As was seen, at Uasin, he is given the status of an elder, and soon after that he settles down as a married man. 54 | [104]

Lugard,[xx] states that a warrior (i. e. an initiate) who marries cannot have sexual intercourse with his initiated wife.[xx] Fox,[xx] qualifies Lugard's statement and says that such a case "is hypothetical, and does not occur in practice", because usually the senior initiates marry after the spokes of milk.

Hobley,[xx] is our only authority for "the slaughtering of the ox with jousting". The ceremony consists in a meat festival offered by the candidate to the elders of the neighbourhood of his father's village. Other initiates share the meat, but are apart being still under the restrictions of junior initiates. A spear fight follows in which the initiates and women take part. Finally before the sun sets, "a married man with his chief wife come near to their hut and addresses him with the following words": [104]

[xx] Each age seems to be distinguished from the other by the particular [103] stage. Fox, l. c., p. 400, shows that almost all of these stage are in a "rather complex language".

[xx] Lugard, l. c., p. 300.

[xx] Lugard was mistaken indeed in his information; he also states l. c., p. 300, that "the sexual transits from the junior warrior stage to the Elder's stage takes place without any ceremonial", which is not correct. [104]

[xx] Fox, l. c., p. 400.

[xx] Hobley, l. c., pp. 100 ff.

6:Thomson K.-3 (1883-1884)1887
FL12 Masai FL12

arm. A beaded belt confines it round the waist, leaving only one limb partly exposed. Frequently it is slipped off the shoulder, and depends entirely from the waist, leaving the breast exposed. Their ornaments are of a very remarkable nature. Round the legs from the ankles to the knees telegraph wire is coiled closely in spiral fashion. So awkward is this ornament that the wearer cannot walk properly, she cannot sit down or rise up like any other human being, and she cannot run. Round the arms she has wire similarly coiled both above and below the elbow. Round the neck more iron wire is coiled—in this case, however, horizontally—till the head seems to sit on an inverted iron salver. When the leg-ornaments are once on, they must remain till finally taken off, as it requires many days of painful work to fit them into their places. They chafe the ankles excessively, and evidently give much pain. As they are put on when very young, the calf is not allowed to develop, and the consequence is, that when grown up the legs remain at a uniform thickness from ankle to knee—more extended ankle, in fact. The weight of this armour varies according to the wealth of the parties, up to thirty pounds. Besides the iron wire, great quantities of beads and iron chains are disposed in various ways round the neck.

Such, then, were the people that now greeted Moran, who, being a novice, had to suffer a good deal of chaff from both sexes. He was, however, soon initiated into the mysteries of a warrior kraal, and had seen a bit of life. The abstinence that imaginable was the rule. He had to be content with absolutely nothing but meat and milk. Tobacco or snuff, beer or spirits, vegetable food of all kinds, even the flesh of all animals except cattle, sheep, and goats, were alike endowed. To eat any of these articles was to be degraded—to lose caste; to be offered them was to be insulted in the deepest manner. As if these rules were not strict enough, he must needs not be seen eating meat in the kraal, neither must he take it along with milk. So many days were devoted entirely to the drinking of raw milk, and then, when carnivorous longings came over him, he had to retire with a bullock to a lonely place in the forest, accompanied by some of his comrades, and a Dilio to act as cook. Having scrupulously made certain that there was no trace of milk left on their stomachs by partaking of an extremely powerful purgative, they killed the bullock either with a blow from a rungu or by stabbing it in the back of the neck. They then

6:Thomson K-3 (1883-1884)1887
F'L12 Masai F'L12

opened a vein and drank the blood fresh from the animal. This proceeding of our voracious young friends was a wise though repulsive one, as the blood thus drunk provided the salts so necessary in the human economy; for the Masai do not partake of any salt in its common form. This sanguinary draught concluded, they proceeded to gorge themselves on the flesh, eating from morning till night—and keeping their cook steadily at work. The half-dozen cows were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to resume the milk diet.

If they lived an aerobic life in the matter of food, they could not be said to do so in other ways. Life in the warriors' kraal, as may easily be conceived, was promiscuous in a remarkable degree. They may, indeed, be described as a colony of free lovers. Curiously enough the "engagement" system was largely in vogue, though no one confined his or her attentions to one only. Each girl, in fact, had several sweethearts, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Dinka and El-moran, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

Till a war-raid was planned, Moran, our interesting prodigal, found he had nothing to do but make acquaintance and amuse himself with the girls. His cattle were looked after by some poor neighbours, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no force for protection was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his morale by the peculiar mode of dancing described in the Tavern chapter. Unlike sugar-tellers, they led what might be called a serious life. They had no rollicking fun, no moonlight dancing, no lively songs, no thundering drums. No musical instrument whatever enlivened the Masai life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything locked up in silence.

Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Laiyoni* and a *Laigonani*.

[18] As only those candidates who belong to a given village may be operated on in that village, it is seldom that there is more than one circumcised at a time, but should there be two or three candidates belonging to a single village they would be circumcised together on the same day at the same time. There is no elaborate ceremonial accompanying the operation or preparatory to it. A boy will continue herding his cattle until the late afternoon of the day before that fixed for his circumcision. He is then hurried back to the village and has his hair shaved off by his mother, and has new sandals and a new skin cloak given to him. This cloak must be made of the skins of four cows sewn together, and will be worn the following day during the operation. The actual operation takes place next day, either early in the morning or in the middle of the day. If it is in the morning, the cattle are kept in the pen until the ceremony is over, but if it is in the middle of the day the cattle must be brought into the pen and kept there during the ceremony, for it is absolutely essential that the cattle shall be in their enclosure during the whole of the ceremony. Sheep and goats are not included in this rule. The boy (or boys) sits on an ox-skin in the courtyard in front of his mother's hut wearing his new cloak and a stick, and the operator performs the operation with a special small knife without any elaborate ceremonial. The boy then retires to his hut to convalesce. A hut now is lifted for the patient, who is led on most bedded to hut and we place cold hot, "so that he may get well quickly." After about five or six days the other boys in the district who have already been circumcised and have recovered, call for the boy, and he joins their band for the period of their novitiate.

The Novitiate.—The period of novitiate varies in length of time, as a boy must remain in the novice stage from the time that he is circumcised until every other candidate has been circumcised too. Usually a period of about two years elapses between the time of the last existing ceremony and the time when the last candidate has been operated upon. Then the group undergoes the hair-shaving ceremony which marks their transfer from the novice stage to the warrior stage; thus, the last boy to be circumcised may only have a few weeks in the novice stage, while others may be about two years in their stage. During the novitiate, there are certain rules and regulations which must be observed by the novices. They wander about the country in bands armed with bows and bird-arrows, visiting more especially those villages where they know that both candidates have just been circumcised, and collecting skins in their groups. During the whole novitiate period the novices must not cut their hair at all, nor may they indulge in any form of sexual intercourse, nor may they use red ochre, but only white for on their bodies. They are required to shoot as many birds as they can, and to skin them and stuff them roughly with grass, and to show to their hair as a decoration. Bird and cows skins are added to this head-dress as the novice gr ow, until at length a boy has a complete cap of stuffed bird skins. Certain birds must on no account be so used, sacrificial birds such as pigeons, doves, and

[illegible] attached to the matter to deal with them. In fact, we may say that for the girls [illegible] the death before puberty and marriage (with as such period of sexual prohibition as the boys have during the series stage) until they are initiated. There is one important restriction, however, as far as the girls are concerned, and that is that sexual intercourse with married men is entirely prohibited before initiation, and is considered a very serious offence.

[illegible] *Menstruation.*—Menstruation is not looked upon as causing uncleanness, and there are no special rules and regulations attached to this condition, but, on the other hand, during the actual menstrual period a girl should refrain all invitations to dance with men or boys. There is no restriction of work during the menstrual period as there is among some Bantu tribes, but a girl or woman must work her hands before milking if she is menstruating.

[illegible] *Conception.*—There is a general belief (as already mentioned) that conception can only take place if there has been full sexual intercourse during the five or six days immediately following the menstrual period, and although there is no special marriage about this, girls grow up with this knowledge and take care not to allow full intercourse during the five days immediately following menstruation. Consciously, of course, a girl does allow sexual intercourse at this time, either because she is excited away by sexual desire, or because she deliberately wishes to conceive for some reason or another (see Wanjalakwali). In the former case she will try to bring about abortion.

[illegible] *Abortion.*—If a girl finds that she has conceived and wishes to induce abortion she tends for the man whom she considers responsible and tells him about it, and he is bound to help her.

As long as her condition has not been discovered by her parents she may try to induce abortion, but as soon as her condition is known to her parents she must no longer try to do so. Abortion is brought about by means of a stick of special wood which can only be obtained from a medicine man. This stick is inserted into the vaginal passage and is said to be an absolutely certain abortifacient. This is the only method used.

[illegible] *Penalty for Conception.*—If an unmarried girl conceives and her condition becomes known she must immediately be initiated. In the normal way (see below) her initiation would take place at her mother's home and the necessary arrangements would be made by her father, but if she is to be initiated because she is with child the cost of all the arrangements is shifted on to the man who is responsible for the girl's condition, and the ceremony must take place at the man's village. This does not, however, mean that the man will have to marry her because of this, but he may do so should both parties desire it. He only must the man arrange for her initiation and pay all the costs of the ceremony, but he must also give one bullock and a quantity of beer to the girl's father. " Unless he has prevented the father

from having the honour of the hand of her initiation." Should the man decide to marry the girl, this ladle is counted as one of those which must be handed over for the marriage transaction (see Marriage). [illegible]

Girls' Initiation—Among the Masai girls are initiated singly and not in groups, nor are they initiated until a good many years after puberty, for as soon as a girl is initiated she must be married, and cease to have any intercourse with the unmarried boys. Except under the circumstances described above, a girl is not initiated until her breasts begin to droop to a marked extent. As soon as this is noticeable, her mother informs the father, who makes the necessary arrangements. If the girl's mother is living at the time at a manyatta with one of her sons, then the girl's initiation will take place at the manyatta, otherwise it will take place at the home village. The essential point is that initiation must take place in the mother's hut (or in the hut of another of her father's wives, should her own mother be dead). The father comes to the place when the day of the ceremony has been fixed and here is prepared a new called *ekikiyapata* to daughtered either before the actual operation or just after it. This is the "*ena ka ekikiwarung*" and is supposed to insure fertility. This ena is eaten by all those present at the ceremony. The actual operation has performed by an old woman, who is a skilled operator (she may be either a Masai or a Dorobo), and the girl who is a skin inside the hut during the operation. The operation is said to be the same as that used by the Kikuyu on their girls, and this is a form of clitoridectomy, but exact details cannot be obtained from the men. As soon as the operation is over the operator makes the girl to "choose her of the blood spilt" and a ena is then daughtered and given to the operator. This ena is called *ekiyapat*. Then a ena is called *ekiki* *ekiwarung* to provide meat and fat for the girl during convalescence.

Shaving Ceremony—Finally when the girl is healed and before she can go to her husband's village, a ena is called *ekiki ekiwarung*, which is the "ena for the shaving," and at the same time the girl's head is shaved by her mother.

Part V.—Marriage

Engaging—Marriage is always compulsory as far as sub-clans are concerned, but marriage within the sub-clan is allowed. This rule not only applies to marriage but to all forms of sexual intercourse. No man, whether married or unmarried, may at any time even have sexual intercourse with any woman, girl or child of his own sub-clan. This is the strictest rule of all Masai sex regulations, and the penalty for any breach of this rule is very severe indeed (see Odum).

A woman remains a member of her own sub-clan even after marriage, but her children belong to the sub-clan of her husband.

Divorce—Amongst the Masai there are two usual methods of divorce:—

(1) Divorce of unborn children.
(2) Divorce of infant girls.

[illegible] L. S. B. Leakey —*Some Facts on the Mount of Kenya Colony*

[illegible] The method of betrothing an unborn child is as follows:—A man or boy wishing to do so asks a pregnant woman (provided, of course, that her husband is not of his own sub-clan), and goes to her and sustain her on the stomach, either with fat or with red ochre mixed with castor oil. By so doing he pledges that if the child born is a girl he will eventually marry her. Should the child be a boy he is bound to it in friendship for life. In the event of the child being a girl he must, from birth onwards, present the child with small gifts from time to time, and as the girl grows up supply her with such necklaces or ornaments as she may demand from him. A man or boy wishing to betroth himself to an infant girl does so simply by giving the child a necklace, and from then on he must supply her with such ornaments as she may require. Of course, a man must love of all ornaments that the child —whether unborn or an infant—is not already betrothed. A man may cancel a betrothal if he wishes to do so (but he cannot break his pledge of friendship with a boy in the case of a boy being born to a woman whom he assisted when she was pregnant), and the father of a girl may cancel betrothal by refusing to drink any more of the suitor's beer. If a girl, as she grows up, decides that she does not wish to marry the man to whom she is betrothed, she can easily avoid doing so by arranging with one of her lovers to have intercourse with her just after menstruation, and thereby conceiving. She then has the option of marrying this lover should he be willing.

[illegible] *Formal Marriage (as a First Wife).*—It is clear from the above description of betrothal that it is unlikely that a girl will reach her time for initiation unbetrothed. Should she do so by any chance, her father would at once make every effort to find her a husband, probably from among the older men who already have several wives. For could the girl object in any way, for to be initiated and not be married directly afterwards would make her the laughing stock of all the neighbourhood. When a girl is to be the first wife of a man, it usually means that her husband is to be still a member of a warrior group. This, of course, means that he cannot in the normal way live with his wife for some time. This fact, however, in no way interferes with the marriage ceremony and consummation, the presence of the husband not being considered in any way necessary.

[illegible] The respective fathers of the girl and of the man make all the arrangements and consultations when the girl is initiated (see below), and as soon as these have been completed, and the girl has recovered from the operation and been through the dancing ceremony, she goes to the village of her husband's family, where she has already built herself a hut (or had a hut for her by her friends).

As a married woman her main duty in life now is to bear children, just as it was her duty before initiation to avoid conception. If her husband is still in the warrior class and may, therefore, not have any sexual intercourse with her, this is no hindrance to her in performing this duty, as she may now have intercourse with any married man of sub-clans other than her own.

[illegible]

As stated above, Ol Piwa means a foreskin. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the Ol Piwa generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has constituents political as well as domestic importance.

Exception.—The rule is the rule for a single exogamic, except when the whole age-group of a single area combine to form one exogamic for some ceremony, e.g. the *Il Chum*.

For some years the policy of Government was directed towards suppressing the exogamic system, and exogamies were prohibited, such exogamic being supposed to live in his father's village. With increasing control and enlightening of the tribe this rule has been somewhat relaxed, and the exogamies are now commonly allowed to have exogamies provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to exogamies, and it is now rather difficult at times to know exactly what they were. The main political effect is that exogamies last for a much shorter period than formerly, and more men marry and become elders within four or five years of their circumcision.

Nowadays the parents are somewhat unwilling that the girls should live in the exogamies, and as there are only a few of them to be seen there.

A exogamic usually differs considerably from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

See 5.D.—The word written by Mr. Leakey *mutubio* would perhaps best be spelt as two words *Fumbi ipuli*. *Fumbi* is a second person singular imperative of a dative verb (see Kidia, p. 77) which I have never heard except as described by Mr. Leakey. *Ipuli* means "ear" or "ears."

When a man has been accepted by a girl who has been so ultimately *kidia* can he hand to live with the tips of his forefingers and thumb touching to form a circle. She is then supposed to touch the circle so formed with her forefinger. This is regarded as making her acceptance binding.

It is a great disgrace for a mother to cause an uninitiated girl to conceive, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "Shed his spear."

The Il Chum Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Mount, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above.

The Lala and Kisa B-Fanis ceremony took place in July, 1938, and lasted three days. They invited me to it, but, owing to pressure of political work, I was unable to arrive till the morning of the third day at about 10 a.m. (P). [illegible], Figs. 1-6, and P). [illegible], Figs. 1 and 2).

The Gusii definition of the B-Fanis is as follows:—

"The B-Fanis is a religious ceremony of blessing of the age-group, after which the warriors have leave to marry.

"The O-Ringiro gives the warriors permission to have sexual relations with initiated women."

The warriors were dancing on the time (P). [illegible], Figs. 1 and 2). After about an hour they went off to a spot about a mile away in the bush, where I was informed that they sacrificed a bullock as a sacrifice.* They returned about 5.30 p.m., about twenty of them being dressed in a manner similar to that of the three bachelorettes (P). [illegible], Fig. 3). They danced round the O-Ringiro hut, and those warriors who were entitled to enter it led their families up to enter some one-drug ex-h. The warriors then squatted down in a close group in the centre of the compound, while some elders walked round them drinking honey wine and spraying it out of their mouths over the group as a blessing. Others of the elders sat by the O-Ringiro hut and refreshed themselves with honey wine. It was at this point of the proceedings that the age-group of warriors was named *Omoriri* (from rock wine, above). This terminated the festival.

The chief bachelorette in the O-Ibaro, but I cannot say what part he takes, having arrived as near the end of the ceremony. He is held in great reverence for some ailments, and it is unlucky for the age-group if a sickly bachelor bite. He must not take part in political affairs. He is always spoken of as O-Ibaro, and his son, when he grows up, is known as the son of O-Ibaro. (P). [illegible], Fig. 5.)

There is a minor official called O-Ibiro engiro. *Engiro* is a thong of leather. If my spelling of the first part of the title is correct it would perhaps mean "He who spins the thong." But there are several words from which it might derive, and I have no knowledge of his duties to assist me in checking my spelling of the name.

O-Ringiro (Ringiro).—Being ignorant of B-Kenya I had been puzzled by this word prior to reading Mr. Lindsay's article. At the Lala B-Fanis it was built just within the eastern edge of the village. The village consisted of a circle of huts about 600 yards in diameter. I looked in to the O-Ringiro, but it was too dark to see anything. It was made of one-drug plaster like an ordinary hut, but was much bigger. Ranged against the wall outside were the heads of numerous cows which the warriors had slaughtered.

I was informed that 100 of the warriors had not had sexual relations with initiated women and could therefore enter the O-Ringiro. After the B-Fanis the

* Mem. Subsingiri the general word for a sheep.

warriors may have sexual relations with initiated women. This is regarded as being the first stage in a warrior becoming an elder.

The warriors have their heads shaved—usually by their mothers—at the close of the E-Unto ceremony, but they allow the hair to grow again, and plait it into a pig-tail when long enough.

Milk Drinking by Warriors.—A warrior may not drink milk unless it is handed him by another of his age-group. They must therefore always go about in parties of two or more. The procedure on arrival at a village where they want some milk is as follows :—

The warriors enter the village and stand in the open space within the circle of the huts till one or more of the old men come to greet them. They ask for a hut of their age-group, or, failing that, a hut of an elder of their O-Fiyo. On being shown a hut to enter they go in and sit down on a bed or the stool, and wait till milk is handed to one of them (for description of hut see p. 408 E.). He shakes up the milk, removes the rag of the gourd, and hands it to his companion, who drinks it. If only two gourd is brought they share it, handing it from one to the other. If a second gourd is brought the warrior to whom the first gourd was originally handed may open it and drink it himself provided that he has given the first gourd to his companion. Drinking after a drink of milk is a sign of repletion and is good manners, showing the guest's appreciation of the hospitality of his host.

O-Fiyalaw of Milk.—This ceremony is performed by each warrior individually. He is given milk by an elder in his mother's hut, and drinks it by himself. He shaves his head and then not grow a pigtail again. Thereafter he may drink milk by himself. He usually marries very soon after this ceremony, and is no more regarded as a warrior after it. The ceremony usually takes place somewhere a year or two after the E-Unto owing to Government policy of reducing the period of warriorhood as much as possible. In the Pokot, most of the E-Sokoni have already performed their milk O-Fiyalaw, although there is as yet no left hand age-group for their generation.

I have heard it said that in some tribes there is a ceremony of handing over warriorhood from one generation to a junior one. Among the Sumi there was no such ceremony. When the young warriors of a new generation became strong enough they fought and defeated the old men, taking on the warriorhood by force.

Meat Feasts.—No man may eat meat which has been touched by an initiated woman until he has performed the second O-Fiyalaw ceremony, called the O-Fiyalaw of meat. After that he may eat meat which a woman has touched if he likes. The E-Sorcoret and E-Kinty age-groups of the Pokot were said to be going to have their meat O-Fiyalaw in June, 1930 ; but I left Africa before it was due, and therefore cannot describe the ceremony.

A man of the generation immediately elder than the warriors must not be seen eating or drinking milk by a warrior until one of the warrior age has given him a bullock.

Marriage.—The warriors may not marry till after the *E-U'nate*, and do not usually do so till after their first *O-Ey'nakar*. The case stated by Mr. Leakey,[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. 561 [561] [584] [585] [586]

The cattle required for the bride-price are payable on the birth of the first child, and cannot be withheld if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where lives a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the conditions (see p. 392) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle. 583 561 [937] [584]

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation find that a man of another has had intercourse with one of their women. [978]

If a woman who has bornr children leaves her husband and lives apart from him, he waits till his eldest son is old enough, and then sends him to fetch her back. 586

A man may not have sexual intercourse with the wife of his full brother (mother's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister. 835

A husband and wife may not call each other by their names. 551 [593]

Father-in-law Mother-in-law Son-in-law Daughter-in-law	Must not be addressed by name.

Family.—The name for a family is *Ol Mawi*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Masainé* sinnt, he is proud of the fact. 602

Death and Burial.—Dead bodies are disposed of by the hyenas, except for those of *Laibons* or very influential old men. These are buried under cairns of stones. 764 [764]

[1] See p. 392 of this volume.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

553 and these old men. If it has not previously received a name, it may have been
852 called by the name of its father's father; but at the naming ceremony it receives a name which may be that of its father or a name not connected with any relative. People are also given nicknames referring to their physical or other peculiarities.
551 There is much uncertainty about Masai names; but every man has a patronymic, consisting of *O-le*, "son of," preceding his father's name; this he appears to assume after circumcision. Girls after circumcision may be referred to as *E-se*, "daughter of," preceding their fathers' name. At marriage, the husband gives his wife a new name. The practice of teknonymy is a regular feature. Before the circumcision of his eldest son, a man becomes known as "the father of" *Se-ntel-se*, i.e., if his son is called Sendeu, he becomes Menye Sendeu; his wife similarly becomes Ipuo Sendeu, the mother of Sendeu.

551 The name of a dead child, woman, or warrior is not spoken again, and if the
768 name is an ordinary word, that word is no longer used by the family. Thus, if a man called Ol-onono, "the gentle one," died, on his death the word *nono* would be replaced in his family by some such word as *pulpul*, "smooth."

Circumcision (E-murata)

881 Boys' circumcision ceremonies take place at intervals of about three years, and
304 the circumcision 'period is "open" for about four years. Though the operation may be performed on boys singly or in small groups, the whole number of those circumcised at the same time throughout Masailand forms an associating group corresponding in some degree to the Nandi *mat* (see pp. 31 and 49). Judging by the published accounts, circumcision was a much less prolonged and ceremonious affair than among the Nandi. Before a boy can be circumcised, the father must submit to what is called *ene-polosata e-nita*, "the passing of the fence." After making honey-wine, he stays alone in a small hut outside his kraal, dressed as a warrior. After four days, some elders bring him back to his kraal, where he is told to remove the warrior's clothes and become an old man. His son may then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the afternoon after this has been done an ox or sheep is killed and eaten by the warriors and elders of the neighbourhood. On the second day, the boy eats a tree called at
[824] this time *e-latom*,* which the girls of the kraal carry to the door of the hut [in which the boy sleeps?], where it is planted. On the third morning the boy gets up early and sits outside to get cold; after sunrise he is circumcised, the operator being often a Dorobo. From the fourth to the seventh day he remains at home, and then goes out, shooting with blocked arrows at the girls, and with other arrows at small birds
[894 which he wears hung from his head. This is his occupation till he has recovered;
292] during this time he is known as *o-ngolosi* and wears the dress of a married woman, including the *i-suratia* cut-rings, and an ostrich-feather on his head. After recovery he is shaved, given weapons and warrior's clothes, and becomes *ol-barneti*, "the shaved one," i.e., a junior warrior. Till his local company forms its *manyata*, he lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There are no special times for this. An ox or sheep is killed before the operation. During the period of recovery they are known as *e-ngolosi*, and wear on their heads a wreath of the Hyphaene palm, *ol-mirinian*, or of grass, instead of an ostrich feather.

Age-sets

561 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear type, that is, they do not work in recurring cycles and do not come into existence till they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis (1905), and Fosbrooke (1948), as well as from the Taveta age-sets (Hollis, 1901), that some at least of the names are fixed and recur. In 1939 the names Il-Kisale

* *Zizyphus mauritiana*; normally call-it *el-ulalei*.

class name, and be added with the next (or previous) group, the first being the right hand grade and the other being the left hand grade. After several years the junior warriors go through another ceremony and become full warriors. Their total period of warrior duty may be about 15 years. The warriors are distinguished by their hair style and spear.

The hair style involves a complicated plaiting of the hair with some combination of cards, pieces of bits or gut, bark, or sticks all liberally plastered with sheep or cow fat and red ochre. Gulliver (1958) has detailed the attitude and behavioral code and variations in style between areas.

The warriors' spear is often over five feet long. It has a long, narrow, double-edged blade, an equally long but round and pointed tail, and between them a very short wooden hand grip serving as a shaft. Warriors also carry a flat, double-bladed long knife or short sword called a *simi*. These useful weapons are carried at the waist in a red leather sheath. Originally the metal weapons were produced by metal-working tribes. They now come from England and the first thing a warrior does after buying a spear or simi is to file off the brand name. When in ceremonial dress or at war the

[101] [102] [103] [104] [105] [106] [107] [108] [109] [110] [111] [112] [113] [114] [115] [116] [117] [118] [119] [120] [121] [122] [123] [124] [125] [126] [127] [128] [129] [130] [131]

claim to belong to them live elsewhere. Rather given on the principal divisions these provinces, Kwanga, Lulu, and Ulungu. This is perhaps not according to Mawi tradition, but is not incorrect as a practical description of the present distribution of the tribe. The Lulu and Ulungu, also known as Ilungan and Pyche, are both subdivisions of the Nyamba district, of whom the former acquired importance by refusing to accept the present Lulua, Lunana, and following instead his brother Sandeya. Besides these districts, there are four class representing genealogical not territorial divisions: Alam, Malgana, Mukuna, and Mulelua. The Alam seem to enjoy a certain priority. The medicine men all belong to this class, which is specially connected with Mount Ngong (to the south of Kibwezi) also called Ol-dolepo (or 'Alam, the mountain of the Alam.

According to the social system of the pastoral Mawi the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 48, for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincible.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arm-and-ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition* (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Mawi kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or sometimes when waiting to initiation somewhat earlier, a warrior marries and settles down. If he

* It is said that among the Dadia, Boti, and Sidlish there are similar customs of free love.

INTRODUCTION

[illegible]

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's chief of ceremony seems to be seen and received with deference. Proverb No. 6 is said, 'Don't lie with your feet against a post like the father of many sons' meaning 'Don't give yourself airs' is a vivid picture of the Masai peer Genius taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments but a very sad according to our ideas most unbecoming custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can scarcely walk.

The military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or policy analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military consistency and desirous only of military glory. Retirement from the land of warriors as a chief was honourable, but seems to have been recognized as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oibon; see p. 170, fn.). They all belong to the Kidongi family of the Kisar clan, and are said to be descended from a personage called Ol-le-Kwanya, who came down from heaven and was found by the Kisar sitting on the top of Kenia Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

DIAGRAM IV. The overlapping rhythm in the entire complexity. [F1.14]

The Interrelations of Age-Classes. The rhythm of Maasai age-systems seems to allow for five contemporary classes. All these classes differ in status and power according to their seniority as well as the efficiency of their individual members. We may thus distinguish between the *junior elders* who are members of the last initiated class; the *senior elders* who are members of the next one above; the *old men* who might further be distinguished for they are the few surviving members of the other three classes above.

The *junior elders* "are mostly concerned with family matters, establishing their own gates, marrying and performing ceremonies to ensure the fertility of their wives."[19] In other words, their [F1.15]

[illegible] [illegible] are in the main of a private nature, and their [illegible] in tribal or public affairs is a minor one. They try to enhance [illegible] social status by increasing cattle, marrying older wives, and having their sons initiated.

[illegible] The senior elders have a full share in political life. It would even be correct to say that this is their privilege, and theirs is the class [illegible] in power. Their sons are ready for initiation. Therefore it is upon [illegible] that falls the duty of undertaking the institution of a new class by controlling and performing all the proper ceremonies. It is from such duty or privilege that the so called pirou relationship is derived. It is a mutual relationship by which, on the one hand, the elders pledge themselves to assist the candidates, and be their sponsors, and, on the other hand, the latter revere the elders' authority and follow their advices. Thus the pirou-elders control the main branch of social and political activity, namely the institution of a new class. And, because the initiates, both junior and senior, constitute the strongest body of the military force over this other branch of political structure, namely military organization and activity, falls to come entirely under the elders' authority. The peculiar nature of Maori society makes it out of place the search for individual political leaders, but if we want to express ourselves with usual terms, we could say that the pirou-elders are the true political leaders of the Maori.

[illegible] The three classes of the old men are the classes which have retired. In practice they take no further active part in political life, but are concerned with religious ceremonies in which their presence is greatly [illegible]. Their number is naturally decreasing and the few survivors of the last classes are generally dotards. When possible, these survivors, particularly the former leaders, are consulted when tradition is to be ascertained.

[illegible] Analysis shows that the prerogatives of the age-classes are common and proper to all their members, and it shows also that the number of class-members, after the class is constituted, is so closed as no member is any longer accepted into the class.

Junior elders succeed seniors in political leadership when the institution of a new class is officially opened. The phenomenon takes place through the rhythm of the age-system mechanism.

In this connection Fosbrooke,[illegible] speaks of a handing over ceremony performed by the senior and junior elders. "The sen-

becoming bald or developing gray hairs, but that he could not take the reputation from all properties or formally. From this, coupled with the fact that he could not take such liberties with his stomach, he gathered that he was not quite as strong as formerly. We can imagine how he would open his lack and look foolish on discovering this unpalatable truth. There was nothing for it but to marry, and become a staid and respectable member of society. He had seen his wild oats.

Casting about, he fixed upon a damsel after his heart. The preliminaries having been arranged—the number of bullocks to be paid, &c.—she was mated to him. There no question was performed on the damsel. Borrowed from his efforts, she had to wait till the solving season, as obedience of wife is an indispensable requisite to the honeymoon. Meanwhile, she allowed her hair to grow till it assumed the appearance of an old shoe-brush clothed up with thatching. Round the head she wore a band of cowries from which depended a number of strings, forming in fact the bridal veil. At last the happy day arrived, and the fond and we put upon the marriage by both parties disposing of their chain marriage, and substituting a double chain of copper wire arranged spirally. The lady she shaved her head, laid aside the garment of the Gibs, and clothed herself with two skins, one suspended from the waist, the other from the shoulder. Amongst of all, however, and strikingly indicative of the fact that he had exchanged the spear for the distaff, Moses had actually to wear the garment of a Gibs for one month. Just imagine what fun it would be in this staid and dignified country of ours, if a young man had to spend his honeymoon in a cast-off suit of his wife's outdoor clothes. What our friend's feelings were in this guise, I do not know, and this sometimes shocktle does not affect of conjecture.

And now Moses's wife (she was to use a band of young cattle-thieves, and as that he got them, he was not very particular as to the manner of it. He was not jealous, asked no awkward questions, and employed no spies. If a friend should visit him, he was hospitable to a degree not consistent with a high level of morality. We shall here probably follow his example of non-inquisitiveness; for we might find that the domestic affairs of our friend's household will not bear a too curious scrutiny.

He was now wholly a changed being—as indeed, who is not when he gets married? His stern rules of diet were

In connection with the decided belief of the Mount in a God, it may be noted that they have also some minor deity called Bulbulah—apparently, so far as I could learn, an earth spirit. They have faith in witchcraft, though the efficacy of the lybian, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Bulbulah, who works through him, and imparts magical virtues to nothing objects. Their conception of the Deity seems to be unmistakably vague. I was Bulbulah. My being was Bulbulah. Bulbulah was in the morning before. His home was in the shadowy secret of Kilimanjaro. In fact, whatever shrub, tree or strange or incomprehensible, that they at once associated had some connection with Bulbulah. Their prayers to him were incessant. Nothing could be done without leave of bowling, whether it was to seek direction where to slaughter their cattle, or to ward off a disease. The most sacred thing among them is the grass. Hold in the hand, or tied in a sprig to the dress, is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Food in the grass means the milk. No liberties may be taken with it. The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—calabashes being reserved by woodshoes. To hold it is a heinous offence, and would be accounted a sufficient reason for committing a murder. It is believed that the cattle would cease to give milk. The cows, it may be remarked, are never milked except in the dark.

When Smael married, life early dull after his martial experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time heretofore was chiefly occupied in storied and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hamlets where to buy grain. She, however, was in her element when a common came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

In Tom Mount's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire by the purpose of decking the new comer. At last the two dined for both of them, and one after the other, they formed the subject of horrible hyenas' laughter. Those days

Games.

Small Manel children collect pebbles or berries, with which they play at ombla and chung. They also build huts and hamlets in the sand, and they make square nest of bamboo. Little girls make dolls of the fruit of the *amangu-tree*[1].

[1] [illegible]

The boys play chung in the hamlet of ombla. They choose a quiet suitable, and pretend it is a hut. One boy stands by the door which the others go and hide. When the hider returns, the one who is standing by the door chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; negligently who manages to escape and touch the door has won. This game is called Gaulowa.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called *'a-dowa*. This game is called *ma-gaulowa*.

The women also play this game, but they do only care about it much. They have no boards, and make holes in the earth.

Dances.

The style Manel dances resembles that of Malabar, as Malagasi as Tamil dances resemble, nothing Europe. Dancers

The divisions of the day[1].

The Maori have various names for the divisions of day and night.

There is day (as compared to night) and evening.

The evening is the time when the cattle return to the kraals just before the sun sets (5 p.m.).

There is also the time called Nightfall, or the hour for gaiety (8 p.m.); this is the hour before people go to bed.

Then there is the night, midnight, and the time when the bullocks go to drink—this latter is the hour before the sun rises, which the Swahili call *Ibn Samei* (4 a.m.).

There is also the time called The blood-red period or When the sun decorates the sky: this is the hour when the first rays of the sun redden the heavens (5 a.m.).

Then there is the morning; this is after the sun has risen.

There are also the hours called The sun stands or is opposite to sun (midday), The shadows lower themselves (1-2 p.m.), and Afternoon.

[41] [1] The Dinka divide their day in [illegible] the same manner as the Maori (Kaufmann, *Schilderungen*, p. 131).

Free Translation.

Our grass which grows on Earth's broad back
We pray thee grant us without lack.
Almighty, 'tis thy gift we know—
The hills above, the dales below,
All were thine for their lord.
The cloud-wrapped mountain's grassy sward
Sun for thy rain, Heaven's dew,
Would yield us food for stall and byre.
This year we pray our cows may be
With ample shower's for weal and lee.

Approximately every three to six days caravans of old women, accompanied by a few old men and laden with maize, bananas, batatas, etc., arrive in the Masai kraals. Then there begins an hours-long haggling and bargaining with the customary market-woman shouting. Each one tries to sell her goods as advantageously as possible, that is, exchange them for just the articles that she needs. Often the caravans come from a distance of four to five days' march and then remain in the kraal for a couple of days before they set out for home.

881 in a long leather apron reaching to the feet (ol gelá, el gelání),
[292] which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before sunrise at a place in the vicinity of a kraal, chosen by the three or four operators needed each time. The warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pour cold water over each other, in order to become numb. The operation,
[752] which is professionally performed by old men, especially Wandorobo,
[887] is the following /the following paragraph has been translated from the Latin of the original source/:

881 After the outer skin of the penis has been drawn back and the
304 inner lamella of the foreskin nearest the back of the glans has been cut around with a knife, the glans lies in an elongated sheath, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an uvula (1).

1. The following should also be mentioned here /the rest of the footnote has been translated from the Latin/: In order to look cut (circumcised), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "ol jugi." The swelling glans prevents the foreskin from sliding forward.

[412] /63/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs apart on the leather apron spread out on the ground. After it, the wounded part
[752] is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who strides backwards for this, into his mother's hut and is poured on the ground there. An
[866] agent to stanch the blood is not used. During the circumcision
[626] itself the parents of the boy remain in their hut, for if the latter moans or cries out from the pain, they are punished with abusive

Spear, sword, shield, and club are the weapons of the warriors. [887] [714] Old people never carry the shield, rarely a small, to some extent cast-off spear, or an old sword, but for the most part only club and bow with arrows. They need bows and poisoned arrows for the defense of their own kraal or against predatory animals. The Masai [184] [224] impoverished through cattle epidemics, who live apart from the others and erroneously call themselves el dorobo, also hunt game with them. The bows (Fig. 36) are two-shanked, simply curved,

[342]

Building a large boma entails cutting a large number of trees. (Fig. 22) Where trees are thick in Western Masailand there are tsetse flies (Fig. 23). Consequently the bomas are constructed away from them in more open country, in open grassland near to hills or watercourses or in open parkland. Under such conditions a large boma can result in the clearance of larger woody growth -- for initial construction, subsequent repair, and for fires -- from an area ranging from about several dozen acres to a square mile.

361
*233
221

Fosbrooke (1948), Grant (1957), and Page-Jones (1948) have noted that the Masai normally placed their dry season bomas within about five miles of permanent water. One day they graze the animals to and from water, letting them drink. The second day they graze the opposite direction, and on the third day they return to water. Thus a rough circle with diameter of ten miles is grazed around each boma. In the wet season the Masai leave the boma, either setting up a new one in an area of good [887] grazing, or making temporary camps (Ibid.). Occasionally old people with a few milk cows are left behind in the main dry season boma. Under the present conditions in Western Masailand we saw very few large bomas that were 342 not located at permanent water. It may be that increases 343 in stock, or decreases in available water, or some other *233

The villages, *eng ang*, pl. *ing angite*, is the minimal territorial unit. Villages are distributed within the minor sections. JOHNSTON,[15] had already noted that "they generally range within certain districts". A village is the residence of one or more elders with his or their wives and cattle. A man after his marriage does not live in the same village as his father, unless the latter has become senile and unable to cater for himself. 621 [591] [888]

The internal structure of the village is based on the gatesystem. This consists in a proper arrangement of the house on the sides of the village's gates. The village consists of a large yard enclosed by a thorny fence with gates opening at opposite sides. The house are built on the right and left sides of each gate, every gate with its houses belonging to a single elder. The usual arrangement is as follows: the first house on the gate's right is the dwelling of the owner's first wife; the first house on the left side is that of his second wife; the second house on the right side is that of his third wife; and the same alternating order is followed if marries more wives. The central yard is reserved for cattle. The elder's cattle are allotted to each of his wives according to her rank in the house. Cattle in possession of one side of the gate cannot be inherited by the other side. When inheritance takes place it is with great care that one tries to avoid cattle interchange.[16] The gate system, observes FOSBROOKE,[17] is an ideal, and "a symmetrically arranged gate is seldom found in practice". When people move in search of better grassland, the village is not destroyed, but simply evacuated. During the owner's absence the houses may be occupied by other temporary tenants. At the reverse migration the owner comes back to his old village if this is not irreparably decayed, and it is agreed by custom that any foreigner who might have found shelter in the house must vacate the place to the original owner. 621 361 [428] [166]

Another type of Masai village should be mentioned here. It is 621

561 624 and the candidates have previously agreed on the person to be appointed, and the matter is also discussed with the prophet (*laibon*). As in previous cases, these transactions are kept secret because the office is not popular, and the selected man and his family would avoid the election. Only a popular man and a " pure Masai " distinguished for his physical strength, may be appointed *aunoni*. Generally the *aigwenan* is not elected, but in some cases he may be. [95]

561 624 888 According to MERKER, p. 72, on the day of his official appointment, the selected man is seized and forced to sit on a stool in the centre of the *singira*. He is then clothed wit elders' garments and decorations. FOSBROOKE, [96] states that soon after his appointment he will be given a wife and cattle by his age-mates.

The unpopularity of the office seems to derive from the fact that the elected man must settle down and behave as an old man as to the peculiar nature of the office. This is described by FOSBROOKE, [97] and his description sums up the descriptions and statements of all other authorities. [98] " The duties of the position (of the *aunoni*) are obscure, but as far as is known the *launon* appears to be a sort of scapegoat for the age (unit). If he flourishes and begets many children, and if his cattle prosper and increase, it is a bad omen for the rest of the age (unit). But his adversity will indicate the age (unit)'s prosperity. He must do everything in advance of his age-mates, marry, settle down, make the final payment that binds the marriage. It is as though the *moran* standing on the brink of elderhood, send forth the *launon* as an explorer into the unknown country, so that any bad luck which may be awaiting them shall be focussed on one individual and not on the whole age (unit). But the *launon* is held in great respect by his age-mates, and any demands that he makes must be fulfilled. It is stated that he is the only official whose order must be obeyed. In discussing this with an elder, I pointed out that this should give the office

561 624

[95] *MS.* 48, p. 4.

[96] FOSBROOKE, *l. c.*, p. 39.

[97] FOSBROOKE, *l. c.*, pp. 39 s.

[98] While on p. 29 FOSBROOKE states: *Unoto* " is performed by sections or groups of sections. The Kissongo traditionally perform the ceremony at Mugulat near Musa, i. e., on the eastern slopes of Mondul Mountain, actually in the Arusha district. As many as possible of the age attend, but by no means all ". On p. 36 he writes that " all sections and areas meet together for the *unoto* ceremony ". Evidently this statement must be qualified by what he says above.

In the first descending generation, the word *en-kerai*, "child," may be applied to son, daughter, brother's son and daughter, and father's brother's son's son and daughter, or they may be distinguished as masc. *ol-ayioni*, "boy," and fem. *en-tito*, "girl." Father's brother's daughter's son is *ol-aputani*, and father's brother's daughter's daughter *en-e-sotua*, the latter term applying also to father's sister's daughter's daughter, and mother's sister's son's daughter. The term *o-le-sotua* is applied to the mother's brother's daughter's son, mother's sister's son's son, mother's sister's daughter's son, and father's sister's daughter's son. *O-le-nk-apu* is applied to the sons of father's sister's son and mother's brother's son, and *en-e-nk-apu* to their daughters. In this generation there are no terms for mother's brother's daughter's daughter, and mother's sister's daughter's daughter. 601

In the second descending generation, *ol-akui* includes the sons of a man's own son and daughter, brother's son, father's brother's son's son, father's brother's son's daughter; while *enk-akui* is applied to their daughters. Father's brother's daughter's son's son is *ol-aputani*, and the daughter is *en-e-sotua*. The term *o-le-nk-apu* covers son's son, and the sons of sister's son, father's sister's son's son, and mother's brother's son's son; their daughters are *en-e-nk-apu*. *O-le-sotua* includes the sons of sister's daughter, father's brother's daughter's daughter, father's sister's daughter's son, father's sister's son's daughter, mother's brother's son's daughter, mother's brother's daughter's son, mother's sister's son's son, mother's sister's son's daughter, and mother's sister's daughter's son; *en-e-nk-apu* is applied to the daughters. There are no terms for mother's brother's daughter's daughter's son and daughter, or for mother's sister's daughter's daughter's son and daughter.

Among affines, the term *ol-aputani* is applied to wife's father, wife's father's brother, and wife's brother, but their wives are *enk-aputani*, *en-e-sotua*, and *en-e-sotua* respectively. Son and grandson of wife's brother are also *ol-aputani*. Wife's sister is *e-sindani e-anyit*, and all children and grandchildren of wife's brother and sister (except wife's brother's son and grandson) are *-e-sotua*. The majority of affinal terms are in fact of the *-e-sotua* category. Husband is *ol-moruo* or *ol-payian*, wife *e-yorovioni* or *en-kitok;* junior wife is *enk-aini*.

These kinship terms, however, are not very much used, for it is the custom of the Masai to call each other by cattle-names: members of a domestic group give each other cattle on various occasions, and thereafter the word denoting the kind of animal given is used as the equivalent of a reciprocal relative term; the animal name is prefixed by *pa*, meaning "giver or receiver of." Thus, a father usually gives his son a bull when he is about 10 years old, and they then call each other *pa-oiyoni*, "giver (receiver) of a bull" instead of *papa* and *li-ayioni*. An elder brother will give a younger brother a heifer, and they will then be *pa-n-tawuo* (heifer) to each other. Paternal cousins often call each other *pa-meregesh* (ram). 551

Among these relatives, the mother's brother has great power and influence over his sister's son. He can give him orders, which must be obeyed, and he may take what he wants from his nephew, who has also the right to take what he wants from his uncle. Refusal to obey the mother's brother can be punished by cursing, but this is not reciprocal. Behaviour patterns are based on seniority and the claims of kinship, and are expressed in the avoidance of bad language and unseemly actions, and the observance of formality between certain persons. There is avoidance between a man and his wife's mother, and between a man and his full brother's wife, though not between him and his half-brother's wife. The formality of greetings helps to preserve the respect for elderhood. 604 602 606 607 888

Pre-marital Sex-life

A man's sex-life begins when he has been circumcised; a girl's when she reaches puberty. Pre-marital relations are more formalized than among the Nandi, since the unmarried warriors of a local company, *sirit*, live in a barrack, *e-manyata*, with their mothers, some of their sisters, and their girl lovers, *e-sanca*, each man having his own lover. The rules which regulate marriage apply in the selection of a lover. 836

593 concerned. One who is expelled from the family because of bad behavior is, as a rule, taken in again upon payment of a head of cattle or a goat. Moreover he hands over the animal to a man friendly to his lineage. The latter takes it to the father of the one expelled and requests reacceptance for him. If it is refused, the one expelled seeks and finds acceptance in the same manner as the detached one. Detachment and expulsion occur only in very
